Imports are an indication of purchasing power in Canada and are especially influenced by the expansion or contraction of capital expenditures within Canada. The increase, therefore, of 8.1 p.c. in the volume and 7.7 p.c. in the value of imports reflects a recovery in purchasing power in Canada and probably some slight expansion in capital expenditures which were almost completely suspended during the worst years of the depression. It may be noted in Statement II that imports of iron and non-ferrous metal products, the groups chiefly influenced by capital expenditures, were much higher in 1936 than in 1933, though still much below those of the fiscal year 1927, chosen because it approximates to the calendar year 1926 taken as a representative year of the post-war prosperity period. Similarly in 1935 and 1936 imports have increased from the United States which is the chief external source for machinery and other durable goods and materials.

Exports represent the sale in world markets of surplus products of Canadian farms, mines, forests, fisheries, and factories and, when there is a ready sale for such products at prices profitable to the producer, large exports result in prosperity in Canada. In the year 1936 exports increased in volume by 7.0 p.c., while higher prices accounted for an increase of about 5.2 p.c. in the value of exports, so that Canadian goods were sold abroad not only in larger volume but also at more profitable prices. (See Subsection 10, pp. 578-581, for a comparison of volume and value.) The figures of exports shown in Statement II indicate that a shift is taking place in the importance of groups in the composition of our exports. In the prosperity period, 1925-29, Canadian exports were predominantly agricultural. Indeed in that period it was largely because bountiful harvests coincided with an active world demand at good prices that prosperity was widespread in Canada. In 1927 the two groups, vegetable and animal products, made up 59 p.c. of our exports, while non-ferrous metals constituted only 6.4 p.c. In 1936, on the other hand, vegetable and animal products made up only 41 p.c. of exports, but non-ferrous metals (including gold) increased to 25 p.c. This is very suggestive of the part which the mining and exporting of non-ferrous metals (including gold) are playing in the current economic recovery of Canada.

II.—SUMMARY OF THE TRADE OF CANADA BY MAIN GROUPS, FISCAL YEARS ENDED

¹ Revised since the publication of the 1936 Year Book.

Statistical Tables of Current Trade.—Tables 10 to 18 (pp. 532-573) deal with the current trade statistics of the Dominion. Tables 10 and 11 are summary tables, showing by groups our trade with the United Kingdom, the United States and all countries, by values and percentages, for the latest four fiscal years. Table 12 shows the same in detail for exports and Table 13 for imports of all important commodities. Table 14 shows by main classes imports as dutiable or free and exports as of Canadian or foreign produce for the five fiscal years 1932-36. Table 15 shows imports and exports for the fiscal year ended 1936 by degree of manufacture and by origin, and Table 16 gives similar information on a classification according to purpose. Table 17 gives our imports and exports for the two latest years by ports and provinces, and Table 18 shows the values imported from different countries dutiable or free under the general, preferential, and treaty rate tariffs in 1936.

Subsection 4.—Trade with the United Kingdom and the British Empire.

Ever since Confederation the external trade of Canada has been carried on predominantly with one or other of the two great English-speaking countries, the United Kingdom and the United States. In the early years of the Dominion, the United Kingdom, which was then lending us capital on a considerable scale for those times, supplied more than half our imports, though as a customer she came second to the United States. Later on, however, partly as the result of the free trade policy of the United Kingdom and the protectionist policy of the United States, the United Kingdom became the chief market for our exports, holding that position steadily from 1890 to 1920, while in certain of the more recent years the United States has been our largest customer.

As regards our imports, on the other hand, the United States, though in the beginning ranking second in supplying our wants, took first place as early as 1876 and has maintained that position steadily since about 1883, the proximity of the two countries and the increasing population on both sides of the line being largely responsible. During the Great War, when the resources of the United Kingdom were absorbed in the struggle, the percentage of Canada's imports coming from the United States rose as high as 82.3 p.c. in 1918. From 1921 to 1930 it remained fairly constant at about two-thirds, while in recent years it has declined and was 56.8 p.c. in 1936. Our imports from the United Kingdom, which fell as low as 8.0 p.c. of the total in 1919, fluctuated between 15.2 p.c. and 19.0 p.c. between 1921 and 1930, but have been somewhat higher since then and stood at 21.0 p.c. in 1936. (See Tables 5 and 6 of this chapter.)

Statement II above shows our trade with the United Kingdom in three recent years compared with that in 1927 and 1914. It may be noted that in the latest years there has been a very great decline in imports of textiles, partially compensated by some increase in imports of iron, non-metallic mineral and chemical products. Vegetable and animal products continue to make up the major part of our exports to the United Kingdom, but there has been an actual and a great proportional increase in exports of wood and paper products and non-ferrous metals.

The commodities making up Canada's export and import trade with the United Kingdom in recent years are dealt with in summary form in Tables 10 and 11, and in detail in Tables 12 and 13 of this chapter.

Trade of Canada with the British Empire.—Canada was the first of the British Dominions to grant a preference on goods the produce and manufacture of the United Kingdom and reciprocating British Dominions and possessions. This preference was extended from time to time to other portions of the British Empire until now it is applicable to practically every British Dominion and possession. In the case of Newfoundland, in addition to the preference, Canada grants free admission to fish and fish products. The British West Indies receives special concessions under the Agreement of 1925 referred to on p. 489. Table 18 on p. 573 shows for the latest fiscal year the imports from countries of the British Empire entering Canada either at lower rates of duty or free under the preferential tariff. The British preferential tariff enacted in 1897 has had the effect of stimulating Canada's Empire trade. When the British preference became effective in 1897, Canada's total imports from the United Kingdom amounted to only \$29,401,000, compared with imports in 1887 valued at \$44,741,000 and in 1873 at \$67,997,000, so that from 1873 to 1897 imports from the United Kingdom declined by \$38,596,000 or 56.7 p.c. After the introduction of the British preferential tariff, the downward

trend in the value of imports from the United Kingdom was reversed, although the proportion of our total imports coming from the United Kingdom continued to decline. Imports from other Empire countries which were insignificant before the beginning of the century have increased both in actual value and proportion of total imports. However, during the latest four years and especially since the Ottawa Agreements, the proportion of trade with both the United Kingdom and the total British Empire has shown an upward trend, although both the volume and direction of Canada's exports vary widely with the vicissitudes of crops here and in other parts of the world. Canada's exports to Empire countries other than the United Kingdom consist very largely of manufactured products, while imports from those Empire countries are chiefly raw materials.

In the interpretation of statistics covering a long period, such as those in Statement III following, the wide fluctuations in price levels should be borne in mind. Thus the fiscal year 1896, just prior to the introduction of the British preference, marked about the close of a long period of declining prices which began in the '70's. Prices followed a rising trend from then to the last pre-war fiscal year 1914, and rose very steeply throughout the War to a peak in the fiscal year ended 1921. In the following year, prices suffered a sudden drop and then remained fairly steady until 1929, after which the recent serious decline has occurred. (See Chapter XX.) The trade of Canada with the British Empire in certain fiscal years since 1886 was as follows:—

III.—CANADA'S TRADE WITH THE BRITISH EMPIRE.

¹ Revised since the publication of the 1936 Year Book.

Canadian Preference on Imports from Empire Countries.—As indicated in the paragraph above dealing with trade with Empire countries, a declining trend in the imports from Empire countries down to 1897 was changed after the British preferential tariff of 1897 to a rising trend. Imports from the United Kingdom since 1868 are shown in Table 6. Table 8 shows the average *ad valorem* rates of duty collected on imports from the United Kingdom, the United States and all countries. This shows an appreciable drop in the rates of duty on imports from the United Kingdom after 1897. However, even after this, average rates of duty are shown in many years to be higher on both dutiable imports and total imports from the United Kingdom than from the United States in spite of the British preference being in effect. A number of factors explain this situation. Dutiable imports from the United Kingdom consist very largely of highly manufactured goods normally subject to high rates of duty, whereas dutiable imports from the United States include a large proportion of semi-manufactured goods for further processing in Canadian factories and such goods carry a reasonably low rate of duty. The United States is also the chief source of Canadian imports of raw materials free of duty. Furthermore, alcoholic beverages and manufactured tobaccos which are subject to very high duties are an important element of imports from the United Kingdom but are insignificant in imports from the United States. Finally, especially in recent years, there is a large range of imports which are free of duty under the British preference but are subject to moderate duties when coming from the United States. The values of such imports from Empire countries in the latest fiscal year are shown in Table 18. Imports from the United Kingdom which are free only under the preference tariff have increased from 0.6 p.c. in 1925 to 41.3 p.c. in 1936 of our total imports from that country. To make a fair comparison between the United Kingdom and the United States of the average rates of duty collected on ordinary dutiable imports, imports of alcoholic beverages and manufactured tobaccos should be eliminated, while imports free of duty under the British preference but dutiable when imported from the United States should be added to the dutiable imports from the United Kingdom. This is done in Statement IV which follows.

IV.—COMPARISON OF THE AVERAGE *AD VALOREM* RATES OF DUTY ON DUTIABLE IMPORTS FROM THE UNITED KINGDOM AND THE UNITED STATES WITH DUTIABLE IMPORTS OF ALCOHOLIC BEVERAGES AND TOBACCO ELIMINATED AND IMPORTS FREE OF DUTY UNDER THE BRITISH PREFERENCE ADDED TO DUTIABLE IMPORTS FROM THE UNITED KINGDOM, FISCAL YEARS 1922-36.

NOTE.—Figures in this statement do not include dumping and other special duties.

Fiscal Year.	United Kingdom.				United States.		Average <i>Ad Valorem</i> Rate on Dutiable Imports.

1934...	44,201,298	39,665,543	83,866,841	10,046,378	139,882,492	39,924,268	11.97	28.54
1935...	46,072,232	41,468,717	87,540,949	10,534,028	181,095,348	49,565,647	12.03	27.37
1936...	49,176,329	48,736,725	97,913,054	10,898,722	189,775,685	49,843,622	11.13	26.26

On this fair basis of comparison the average rate of duty on imports from the United Kingdom has been lower in every year shown here while the difference in favour of the United Kingdom has become 50 p.c. or more in the years since the Ottawa Agreements became effective.

Subsection 5.—Trade with the United States and Other Foreign Countries.

Trade with the United States.—In the period immediately following Confederation, the United States was Canada's chief customer, trade still following its accustomed channels in spite of the denunciation of the Reciprocity Treaty, which had expired on Mar. 17, 1866. On the other hand, we bought more from the United Kingdom than from the United States. (See Tables 5 and 6 for a record of trade with the United States since 1868.)

In the '70's, however, the proportion of our exports going to the United States, which had been over 50 p.c. in the first few years of the Dominion, declined materially, but for the most part remained at over 40 p.c. until after the enactment of the McKinley Tariff of 1890, when it fell to 35 p.c. in 1892 and as low as 27 p.c. in 1898. In the first decade of the twentieth century it averaged about 35 p.c., but fell off considerably in the war years. Since the War, the average has been about 40 p.c., although in 1933 under the influence of the depression and high tariffs in the United States the proportion dropped to 33 p.c. (See Statement V below.)

Imports from the United States exceeded half of our total imports for the first time in the years from 1877 to 1879, while in the eighteen-eighties they were approximately equivalent to those from the United Kingdom, at from 40 to 45 p.c. from either country. By 1896, however, imports from the United States again reached half of the total, and subsequently have never fallen below that point, increasing both absolutely and relatively during the great period of expansion until 1913, when they were 65.0 p.c. of all imports. In the extraordinary circumstances of the Great War they rose as high as 82.3 p.c. in 1918, and throughout the nineteen-twenties stood at about two-thirds of the total. They have declined to less than three-fifths of the total since 1932 as shown in Statement V below. The reduced demand for capital goods has been an important factor in recent years.

The commodities making up our export and import trade with the United States are shown in summary form in Tables 10 and 11 and in detail in Tables 12 and 13 of this chapter.

Trade with the United States by main groups of commodities for the three latest fiscal years compared with 1927 and 1914 is shown in Statement II (c), p. 506. Non-metallic minerals (chiefly coal and petroleum products) and chemicals are an increasingly important factor in imports from the United States, although iron products became again in 1935 the most important group and there are still large imports of textiles which include raw cotton and of vegetable products largely comprised of tropical or out-of-season fruits and vegetables. Aside from the effects of the Ottawa Agreements with their purpose of increasing intra-Empire trade and of the at-times heavy discount against Canadian funds in the United States, a factor in the fluctuation of the United States' share in our imports which should not be overlooked is the influence of capital expenditure in Canada. The United States is the principal external source for machinery, equipment and structural materials. The almost complete cessation of capital expenditures in the depression therefore affected imports from the United States more than from any other country.

Another important factor influencing imports from the United States is Canadian purchasing power which is very directly affected by exports to the United States. These were seriously curtailed by the very high rates on many important Canadian products introduced by the Hawley-Smoot tariff of June, 1930, and thereafter imports from the United States showed a greater decline than Canadian exports to that country. (See the 1936 Year Book, p. 508.)

The effect of the Trade Agreement with the United States which became effective on Jan. 1, 1936, is indicated by the following figures:—

Item.	Twelve Months Ended Dec. 31—		Increase or Decrease.	
	1935.	1936.		
	\$'000	\$'000	\$'000	p.c.
Imports from United States.....	312,417	369,857	57,440	18·7
Totals, domestic exports to United States.....	358,570	406,665	48,095	13·4
Less exports of non-monetary gold.....	95,990	71,489	24,501	-25·5
Exports merchandise other than gold.....	262,580	335,176	72,596	27·6

The influence of the economic recovery in both Canada and the United States should not be overlooked as a factor in the above increases of trade. However, the Trade Agreement has undoubtedly been of great benefit to producers of live stock and lumber in Canada and, in a less degree, to many other classes.

Canadian Trade via the United States.—Imports from overseas countries *via* the United States have steadily declined in recent years, especially those from the British Empire. This decrease has followed: (1) general propaganda to utilize Canadian sea and river ports; (2) additional concessions to goods imported under the preferential tariff if they come direct. Provision has been made, in trade treaties and agreements negotiated with foreign countries, that goods must be imported *via* a Canadian sea or river port in order to obtain the full benefits of special rates of duty. Between 1920 and 1936 imports *via* the United States have decreased from 9·5 p.c. to 2·58 p.c. of the total imports from overseas countries.

The proportion of exports from Canada to overseas countries going *via* the United States shows a considerable decline since 1927, the percentages by fiscal years being: 1927, 39·4; 1928, 38·7; 1929, 36·6; 1930, 33·7; 1931, 27·3; 1932, 18·7; 1933, 14·2; 1934, 14·4; 1935, 17·3; 1936, 18·4. An important factor in the decline for recent years has been the requirement of direct shipment for goods to qualify under the Empire preferences introduced in Britain. Details by countries are given in Table 21 of this chapter.

Trade with Other Foreign Countries.—The relative changes in the positions occupied by the United States and other foreign countries in Canada's trade in various years from 1886 to 1936 are shown in Statement V below. During the War and the years immediately following, when production and exports by many European countries were curtailed, imports from the United States rose to a high proportion and were 69 p.c. in 1921, while those from other foreign countries declined. With this exception the proportion of imports from other foreign countries has remained surprisingly constant over the period of nearly half a century at about one-tenth to one-eighth of total imports. Canadian exports to the United States have fluctuated between 30 p.c. and 46 p.c. of the total, while those to other foreign countries increased from 4·5 p.c. to as high as 24·0 p.c. in 1929; they declined to 10·5 p.c. in 1936.

¹ Revised since the publication of the 1936 Year Book.

With further reference to the trade of Canada with countries other than the United Kingdom and the United States, attention is directed to Tables 8 to 39 (pp. 122-162) of the Condensed Preliminary Report on the Trade of Canada, 1936, published by the Dominion Bureau of Statistics. These tables show the trade of Canada in leading commodities with 96 British and foreign countries for the fiscal years 1935 and 1936.

Subsection 6.—Geographical Distribution of Canadian Trade by Continents and Countries.

Canadian Trade by Continents, 1936.—In the latest fiscal year exports increased substantially to both the United Kingdom and the United States, so that these two countries together took over three-quarters of our total exports. There were also increased exports in 1936 to South America, Oceania, and Africa, exports to the two last-mentioned regions rising to a greater proportion of total exports than in any of the other five years shown, largely owing to exports to the other leading British Dominions. On the other hand, exports to "Other Europe" and "Other North America" continued to decline and represented a smaller proportion of total exports than in any of the other years shown. In imports there were increases from

all the geographic divisions shown, except "Other North America." The proportion of imports coming from Asia has shown a continuous upward trend over the six years, and the proportion from the United Kingdom is higher now than six years ago. The proportion from "Other Europe", on the other hand, is lower than at any other time in the six years.

Imports from Principal Countries.—The following statement on imports from twelve leading countries shows how predominant the two great English-speaking countries are as the source of supply of Canadian imports, the United States supplying approximately 57 p.c. of all our imports in 1935, while the United Kingdom, with less than half the share of the United States in our import trade, has, nevertheless, more than ten times as large a share as Germany, ranking third. Imports from France show a declining trend both in actual value and in percentage of the total, so much so, that, although in 1932 France ranked third, in 1936 France was down to seventh place. The British Straits Settlements, on the other hand, have risen from thirty-ninth place in 1933 to sixth in 1936. The following statement outlines the imports from twelve leading countries, while in Table 19 of this chapter actual figures will be found showing imports from all important countries of the world in each of the last five fiscal years.

Exports to Principal Countries.—Percentages in the following statement, as in the import statement, are indicative of the predominance of the United Kingdom and the United States as our customers. The third country, Australia, in 1936, took from us only about 7 p.c. of the commodities taken by the United States. It may be noted that Belgium and the Netherlands were our best customers on the continent of Europe, surpassing France and Germany in this respect. The relative positions of these countries are in some measure due to the attitudes taken by them to imports of Canadian wheat. In the Orient, Japan retained fourth place in 1936. Among Empire countries the increasing proportions of our exports going to Australia and British South Africa are of special significance. Table 20 of this chapter gives actual figures of Canadian exports to all important British and foreign countries for the latest five fiscal years.

Subsection 7.—Principal Commodities Imported and Exported.

The commodities which make up Canada's external trade are shown in detail for the four latest fiscal years in Tables 12, dealing with exports, and 13, with imports.

Canada's Principal Imports.—Statement IX, which follows, shows the long-term trend of principal commodities imported into Canada in the fiscal years 1890, 1900, 1910, 1920, 1930, and 1936. In the interpretation of the trends in imports, shown in this statement, the effects of price changes and of fluctuations of the so-called business cycle should be kept in mind. Thus the Bureau of Statistics' index number of wholesale prices on the 1926 base was 59.3 in the calendar year 1889, 52.1 in 1899, 59.5 in 1909, 134.0 in 1919, 95.6 in 1929, and 72.1 in 1935, these calendar years approximating to the fiscal years ended 1890, 1900, 1910, 1920, 1930, and 1936. In the matter of business fluctuations, the fiscal year 1910 was influenced by the general development boom in Western Canada, 1920 was affected by the feverish activity which immediately followed the War, 1930 represented the end of the security inflation period and the beginning of the downturn, while in 1936 the effects of the depression and price decline were still being felt, although there was a distinct improvement as compared with 1933 and 1934.

During the period of 46 years covered by the statement, great changes have occurred in the character of the leading imports, due to developments both in the industrial organization of the country and the goods consumed by the people. Thus in 1890, many present-day leading imports such as crude petroleum, automobiles and parts, artificial silk, electric apparatus, aluminium, were either non-existent or formed very insignificant items of trade. Imports of farm implements in 1890 were valued at only \$161,000 but, due to the tremendous agricultural expansion in Canada since that time, as well as to increasing mechanization of agricultural operations, imports of farm implements have grown to a large item in spite of the wide development of their manufacture within the country. On the other hand, a number of the leading imports of 1890, such as woollen goods and raw wool, sugar and products, silk goods, tea, grain products, and meats, have become relatively much less important as imports. Then again, there were certain leading imports in 1890, such as coal, rolling-mill products, machinery, and fruits, which still remain among the chief items of imports owing to the absence of coal and high grade iron ore deposits in the central portion of Canada, where population and industry are chiefly concentrated, and to the demand for fruits which cannot be grown in Canada.

Owing to the industrial development of Canada since the beginning of the century, many of the leading imports are now raw materials required by Canadian industries. The quantities of a number of these raw materials imported in each year since 1911 are shown in Table 9.

Among the factors affecting short-term fluctuations of imports, in distinction from the long-term trends outlined above, probably the greatest is the so-called business cycle. In periods of booming business activity capital expenditures are high as are also expenditures upon luxuries. The decline in capital expenditures from 1930 to 1936 is illustrated by greatly decreased imports of machinery, rolling-mill products, electrical apparatus, farm implements, automobiles, unmanufactured wood, etc., while decreased consumption of luxuries is indicated by the drop in imports of alcoholic beverages, silk goods, furs, diamonds, musical instruments, etc.

Canada's Principal Exports.—Statement X, which follows, gives Canada's leading domestic exports for the fiscal years ended 1890, 1900, 1910, 1920, 1930, and 1936, arranged in descending order of importance in 1936. In the interpretation of these figures of the main commodities exported, the same qualifications should apply regarding price changes and business fluctuations as cited above in the case of imports. Furthermore, since agriculture still constitutes the leading source of Canadian exports, variations in crop conditions here and in other parts of the world cause important fluctuations in the year to year volume and value of our exports.

Over the period of 46 years covered by the statement, the changes in Canada's exports have been very great, both in volume and in the relative importance of commodities. The great agricultural expansion of the Canadian West had scarcely begun in 1890. The leading exports then were sawmill and timber products, cheese, fish, cattle, barley, coal, and furs—indicating the large dependence of Canadian production at that time upon the eastern forests, mixed-farming areas, and fisheries. The five leading exports in 1936 were very unimportant in 1890. The year 1910 is the earliest year in the statement in which wheat appears as the leading export, although this first occurred in 1906. The rise of the great pulp and paper industry to a leading position has been still more recent, and similarly with regard to the production of non-ferrous metals, automobiles, and rubber tires. The export of non-monetary gold bullion has been of sufficient importance for separate classification only since 1926. On the other hand, exports of the products of mixed-farming operations, such as cattle, hides, cheese and butter, while showing wide fluctuations, have not expanded proportionately, and in some cases were very little or no greater in 1936 than in 1890. Much of the new agricultural area developed since 1890 has been better adapted to grain growing than to mixed-farming operations, so that, owing to the growth of population, the production of the older mixed-farming districts is to a larger extent consumed within the country. The rapid progress during the past two decades of the mining and metallurgical industries producing non-ferrous metals in Canada is illustrated in this statement by the increased importance since 1910 of exports of non-monetary gold, copper, nickel, silver, zinc, lead, aluminium, and platinum. The part played by these industries in supporting Canada's export trade has increased since 1930 with the curtailment of world trade in agricultural products. Indeed, in 1936, these great mining and metallurgical industries provided exports almost equal to those of agriculture and greater than those derived from the forest resources of Canada. In this connection mention should be made of the influence of low-cost hydro-electric power. The direct effect of Canada's resources of water power may be traced in the statement not only in the growth of exports of pulp and paper and of electrical energy but also

in those of the non-ferrous metals, since the economy of the mining operations is dependent in large measure upon cheap electric power and the same factor is very important in the metallurgical processes. Similarly, the exports of artificial abrasives and of certain chemicals such as fertilizers, sodium compounds, and acids are largely due to cheap hydro-electric power.

X—CANADA'S LEADING DOMESTIC EXPORTS, FISCAL YEARS 1890, 1900, 1910, 1920, 1930, AND 1936.

NOTE.—Commodities arranged in order of importance, 1936.

Subsection 8.—Proportions of Trade in Raw and Manufactured Products.

The stage attained in the industrial development of a country is indicated by the character of the goods it imports and exports. In the early years of Canada's development the imports were made up chiefly of manufactured products and the exports of raw and semi-manufactured products. Since the opening of the twentieth century this has been almost reversed, a large percentage of the imports consisting of raw and semi-manufactured products for use in Canadian manufacturing industries, and the exports consisting predominantly of products which have undergone some process of manufacture. In fact, the leading manufactures of Canada are for the processing of raw materials in the production of which Canada excels, and many of these processed domestic products are marketed abroad. Furthermore, as the population of the country grows, the range of elaborated goods formerly imported, which may be manufactured on a competitive basis of mass production within the country, expands, so that there are now many industries in Canada, serving the domestic and even foreign markets, using imported raw materials such as rubber, cotton, and sugar. Since the opening of the present century, Canada has passed through much the same stages of development in her economic life as did the United States during the last quarter of the nineteenth century, although the trend in Canada has been more pronounced in increasing the proportion of partly and fully manufactured goods as compared with raw materials exported, rather than in increasing the proportion of raw materials compared with that of partly and fully manufactured goods imported. Since 1929, the rapid decline in commodity prices, which has affected raw materials more than manufactured goods, has tended to increase the percentages on a value basis of both imports and exports of manufactures.

Statement XI shows how Canada's imports and exports, analysed into the three categories of raw materials, partly manufactured goods, and fully or chiefly manufactured goods, are distributed among the continents and leading countries of the world. The close of the analysis demonstrates that the imports into Canada from the British Empire, except the United Kingdom, consist chiefly of raw and semi-manufactured products, while the exports to "Other Empire" are made up mainly of fully manufactured products (85.8 p.c. in 1936).

In trade with industrialized continents, such as Europe and Asia, Canadian imports are largely manufactured goods and our exports raw materials or partly manufactured goods, while in trade with South America, Oceania, Africa and North America (if the United States be excluded) the situation is the reverse.

See also Table 15 of this chapter which shows the external trade classified by main groups according to origin and degree of manufacture.

XI.—CANADA'S IMPORTS AND EXPORTS, BY CONTINENTS AND LEADING COUNTRIES, ACCORDING TO DEGREE OF MANUFACTURE, YEAR ENDED MAR. 31, 1936.

¹ No record of 1919 imports and exports.² Due to the inclusion of non-monetary gold bullion, these figures have been revised since the publication of the 1936 Year Book (see p. 504).

4.—Duties Collected on Exports, 1868-92, and on Imports for Home Consumption, 1868-1935, with Percentages of Expense of Collection to Gross Customs Revenue Collected, fiscal years 1868-1936.

NOTE.—Duties on exports were not collected after the year 1892. The figures in this table are the gross figures of duties collected; the net national revenue from customs taxation, because of the drawbacks paid where commodities on which duties have been collected are afterwards exported in a more highly manufactured state, is considerably smaller. For net customs revenue, see statistics of revenue from customs duties, in the historical revenue table in Chapter XXI on Public Finance.

¹In this classification the expression "Canadian Farm Products" refers, in the case of exports, to commodities actually produced, in their original state, on Canadian farms. In the case of imports, it covers all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers, in both imports and exports, materials or commodities such as Canada does not produce in their original forms, e.g., cane sugar, tea, rubber, cotton, silk, etc.

17.—Values of Total Exports, Imports Entered for Consumption, and Duties Collected Thereon, at Certain Ports and by Provinces, fiscal years ended Mar. 31, 1935 and 1936.

NOTE.—The values of imports and exports at the several ports of entry given in the following table indicate that merchandise of the value stated was entered inwards, or passed outwards, at the ports mentioned, but it is not to be inferred that the imports were all for consumption at such ports or that the exports originated there.

Subsection 10.—Comparison of the Volume of Imports and Exports.*

The statistics of the external trade of Canada have not, until lately, been analysed in detail to reveal the physical volume of external trade as well as the dollar value of that trade, and have therefore been somewhat misleading when used to show the physical growth of production and external trade. When, for example, Table 1 of this chapter is examined, it seems to show stagnation in our external trade between the early 70's and the middle 90's of last century and a very rapid growth thereafter. Yet we know that the apparent stagnation was partly due to the fall in general prices between the '70's and the middle '90's, while the rapid growth of the later figures is exaggerated by the rise of prices after 1897, especially in the war period, 1914 to 1921. Since 1929 another precipitate decline in prices has exaggerated the actual decrease of trade. Thus the figures as published give us no true measure of the volume of our external trade, yet, of the commodities that satisfy human needs, it is the *volume* rather than the *value* with which the masses of the population are more intimately concerned. Volume is, from many points of view, a more important consideration than value, and it is desirable to secure a record of the fluctuations in the volume of the country's trade as distinguished from the value thereof. This objective is attempted with regard to world trade in Subsection 1 of this chapter in which the internationally familiar term "quantum" has the same significance as "volume" here. Table 22 which follows serves the same purpose with regard to Canadian external trade.

The method adopted for ascertaining the fluctuations in volume has been to take a base year—1926—and to revalue the quantities of each commodity imported or exported in any given year at the average import or export value of that commodity in the standard or base year. Where quantities are not available, the values of items are assumed to have moved in the same direction and in the same proportions as closely related commodities. For this reason the results must not be regarded as of great precision but, since the value of goods not returned by quantity and of those not comparable over a limited series of years is small in comparison with the total trade, the amount of error introduced on their account is inconsiderable. By this method it is comparatively easy to compare the volume of the trade in a particular year with that in a recent year and the margin of error is fairly small. When, however, a comparison of the volume of trade in a particular year with that of a more remote year is undertaken, the margin of error is very much greater. Certain new commodities have come into existence in the course of the period, while the qualities of others have been materially changed; further, various new items have been added to the customs classifications, and it is not always possible to say just what customs items of 1936 correspond with those of 1914. For these reasons comparisons with the pre-war fiscal year ended 1914 have been discontinued since 1929. This comparison for 1929 and certain previous years appeared on pp. 581-583 of the 1930 Year Book.

In Table 22 the values and volumes of imports and exports respectively for the years 1931 to 1936 are compared with 1926, for the main groups, as follows: the imports and exports are first shown at the values at which the trade was recorded; the same imports and exports are then shown at the value they would have had if the average price or unit value had been the same in each year as it was in 1926. In other words, the figures on the basis of 1926 average values enable a comparison to be made of the imports or exports for the given years on the basis of variations

*Further information as to the methods adopted in making the following analyses will be found on p. 798 of the Annual Report on the Trade of Canada for the fiscal year ended Mar. 31, 1936, published by the Dominion Bureau of Statistics.

in quantity only, variations due to different prices having been eliminated. Index numbers of declared values, that is, the total declared values of the imports or exports in each year expressed as percentages of 1926, are then given. These are followed by the index numbers of average values, which show the prices at which goods were imported or exported in each year expressed as percentages of the prices in 1926. Finally, the index numbers of physical volume show the relative quantity of merchandise imported or exported in each year expressed as a percentage of the quantity of the same merchandise in 1926.

For an analysis in greater detail, dealing similarly with sub-groups imported and exported, the reader is referred to pp. 800-801 of the Annual Report on the Trade of Canada for 1936 published by the Dominion Bureau of Statistics.

The physical volume of imports has been fairly well maintained throughout the depression in those groups comprising goods which enter more or less directly into consumption, such as vegetable products and textiles, while the volumes of imported chemicals and non-metallic minerals (chiefly petroleum products and coal) have averaged higher than in 1926. On the other hand, the volume of imports of durable or capital goods, largely comprised within the iron, non-ferrous metal and wood products groups, was at a very low level in 1933 and 1934 but has shown an encouraging tendency to recover since then.

In the latter half of Table 22, dealing with exports, the part which non-ferrous metals (including gold*) have played in maintaining Canadian production and exports throughout the depression is very strikingly shown. Exports of wood and paper have been showing healthy recovery since 1933 and in the latest year the volume was well above the base year, 1926. Agricultural products (chiefly grains) were still only about two-thirds the volume of those of 1926 but showed a change to an upward trend in 1936. Exports of animal products reached their lowest volume in 1931 and the recovery of this group has advanced somewhat further than that of agricultural products. Large increases are shown in exports of chemicals and textiles but these are small groups and have less significance for Canadian economy than the large groups mentioned above.

*See p. 504 regarding a recent change in the treatment of exports of refined gold from Canadian mines.

Section 4.—The Tourist Trade of Canada.*

Tourist Expenditures in Canada.—In recent years the tourist trade has become an important source of revenue in certain sections of the Dominion, materially affecting the balance of trade. It represents the economic disposition of national assets in which Canada is particularly rich, namely: its picturesque scenery; its invigorating climate; its opportunities for hunting, fishing, and boating, as well as for winter sports—for the exploitation of which a considerable capital expenditure has been made on hotel accommodation, improved highways and other attractions. Those entering from the United States in automobiles are by far the most important class of tourists. The business accruing to the Dominion in this manner represents some return for expenditures on highways which have been very large in the period since the War. In order to attract this traffic, highways have been built through regions of picturesque scenery, such as the Rocky Mountains, northern Ontario, and the Laurentians and Gaspé in Quebec. A further asset for Canada arises from the fact that these scenic regions with their invigorating climate are at their best in the summer holiday season when motorists are most ready to travel. The expenditure of travellers coming to Canada from other countries on business has the same effect, in so far as its influence on the balance of trade is

*Abridged from "The Tourist Trade in Canada, 1920-26", and reports for each year from 1927 to 1936 inclusive, published by the Dominion Bureau of Statistics and obtainable on application. These reports contain a full explanation of the methods used in making the estimates.

concerned, as the export of additional commodities would have. Indeed, in so far as commodities are sold to tourists travelling in the Dominion, our exportable surplus of such commodities is reduced.

It is impossible to obtain a direct record of expenditures of this kind. Moreover, even a rough estimate of the total is extremely difficult to make, visitors to Canada being of all classes, engaging in widely different activities or forms of recreation, remaining for varying periods, with expenditures undoubtedly ranging from very small to very large amounts.

Tourists who enter Canada may be divided into two broad classes: (1) those coming in *via* ocean ports; (2) those entering from the United States, the latter subdivided into entries by (a) automobile, (b) rail or steamer, (c) other modes of travel as bus, aeroplane, ferry, etc. In 1936 these classes are estimated to have expended in Canada (1) \$10,446,000, and (2) \$245,317,000, respectively, with entries under (a), \$159,473,000, (b) \$64,844,000, and (c) \$21,000,000.

The Department of National Revenue records the number of tourists entering Canada in automobiles from the United States through each of the ports of entry along the border. Estimates of the expenditures of tourists of this class in 1936, according to the provinces by which they entered, are as follows: Maritime Provinces, \$9,948,000; Quebec, \$33,163,000; Ontario, \$101,678,000; Manitoba, \$1,999,000; Saskatchewan, \$959,000; Alberta, \$1,039,000; and British Columbia, \$10,687,000.

Expenditures of Canadian Tourists Abroad.—Canadian tourists visiting other countries travel in the main to the British Isles and other European countries on visits home, or as sightseers. Again, many of them, especially elderly or delicate persons, go to Florida, Bermuda or the West Indies. These tourists may be classified in the same way as those entering Canada. The total expenditures of such Canadian tourists to other countries were estimated in 1936 to be as follows: to overseas countries, \$18,336,000; to the United States by automobile, \$43,811,000; to the United States by rail or steamer, \$23,658,000; and to the United States by other modes of travel, \$14,000,000; a total of \$99,805,000.

Summary.—For the years 1924 to 1936 the total estimated expenditures of tourists from other countries in Canada, as compared with those of Canadian tourists in other countries, are given in Table 23.

³ Revised since publication of the 193

Until the depression made itself felt in 1930, there was a steady increase in the amounts spent both by tourists from other countries in Canada and by Canadians in other countries. During the years 1930-32 the tourist trade, in spite of successive declines, exhibited a surprising vitality as compared with the generally depressed state of trade and industry. In each of these years the expenditures of tourists in Canada (and in the latter two the balance after deducting the corresponding expenditures of Canadians in foreign countries) constituted an "invisible" export of greater value than any single commodity exported. A marked contraction in both volume of travel and tourist expenditures occurred in 1933 and conditions in 1934 were very little better. A pronounced improvement in tourist trade took place in 1935 and again in 1936.

Section 5.—Balance of International Payments, 1920-36.*

"Balance of Trade" figures are frequently misinterpreted owing to the persistence of the doctrine long ago exploded that a nation's trade is necessarily in a healthy state when exports exceed imports, necessitating an import of gold to make up the difference. Trade was then said to show a "favourable" balance. This theory only took account of the "visible" or commodity items of trade, whereas the true balance of a nation's trade can only be known when not only the commodity items are considered, but also the "invisible" items such as interest, freight, immigrant remittances, financial services, tourist traffic, etc. In short, all debit and credit transactions must be set down in order to find out the true balance. If all the visible and invisible items are thus tabulated the debit or credit difference will be a final invisible item—capital import or export—and this will bring the nation's trade account into a state of balance.† Thus, the commodity trade balance of a country cannot be understood by itself but only as it is interpreted in the light of the invisible items of a country's international transactions. In the light of such data, it will be found that a so-called favourable or unfavourable balance will mean an entirely different thing at different times in a country's history. The balance of international payments, which takes account not only of commodity trade but of all transactions, reveals the meaning of the trade balance. It shows, for example, that in 1920, 1921 and 1922 our international accounts were balanced by large imports of capital, although our commodity trade balance was favourable in 1920 and 1922. During these years Britain repaid us war funds as follows: 1920, \$104,000,000; 1921, \$128,000,000; 1922, \$84,000,000. From 1923-28, however, the international accounts show a credit balance after allowing for interest payments and maturities, thus denoting capital exports. In these years Canada became temporarily a capital-exporting country and, therefore, the explanation of our favourable commodity trade balance was quite different from that for the period 1894 to 1903, when it was explained by payments of interest and maturities.

From the foregoing it will be seen that an estimated balance of international payments is indispensable to the understanding of trade accounts. It has, however, a great many other important uses, among which the following may be mentioned: (1) to give a comprehensive picture of our international debits and credits and how they are balanced; (2) to show the extent of our international borrowings and lendings; (3) to show the magnitude of individual invisible items, such as interest,

*Abridged from the annual report "Canada's Balance of International Payments", by Herbert Marshall, B.A., F.S.S., Chief of the Internal Trade Branch of the Dominion Bureau of Statistics. This report includes explanatory data on the methods followed in computing these statistics.

†It is impossible to obtain absolute completeness and accuracy in estimates of invisible items; hence, part of the difference will be due to errors and omissions.

freights, tourist traffic, etc., in our international transactions; (4) to explain exchange disturbances and the effect of international financial difficulties; and (5) to furnish data for guidance in the formulation of international fiscal, financial, and commercial policy.

As already stated, from 1923 to 1928 we had on balance an export of capital to our credit, though at the same time other countries, particularly the United States, continued to invest large sums in the Dominion. In contrast to this there were debit balances in 1929 and 1930, considering both visible and invisible items of \$107,000,000 and \$195,000,000, respectively, while in 1931 the balance was favourable by only a little over \$2,000,000. In the light of all available information, it appears that these balances in 1929 and 1930 represented a net movement of capital into Canada for investment. In each year from 1931 to 1935, a net outward movement of capital funds is indicated again. In these latter years, however, the outward movement of capital funds appears to have been in the main not for investment but for the purpose of retiring maturing issues and for repurchases. The credit balances from 1932 to 1936, respectively, were approximately \$27,000,000; \$55,000,000; \$81,000,000; \$169,000,000; and \$318,000,000.

Capital Movements in 1936.—The international trade in outstanding securities between Canada and other countries totalled \$818 million. This total trade was divided almost equally between sales and purchases. The sales of securities to investors in other countries were \$410.5 million, while purchases of securities abroad by residents of Canada were \$408.0 million. Most of these security transactions were between Canada and the United States, although transactions with Great Britain were a substantial part of the trade. Canadian purchases from the United States exceeded sales, whereas in the trade with Great Britain purchases by Canadians were exceeded by sales. Although most of these dealings were in Canadian securities, the volume of transactions in other securities was large, particularly in United States common and preference stocks.

In addition to this international trade in outstanding securities, there was the important retirement of \$255 million Canadian bonds and debentures held abroad. Part of these were refinanced at prevailing low interest rates by the receipt of \$110 million from the sale of new issues of Canadian bonds and debentures mostly in the United States. Besides these, there were sales of new issues of securities in the United States for the purpose of developing the operations of Canadian companies in the United States which have not been included in these totals.

These retirements effected a reduction of the indebtedness principally to the United States, of some Canadian governments and corporations. Refinancing of part of the retired issues by securities at lower interest rates will also reduce future annual service payments on Canada's foreign-owned bonded debt. This reduction in future payments of interest abroad constitutes a most important long-run consequence of the capital operations during 1936.

Table 24 shows the preliminary estimates of the balance of international payments for 1935 and 1936. Figures for 1920-26 were given at pp. 601-602 of the 1929 Year Book, although these have since been somewhat revised in later estimates. Figures for 1927-28 will be found at p. 501 of the 1932 Year Book, those for 1929-32 at p. 601 of the 1933 Year Book, those for 1933 at p. 639 of the 1934-35 Year Book, and those for 1934 at p. 605 of the 1936 Year Book.

24.—Estimated Balance of International Payments, 1935 and 1936.

NOTE.—If the estimates of the current and capital items below were absolutely correct and all inclusive, the balancing item of the current account and the balancing item of the capital account would be equal. The difference between these two amounts in the statement (\$152.2 million in 1935 and \$90.7 million in 1936) represents either errors in the computations or the omission of transactions which could not be traced at the time the tables were prepared. Figures for both years are preliminary.

CHAPTER XVII.—INTERNAL TRADE.

This treatment of trade within the Dominion commences with a general statement on interprovincial trade, followed by sections dealing with the statistics of the grain trade and of the marketing of live stock and animal products. Statistics of cold storage facilities and of commodities in cold storage are next in order. Following these will be found sections relating to various administrative services connected with trade, including: the payment of bounties; the granting of patents, copyrights and trade marks; and weights and measures, electricity and gas inspection. The concluding section of the chapter deals with the statistics of wholesale and retail merchandising collected at the Census of Merchandising and Service Establishments, 1931, and estimates made subsequently.

Section 1.—Interprovincial Trade.*

Canada may be divided into the following five economic regions, each deriving its specific character from the predominant occupations of its people:—

1. *The Eastern Fishing, Lumbering, and Mining Region*, comprising the river valley and gulf of the St. Lawrence, together with the Atlantic coast; in other words, the greater part of the Maritime Provinces, the northern part of the province of Quebec (excluding the former district of Ungava), and a portion of northern Ontario.

2. *The Eastern Agricultural and Industrial Region*, comprising the cultivated portions of the Maritime Provinces and of the provinces of Quebec and Ontario. In the latter provinces the cultivated areas extend along the banks of the St. Lawrence and its tributaries.

3. *The Central Agricultural Region*, extending from the Red River valley to the Rocky mountains and from the Canada-United States boundary to about 56° N. lat.

4. *The Western Fishing, Mining, and Lumbering Region*, comprising the western portion of the province of Alberta, the whole of British Columbia and the southern portion of Yukon.

5. *The Northern Fishing and Hunting Region*, extending from the regions of permanent settlement northwards, and from the boundary of Labrador to the Pacific and to the Alaskan Boundary. This vast region is sparsely inhabited by indigenous nomadic tribes engaged in fishing and hunting for their own support or for exchange with the fur-trading companies, and with individual whalers and traders who visit the region.

Great differences exist between the products of these various regions; even the fisheries and lumber products of the east are quite distinct from those of British Columbia. The needs of the people throughout the country are met to a great extent by the exchange of the products of one region for those of another.

Interprovincial trade in what is now Canada had its beginning, many years before Confederation, in the exchange of the furs and lumber products of Upper and Lower Canada for the fisheries and mineral products of the Maritimes. Although a large part of British Columbia lumber, minerals, fish, and fruits, Prairie Provinces agricultural products, Ontario minerals, Quebec wood pulp, paper, asbestos,

* Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch, Dominion Bureau of Statistics.

and Maritime Provinces lumber, potatoes, fruit, and fish are exported to foreign countries and the central manufacturing provinces import the greater part of their coal, there is a large trade of manufactured and raw materials between the economic regions of the Dominion. This trade is carried principally on the railways and, to a lesser extent, on the St. Lawrence river and Great Lakes and in late years an increasing amount is being carried by motor trucks.

Monthly railway traffic reports and an annual summary report are published by the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics showing, for each province and for the Dominion as a whole, the total revenue freight traffic of all railways, divided into 76 classes of commodities. The data also show the quantity of each class that originated and terminated in each province, and are of use in computing the net imports and exports of each province for each of the 76 classes of commodities. These statistics show rail traffic only, a limitation which should be borne in mind in connection with the trade of provinces having water transportation. Summary figures for all commodities are given in Table 1.

The revenue freight traffic movement on the steam railways of Canada fluctuates to a certain extent with the yield of the crops and with activity in the mining and construction industries involving heavy movements of low-grade freight. The general trend from 1921 to 1928 was upward, increasing from 83,814,436 tons of freight carried in 1921 to 119,227,758 tons in 1928. In 1929, however, a decrease to 114,600,778 tons was reported and, with the industrial depression, there were still greater decreases to 57,099,111 tons in 1933, but traffic began to improve during the last six months of 1933 and each month of 1934 showed increases over 1933 and the total for the year was 18 p.c. greater than for 1933. The same rate of improvement was not maintained during the first half of 1935 but the last six months, particularly October and December, showed substantial increases and the year ended 10 p.c. above the 1934 total. Each month in 1936 also recorded increases over 1935 and the total at the end of October was 8 p.c. above the corresponding total in 1935.

¹ The freight originating and that terminating will not agree because that which originates within a certain year does not all terminate within the same year. On the other hand, some which terminated in 1935, for instance, originated within the previous year.

Section 2.—Grain Trade Statistics.*

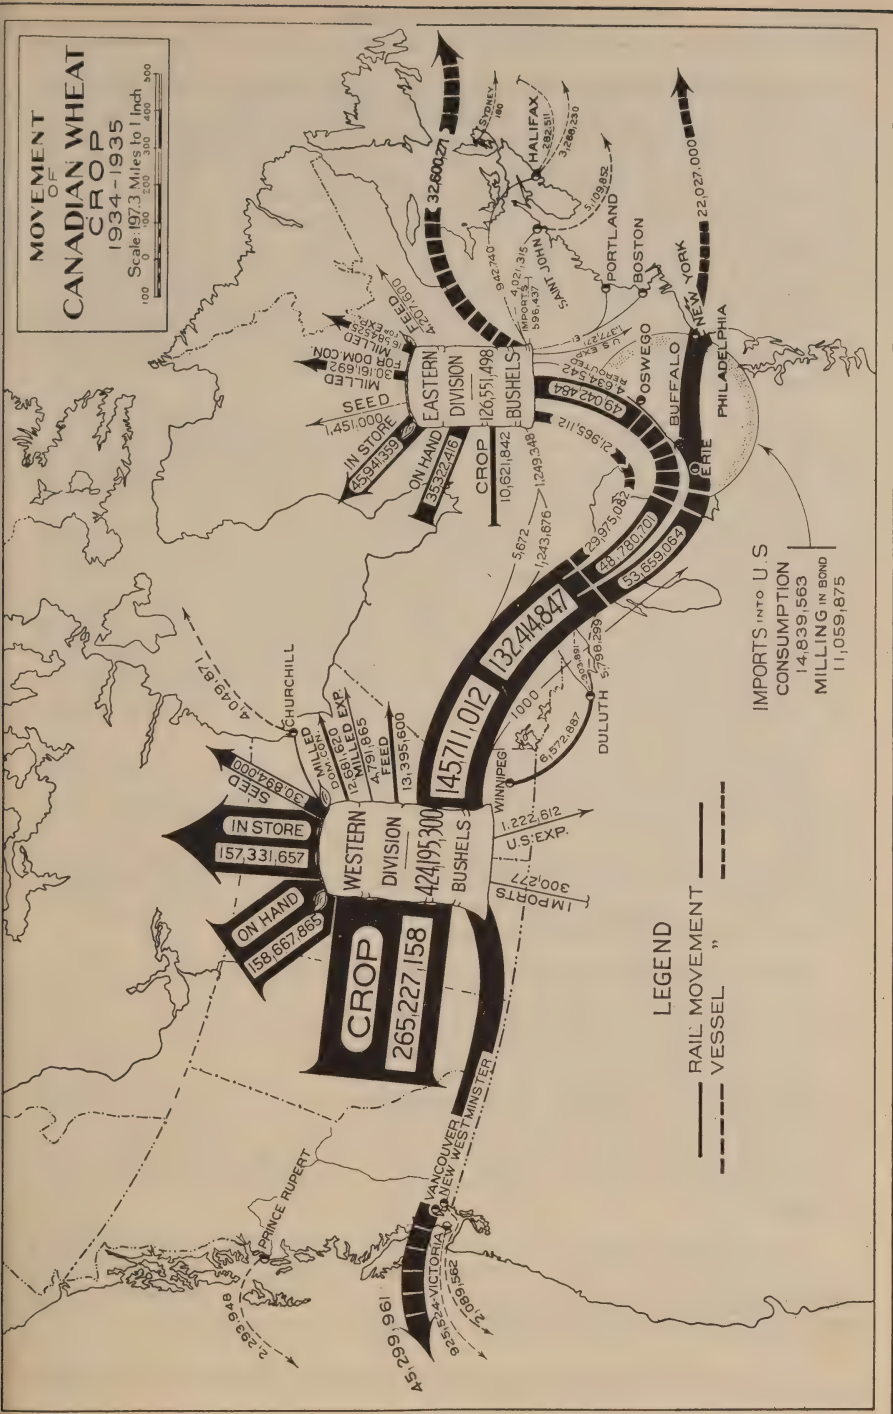

The Canada Year Book, 1922-23, contained on pp. 581-583 a historical summary of the more important points respecting the shipment, inspection and sale of Canadian grain under the Canada Grain Act, and an outline of the Canada Grain Act of 1925 appeared at p. 1017 of the 1925 Year Book. The 1929 amendments were dealt with at pp. 1047-1048 of the 1930 Year Book, and the Canada Grain Act, 1930, at p. 1101 of the 1931 Year Book.

Movement of Canadian Wheat, Crop Year 1935-36.—A résumé of the Canadian wheat movement naturally begins with a description of the crop of the Western Inspection Division. The wheat crop of 1935 marketed in the Western Division during the crop year from Aug. 1, 1935, to July 31, 1936, amounted to 265.5 million bushels. A carry-over of 157.3 million bushels from the previous crop year, together with some minor items, brought the stock of the Western Division to a total for the year of 423.1 million bushels. As for distribution, 261.2 million bushels were commercially disposed of, the chief items of which were 114.9 million bushels exported to the United Kingdom and 86.1 million bushels shipped to the Eastern Division. The direct exports to the United States were 26.3 million bushels and to other countries 16.0 million bushels. The total shipments from the Western Division were thus 243.4 million bushels. The wheat used by the milling companies for the manufacture of flour amounted to about 17.8 million bushels, of which 12.9 million bushels were ground into flour for domestic consumption. The all-rail movement eastward from the Western Division, including shipments to the Ogilvie Flour Mills Co. at Fort William for grindings, was 212.1 thousand bushels.

* Revised by Dr. T. W. Grindley, Chief, Agricultural Branch, Dominion Bureau of Statistics.

Scale: 197.3 Miles to 1 Inch

Scale: 197.3 Miles to 1 Inch

Lake shipments from Fort William and Port Arthur were 178.9 million bushels, 85.9 million bushels going to Canadian ports and 92.3 million to United States ports. The principal Canadian lake ports were those of lake Huron and Georgian bay, with receipts of 29.3 million bushels, and Port Colborne with 21.0 million bushels. Among the United States lake ports, Buffalo was of chief importance in the handling of Canadian wheat, with receipts by water from Port Arthur and Fort William of 74.0 million bushels. The export of wheat through Vancouver was 53.8 million bushels, as compared with 45.3 million in the previous crop year; 3.2 million bushels were exported through New Westminster, and 2.4 million from Churchill. The seed requirements were estimated at 32.1 million bushels, feed for live stock and poultry at 14.6 million bushels, and the stocks at the end of the crop year were 82.2 million bushels.

The Eastern Division received during the crop year not only the eastern crop, estimated at 16.3 million bushels, but also shipments from the West aggregating 86.1 million bushels. The quantity on hand at the beginning of the crop year was 45.9 million bushels, making, with a comparatively small importation from the United States, a total stock entering the Eastern Division of 148.4 million bushels. The distribution included 27.1 million bushels carried over in store into the following year, 57.2 million bushels exported from the St. Lawrence ports, and 12.8 million bushels shipped through the winter ports of Saint John and Halifax, while 2.7 million bushels moved over the border into the United States for consumption. In addition, 73.4 million bushels were cleared for export to the United Kingdom and other countries *via* the United States Atlantic ports. The chief ports concerned with the movement of Canadian grain from both Divisions were New York, Albany, Boston, and Portland.

Total exports from Canada to the United States for consumption amounted to 29.0 million bushels, to the United Kingdom 162.9 million bushels, to other countries 69.0 million bushels; 140.8 million bushels were shown to be shipped *via* Canadian ports and 62.1 million bushels *via* United States ports, after deducting 11.2 million bushels transhipped from Buffalo to Montreal and adding the same to the Canadian movement. Total exports of wheat from Canada during the crop year amounted to 232.0 million bushels.

Table 3 shows, for the licence years 1935 and 1936, the number of elevators and their total storage capacity, the figures being given by provinces for each class of elevator, with a summary showing the total of all elevators for each province. The growth of Canadian elevators in number and capacity has accompanied the expansion of grain acreage in the present century. Canadian elevators in 1901 numbered 426 with a capacity of 18,329,352 bushels; in 1911 these had increased to 1,909 elevators and 105,462,700 bushels; and totals of 3,855 elevators and 231,213,620 bushels were reached in 1921. Further increases in the past few years have resulted in a total of 5,856 elevators with a capacity of 421,855,620 bushels in 1936.

Table 4 gives a summary of the inspections of grain, 1933-36. Detailed statistics may be found in the Reports on the Grain Trade of Canada.* Tables 5 and 6 show the shipments of grain by vessel and rail for 1935 and 1936 and Tables 7 and 8 deal with the Canadian grain handled in recent years at Eastern elevators.

* The latest report is for the crop year ended July 31, 1935, and may be obtained from the Dominion Statistician.

Flour-Milling in 1935.—The flour- and grist-milling industry in Canada in 1935 showed a decrease of 183 mills from 1934, and their capacity was decreased by 864 barrels of flour a day from the 1934 figure. Capital investment was \$56,475,315. The mills were distributed by provinces as shown in Table 9. Statistics of the employees, value of products, etc., for both flour and feed mills, for the latest year available will be found in Table 7 of the chapter on manufactures, pp. 426-427 of this volume.

Section 3.—Marketing of Live Stock and Live-Stock Products.*

The estimated value of animals sold for meat in Canada in 1935 was \$120,078,000. In addition, the 1935 wool production was worth \$2,232,000 and the farm value of poultry and eggs produced was \$50,434,000. Live stock makes a very important contribution to farmers' income and also provides the basis for a large slaughtering and meat-packing industry in Canada. Since the War the slaughtering and meat-packing industry has been one of the most important single manufacturing industries in Canada.

¹ Figures for 1871-91 do not include work oxen.

² Census taken as of June 1, while previous censuses were taken in April, so that the proportion of young animals is greater than for years previous to 1911.

³ Animals slaughtered on farms were not included. The following figures are comparable with data given for other years, the amounts being partly estimated: cattle, 1,915,059; sheep, 1,097,015; swine, 4,282,624.

In Table 11 statistics are given showing the numbers of animals on farms for the years 1921 to 1936, expressed as percentages of the average numbers on farms during the period 1921 to 1925.

11.—Index Numbers of Animals on Farms in Canada, calendar years 1921-36.

(Average number for 1921-25=100.)

Live Stock Marketings, 1935.—The numbers of cattle and calves sold at stockyards showed increases in 1935 as compared with 1934, while hogs and sheep and lambs showed decreases. Cattle sold numbered 838,894 in 1935 and 700,817

* Revised by the Agricultural Branch, Dominion Bureau of Statistics. For more detailed information on this subject, see: Canada Year Book, 1922-23, pp. 594-595; Live Stock and Animal Products Statistics, published annually by the Dominion Bureau of Statistics; and The Annual Market Review, published annually by the Live Stock Branch of the Dominion Department of Agriculture. Statistics of live stock and poultry are given at pp. 249 to 253 of this volume.

in 1934, calves 409,074 and 371,110, hogs 832,949 and 964,311, and sheep and lambs 439,339 and 459,275, respectively.

Table 12 shows the receipts for sale at the various stockyards and a partial disposition of the live stock sold in 1934 and 1935.

¹ Included with cattle.

The interprovincial and export movement of live stock in 1935 shows increases in all classes except hogs. Total shipments in 1935 with comparative figures for 1934 in parentheses were as follows: cattle 584,642 (415,872); calves 191,128 (155,272); swine 891,266 (969,426); and sheep 249,451 (235,228).

The marketings of live stock through stockyards, by direct shipment to packers, or by export according to provinces of origin for the calendar year 1935 are given in Table 13. In Table 14 are given the statistics of the grading of animals from several provinces marketed through the stockyards in 1935.

¹ Including shipments direct to packers.

Slaughtering and Meat Packing.—This industry has become one of the most important branches of manufacturing in Canada. Its growth, shown by the statistics of Table 15, has been accompanied by a concentration of the major part of the production of the industry into a comparatively small number of large establishments, thereby facilitating the utilization of by-products and greater efficiency of operation. The large increase in the number of establishments in 1931 is due to the inclusion of wholesale butchers operating small plants engaged in slaughtering

only. The addition of these small establishments does not affect materially the value of production of the industry. The numbers of live stock slaughtered at Canadian inspected establishments in 1934 and 1935 are shown in Table 16.

Consumption of Animal Products.—The figures of Table 17 provide an indication of the standard of the diet of the people of Canada. Animal products such as meat, butter, and eggs are generally regarded as features of the diet of people with a high standard of living. In Canada there is a relatively high per capita consumption of beef, pork, butter, and eggs but a relatively low per capita consumption of mutton and lamb, and cheese. During the depression years, the per capita consumption of these products was not affected as much as might have been expected. Changes in the per capita consumption of various animal products occur as a result of changes in price relationships. These, in turn, are related to cycles of over-and-under-production particularly marked in the case of the meat products of hogs and cattle. Beef and pork, particularly, interchange in leadership as regards the amount consumed, according to the price relationships between them. In 1935, 66.18 pounds of beef were consumed per capita as compared with 62.01 pounds of pork. In 1933, pork consumption was 75.02 pounds per capita and beef consumption 55.50 pounds per capita.

Export and Import Trade in Live Stock and Live-Stock Products.—The exports of live stock and live-stock products from the Dominion to the United Kingdom, the United States, and all countries, are shown for the four fiscal years ended Mar. 31, 1933-36, in Table 12 of the chapter on External Trade, at pp. 536-539, and imports in Table 13 at pp. 550-553. Exports and imports by calendar years 1931-35, may be found at pp. 73, 75 and 76 of the report on "Live Stock and Animal Products Statistics, 1935". At pp. 76-98 of the report on "Trade of Canada (Imports for Consumption and Exports), Calendar Year 1935" figures are given of exports of "Animals and Animal Products" for 1934 and 1935 and imports of this class for the same calendar years will be found at pp. 219-243 of the same report.

Section 4.—Cold Storage.

Cold Storage Warehouses.—Under the Cold Storage Act, 1907 (6-7 Edw. VII, c. 6), now consolidated as c. 25, R.S.C., 1927, subsidies have been granted by the Dominion Government toward the construction and equipment of cold storage warehouses open to the public, the Act and regulations made thereunder being administered by the Department of Agriculture. Table 18 shows for 1936 the number of cold storage warehouses in Canada, with the refrigerated space.

18.—Cold Storage Warehouses in Canada, by Provinces, 1936.

NOTE.—The figures in this table were supplied through the courtesy of J. F. Singleton, Dairy and Cold Storage Commissioner, Dominion Department of Agriculture. Creameries with mechanical refrigeration are not now included although for years previous to 1936 they were considered as cold storage warehouses in these tables.

Cold Storage Stocks.—Statistics of the stocks of food in the cold storage warehouses of Canada are collected and published monthly by the Agricultural Branch of the Dominion Bureau of Statistics. A summary of cold storage reports is published annually as a separate statement and the same data are included in the report on "Live Stock and Animal Products Statistics", published annually. In Table 19 are included statistics by months, for 1935 and 1936, of the stocks of food in cold storage and in process of cure for various important commodities.

19.—Stocks of Food Commodities on Hand in Cold Storages and Dairy Factories, by Months, 1935 and 1936.

NOTE.—Figures in this table are of stocks on hand on the first of each month as published by the Agricultural Branch, Dominion Bureau of Statistics.

¹ Most of the figures for 1935 have been revised since the publication of the 1936 Year Book.

Section 5.—Bounties.*

In cases where it is considered advisable for the Government to encourage the production of a particular commodity, bounties paid by the Government are recognized substitutes for protective duties. In the past they have been made use of by Canada to a considerable degree, but the only bounties which involved payments in the past few years were those on copper bars and rods, hemp and bituminous coal mined in Canada and used in the manufacture of iron or steel. The Copper Bounty Act expired on June 30, 1931, and the Hemp Bounty Act expired on Dec. 31, 1932, and a statement of the bounties paid under these Acts was given on p. 662 of the 1934-35 Year Book. The bounty on bituminous coal was the outcome of a recommendation of the Royal Commission on Maritime Claims relating to the use of Canadian coal in the manufacture of iron and steel and the payments have been as follows:—

Paid in the fiscal year—

1930-31.....	273,148 tons at 49½c.....	\$ 135,209.23
1931-32.....	126,356 tons at 49½c.....	62,546.18
1932-33.....	118,783 tons at 49½c.....	58,797.54
1933-34.....	213,841 tons at 49½c.....	105,851.25
1934-35.....	336,849 tons at 49½c.....	166,740.02
1935-36.....	390,168 tons at 49½c.....	193,133.12
1936-37 to Sept. 30, 1936.....	241,372 tons at 49½c.....	119,479.10

Totals.....1,700,517 tons.....\$ 841,756.44

* Revised by L. T. Lett, Chief Accountant, Department of Trade and Commerce.

Bounties have been paid at various times in the past on iron and steel, on lead, on crude petroleum, on manila fibre, on zinc, and on linen yarns, but the bounties on iron and steel ceased in 1911, on lead in 1918, on zinc in 1921, on linen yarns in 1923 and on crude petroleum in 1927. The total amounts paid in bounties on these commodities between 1896 and the date of expiration were: iron and steel, and manufactures of (1896-1912), \$16,785,827 (Canada Year Book 1915, p. 460); lead (1899-1918), \$1,979,216 for 1,187,169,878 lb.; zinc, \$400,000; linen yarns, \$17,523; manila fibre (1903-13), \$367,962; crude petroleum (1905-27), \$3,457,173 on 233,135,217 gallons. (For quantities of crude petroleum and bounties paid in each year, see table on p. 635 of the 1927-28 Year Book.) Total payments for expired bounties between 1896 and 1932, including the \$611,763 paid on copper bars and rods and the \$26,847 for hemp, aggregated \$23,646,311, which, with the \$841,756 paid for coal, make a total of \$24,488,067. The Year Book of 1915, pp. 459-461, gave a description of the bounties that had been payable since 1883, as well as tables showing, for each commodity, the quantities on which bounties were annually paid and the amounts of such bounties for the years 1896 to 1915 inclusive. For details of the bounties on zinc, see p. 635 of the 1927-28 Year Book.

Section 6.—Patents, Copyrights and Trade Marks.*

Patents.—Letters patent, which in England have been in the gift of the Crown from the time of the Statute of Monopolies and earlier, are a purely statutory grant in Canada and have always been so. The earliest Act was one of Lower Canada, passed in 1824, wherein provision was made for the granting of patent rights to inventors who were British subjects and inhabitants of the province. Upper Canada passed its Act in 1826, and Nova Scotia and New Brunswick passed theirs at later dates. In 1849, after the Union, a consolidating Act was passed applying to both Upper and Lower Canada, and the B.N.A. Act assigned the granting of patents exclusively to the Parliament of Canada. The Dominion Patent Act of 1869 repealed the provincial Acts and has formed the basis of all succeeding Acts.

Letters patent are now issued subject to the provisions of c. 150, R.S.C., 1927 (as amended by c. 4, 1928, c. 34, 1930, c. 21, 1932, and c. 32, 1935), and application for protection relating to the same should be addressed to the Commissioner of Patents, Ottawa, Canada.

Invention means any new and useful art, process, machine, manufacture or composition of matter or any new and useful improvement in any art, process, machine, manufacture or composition of matter.

The growth of Canadian inventions is shown by the fact that the number of applications and total fees increased each year without a break from the beginning of the present century until the fiscal year ended Mar. 31, 1913, when 8,681 applications were received and the total fees amounted to \$218,125. In the fiscal year ended Mar. 31, 1936, there were 12,580 applications, with fees amounting to \$386,542, as shown in Table 21. Of the patents for 1936, 5,010 or 64 p.c. were issued to United States inventors, 792 to Canadians and 802 to residents of Great Britain and Ireland, while Germany with 482, France with 187, Holland with 87, and Sweden with 77 followed in the number of inventors to whom patents were issued. Applications for patents were distributed over the whole field of invention, but there was a notable increase in those related to the field of organic chemistry especially in connection with artificial resin dyes, chemicals for treating textiles, etc.

* Revised by J. T. Mitchell, Commissioner of Patents, Ottawa.

Copyrights and Trade Marks.—Registration of copyright is governed by c. 32, R.S.C., 1927, and applications for protection relating to same should be addressed to the Commissioner of Patents, Ottawa, Canada.

The Copyright Act of 1921 (amended in 1923 and consolidated in c. 32, R.S.C., 1927) sets out in Section 4 the qualifications for a copyright, and in Section 5 its duration: "Copyrights shall subsist in Canada . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the (Berne) Convention and the additional Protocol . . . or resident within His Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death".

Copyright protection is extended to records, perforated rolls, cinematographic films and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection throughout all parts of His Majesty's Dominions, foreign countries of the Copyright Union, and the United States of America, as well as in Canada.

The Trade Mark and Design Act (c. 201, R.S.C., 1927) was amended by c. 10 of the Statutes of 1928, bringing the Act into agreement with the terms of the Convention for the Protection of Industrial Property, as amended at The Hague in 1925 with regard to refusal to register certain trade marks. The renewal of expired trade mark registration was also provided for, while it was also enacted that in certain cases interested parties might apply to the Exchequer Court of Canada for the cancellation of a trade mark at any time within three years from its registration. The Unfair Competition Act, 1932, (22-23 Geo. V, c. 38), repealed all parts of the above Act relating to trade marks and all trade marks are now registered under and protected by the new Act.

Section 7.—Weights and Measures.*

The object of weights and measures administration is to maintain uniformity and accuracy in the use of the legal standards of the country in industry and commerce, to protect the public from short weight and measure and the trading community from unfair competition arising from such practices.

Prior to Confederation, the administration of weights and measures was in the hands of each Provincial Government but passed to the Dominion Government in 1867, under Section 91 of the British North America Act. Steps were then taken to simplify the standards in use and to establish uniformity throughout the Dominion.

What might be termed the principal Weights and Measures Act of Canada was passed in the session of 1872-73; its provisions closely followed English weights and measures law, but the system of weights and measures was greatly simplified. This Act established as the primary legal standards for Canada the imperial pound, gallon, and yard, but in place of the system of stones, quarters, hundredweights (112 lb.) and the long ton (2,240 lb.) it provided a decimal series of weights, 1, 2, 3, 5, 10, 20, 30, 50, 100 lb., and the short ton of 2,000 lb. The only exception to this was the continued use of the old French land measure, the arpent, in Quebec. The troy ounce of 480 grains and its decimal sub-multiples are the legal weights for the weighing of gold and precious metals. The metric system is legal for all transactions.

Many changes, deletions and additions have been made to the Act of 1873 by later legislation, but its principles remain unchanged. The latest legislation is the Weights and Measures Act (c. 212; R.S.C., 1927), as amended by c. 48, 1935.

The Weights and Measures Service was first administered by the Department of Inland Revenue, and offices were opened in all the principal centres of Canada

* Revised by E. O. Way, Director of Weights and Measures, Department of Trade and Commerce.

and equipped with standards and inspection equipment. In 1918 the Service was transferred to the Department of Trade and Commerce. For purposes of administration, the Dominion is divided into 19 districts, each in charge of a district inspector. The chief rules of administration are as follows:—

(a) Every new type of weighing and measuring device must be submitted to the Department at Ottawa for approval before being placed on the market.

(b) Every new machine must be inspected and stamped by an inspector before being sold or taken into use.

(c) Imported machines are held by the customs until release is approved by the nearest inspector.

(d) All inspections take place on the traders' premises, except where devices are brought to the inspection offices.

(e) Fees are charged for inspection and stamping, the schedule being defined by Order in Council, and all moneys so collected are paid into the Consolidated Revenue Fund of Canada.

The following table is a summary of the articles and machines inspected in the fiscal years ended Mar. 31, 1935 and 1936. The total revenues collected by the Service in the fiscal years ended 1935 and 1936 amounted to \$407,303 and \$404,860, respectively, while the expenses, including salaries, totalled \$291,983 and \$327,229, respectively.

24.—Inspections by the Weights and Measures Service, fiscal years ended Mar. 31, 1935 and 1936.

Section 8.—Electricity and Gas Inspection.*

The Electricity and Gas Inspection Branch of the Department of Trade and Commerce administers three Acts: the Electricity Inspection Act (c. 22, 1928), the Gas Inspection Act (c. 82, R.S.C., 1927), and the Electricity and Fluid Exportation Act (c. 54, R.S.C., 1927).

The latest report of the Branch shows 481,687 electricity and gas meters tested in the fiscal year ended Mar. 31, 1936, as compared with 465,478 in the preceding year. The total revenue derived from electricity and gas inspection was \$326,439 as compared with an expenditure of \$219,292. The Branch also collected \$306,610 as export duty and licence fees under the provisions of the Electricity and Fluid Exportation Act; the cost of collecting this revenue was only \$385.

Other related statistics collected in the administration of the last-named Act will be found on p. 395, in the Water Power chapter of the Year Book. Here,

* Revised by J. L. Stiver, Director, Electricity and Gas Inspection Service, Department of Trade and Commerce.

however, are given statistics, also collected by the Branch in the process of administration, showing a phenomenal increase in the number of consumers of electricity in the past 22 years, from 505,597 to 1,788,522 (Table 25); a lesser increase in the gas meters in use from 267,454 in 1916 to 665,895 in 1936 (Table 26); and the number of cubic feet of gas sold in Canada from 1920 to 1936 classified as carburetted water gas, coal gas, coke oven gas, natural gas, acetylene gas and butane (Table 27).

Section 9.—Merchandising and Service Establishments.*

A comprehensive census of business carried on by trading and service establishments was undertaken for the first time in 1931 in connection with the Seventh Decennial Census. A partial survey of trading establishments had been made in 1924, but the results of this initial survey, while indicative of the extent of domestic trade, suffered from the incompleteness of the canvass made. The Census of Merchandising and Service Establishments, 1931, covered not only the operations of retail and wholesale merchandising establishments in 1930 but also those of service establishments, including hotels. In addition, information was collected to show the initial channels (manufacturers' wholesale branches, other wholesalers, retailers, industrial consumers, export sales, etc.) through which goods manufactured in Canada are distributed and the proportion of the total value of production sold through each channel. The results of the census have been published in several series of reports and in Volumes X and XI of the Census of 1931.

Annual Statistics.—An outgrowth of the Census of Merchandising and Service Establishments, 1931, has been an annual survey of wholesale and retail trade based on reports from larger concerns in the respective fields. In the case of wholesale trade, the annual survey is confined to wholesalers proper and reports are secured from firms which had a volume of sales of \$100,000 or more in 1930 together with firms of a similar size which have commenced business since 1930. The survey of retail trade is based on the reports of all chain stores and of independent stores with a turnover of \$20,000 or more in 1930. Reports are also secured from newly-established independent stores. While the annual figures for merchandising are not based on such a comprehensive survey as that made in connection with the decennial census, they provide the most reliable indicators available of recent trends in merchandise trade as they cover more than two-thirds of the dollar volume of business.

Monthly Statistics.—As a further development from the Census of Merchandising and Service Establishments, 1931, it has been possible to place the monthly index of retail sales, published in recent years by the Bureau, on a permanent basis. A description of this index appears in Subsection 2 of this chapter.

Subsection 1.—Wholesale and Other Bulk or Non-Retail Merchandising.

Under this heading there appeared at pp. 670-672 of the 1934-35 Year Book a summary of trade in the wholesale field, as derived from the Census of Merchandising and Service Establishments, and tables showing, for 1930, bulk merchandising statistics (1) by provinces, and (2) by type of distributor. The interested reader is referred to that material which is the latest available. Supplementary data for the chief cities in Canada are given below.

Wholesale Trade in Canadian Cities.—Summary figures for all wholesale establishments and for wholesalers proper in cities of over 20,000 population are shown for 1930 in Table 28. Included in the figures for all wholesale establishments are data for agents, brokers, manufacturers' sales branches and other specialized wholesale agencies. Wholesalers proper embrace only regular wholesale houses, such as wholesale merchants, importers and exporters. The importance of such cities as Montreal, Toronto, Winnipeg, and Vancouver as wholesale centres is clearly shown by the figures in Table 28.

* Prepared by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics. For a list of publications of this Branch, see Chapter XXIX, Section 1, under "Internal Trade".

Annual Wholesale Statistics.—In constructing an annual index of wholesale sales, the chief objective has been to obtain the most representative measure of wholesale trade and particularly of the pre-retail business. This annual index is confined to wholesalers proper. Wholesalers proper are mainly wholesale merchants, importers, exporters, and supply and machinery distributors. From this group are excluded such distributors as agents and brokers, manufacturers' sales branches and other types of specialized distributors. However, in order to attain the above-mentioned objective of a representative measure of wholesale trade, it has been necessary to make some alterations in the classifications used in presenting the results of the Census of Merchandising and Service Establishments, 1931. The principal alterations* have been to include with wholesalers proper shown here certain bulk distributors of petroleum products and head-office domestic sales of meat-packing plants which were not included with wholesalers proper in the presentation of the census statistics for 1930. Other minor changes have also been made. The net result has been to increase the value for 1930 sales of wholesalers proper from \$1,111,319,200 as shown on pp. 671-672 of the 1934-35 Year Book to \$1,370,066,000 as shown in Table 29.

Total sales and indexes are there shown by provinces and kinds of business; the 1930 figures are those of the census, while those for 1931-35 are estimates based

* These alterations are described in detail in the bulletin "Wholesale Trade in Canada and the Provinces, 1933", obtainable from the Dominion Bureau of Statistics.

on the results of the annual surveys. Wholesale trade in Canada during 1935 totalled \$1,080,742,000 compared with \$1,370,066,000 in 1930. While sales were still 21.1 p.c. below the 1930 level, the improvement which commenced during 1933 was continued, an increase of 5.6 p.c. over the amount of trade recorded for 1934 bringing the index for 1935 within 4 p.c. of that for 1931. The largest increases in sales in 1934 were reported by firms dealing in industrial equipment and supplies which had suffered the most severe losses in trade between 1930 and 1933. To what extent movements in the value of wholesale sales are due to changes in prices or to variations in the physical volume of goods handled cannot be determined accurately.

¹ The difference between this total and that shown under the heading of wholesalers proper on pp. 671-672 the 1934-35 Year Book is due to a reclassification of some firms as between wholesalers proper and other bulk distributors.

Subsection 2.—Retail Trade and Service Establishments.*

As complete a review of the retail merchandising and service statistics as will appear in the Year Book from the Census of Merchandising and Service Establishments, 1931, was given at pp. 673-690, inclusive, of the 1934-35 Year Book. This review gave detailed analyses of such trade, annual net sales and employees engaged, by provinces, business groups and kinds of business, and by manner of operation (*i.e.*, independents, two-store multiples, three-store multiples, voluntary and other types of chains, etc.). Since these statistics will stand until the next census is taken, it has been considered unnecessary to reprint them in this edition of the Year Book. In this edition, therefore, the only table reprinted, and this merely in part, is that showing the retail trade in Canadian cities, which appears now as Table 30. There is, however, additional new matter presented dealing with: (1) total sales and indexes of sales, by provinces and kinds of business, 1930-35 (figures for 1930 being from the census and those for other years estimates based upon returns secured for the annual surveys); (2) the growth of the chain store; (3) the new monthly index of retail sales which has lately assumed permanent form and in which corrections have been made to allow for variations in number of business days and for seasonal changes; and (4) detailed statistics showing the importance of the motion picture industry, recently made available as a result of a special study of this field.

Retail Merchandise Trade in Canadian Cities.—The retail merchandise trade in Canadian cities of over 20,000 population during 1930 as shown by the Census of 1931, is shown in Table 30.† The cities are arranged in descending order according to their 1931 census populations. A notable feature of these figures is the wide variation in different cities in the relationship between population and retail sales. In general, per capita sales are high for cities which form distributing centres for large or populous areas, while such sales are lowest in residential or industrial cities adjacent to larger centres, as in the case of Verdun, Outremont, Westmount and Hull.

* A review of retail trade for the period 1923-30 was given at pp. 637-639 of the 1936 Year Book. This was summarized from a special study report "A Decade of Retail Trade" published in bulletin form in 1935 by the Internal Trade Branch of the Dominion Bureau of Statistics.

† A similar table showing retail merchandise trade in cities of over 10,000 population was published at pp. 684-685 of the 1934-35 Year Book.

Annual Retail Statistics.—As in the case of wholesale merchandising, annual statistics of retail sales are based on the complete census covering 1930, supplemented by an annual survey of all the more important retail establishments, such establishments having accounted for over two-thirds of the total value of sales in 1930. In Table 31, therefore, the figures for 1930 are the results of the comprehensive census, while the figures for later years are estimates calculated from the annual surveys.

It is impossible to measure accurately the effect of the general decline in prices as a factor in the decrease in the total sales from 1930 to 1933. It probably was the principal factor in the food and apparel groups. On the other hand, the prices of more durable goods have not declined so much as food prices, so that the greater reduction in sales of groups handling durable goods is, no doubt, due much more to reduced volume.

The improvement in retail trade, evident in Canada since the spring months of 1933, was continued in 1935 when the value of sales was 5 p.c. greater than in the preceding year and 15 p.c. greater than in 1933. The index of retail sales for 1935 on the base 1930 equals 100 stands at 73.9. Increases over 1934 were recorded in all provinces, these increases ranging from 2.5 p.c. in Prince Edward Island to 9.1 p.c. in British Columbia.

Chain Stores.—During the past decade the chain store has come to occupy an important place in the field of distribution. The Dominion Bureau of Statistics classifies as chains all retail organizations operating four or more branches, excepting departmental concerns. The number of chains reported in any year thus depends not only on the rise or disappearance of firms but also on the number of units operated.

Trade, by Provinces and Kinds of Business, 1930-35—concluded.

¹ Revised since the publication of the 1936 Year Book.

As a minimum of four stores is required before a firm is classified as a chain, the reduction in branches below this number automatically removes a firm from the chain store group. In an effort to obtain some comparative information for chain stores, a careful check was made of census and other records for the year 1923. The data secured do not provide complete figures for chain stores in the early year, but the figures in Table 32 give some indication of the growth in chain stores between 1923 and 1930 for the trades in which chains hold important positions.

The sales of chain stores formed 17.7 p.c. of the total retail merchandise trade in 1930 and 17.9 p.c. in 1935. Grocery and combination store chains had 29.5 p.c. of the total sales for these businesses in 1930 and 32.5 p.c. in 1935. The proportion of chain sales to total sales in some other important lines of trade for the year 1935 were: filling stations, 25.3 p.c.; shoe stores, 30.8 p.c.; drug stores, 19.8 p.c.; and furniture stores 15.6 p.c. Summary figures for all chain stores in Canada are given in Table 33.

Retail Sales of New Motor Vehicles in Canada.—Statistics on new motor vehicle sales in Canada are collected monthly from Canadian manufacturers and assemblers, and from manufacturers in the United States of vehicles made for sale in this country. Number of units sold and retail selling value are both reported. The retail value is the price paid by an individual purchaser at the Canadian point of manufacture and includes sales and excise taxes, charges for standard accessories, dealers' commissions, etc. Freight charges from factory to place of purchase are excluded. Duty is included in the retail selling value of imported cars.

Sales in 1936 were up 14.1 p.c. in number and 18.0 p.c. in value over the preceding year. More than two and one-half times as many new vehicles were sold in 1936 as in 1933 when the lowest point was reached. Passenger model sales registered increases of 13.7 p.c. in number and 17.2 p.c. in value over 1935, while the improvement for commercial vehicles was even greater, resulting in increases of 15.9 p.c. in number and 21.6 p.c. in value over the preceding year.

34.—Retail Sales of New Motor Vehicles in Canada, calendar years, 1932-36, with Total for 1930.

NOTE.—The first year for which details are available is 1932. The total for 1930 was secured in connection with the Census of Merchandising and Service Establishments.

Financing of Motor Vehicle Sales in Canada.—Financing corporations play an important part in the retail distribution of both new and used motor vehicles in Canada. They extend credit facilities to customers who could not enter the market if required to pay with cash and to others who, though in a position to pay cash find it more convenient to budget their expenditures on the instalment basis. They also provide a service to the motor dealers by assuming the risks and inconveniences connected with instalment sales, thus permitting the dealers to operate on a smaller capital outlay than would otherwise be necessary.

Statistics on financing are compiled monthly from returns secured from all large finance companies in Canada which are engaged in purchasing accounts, contracts or notes arising out of retail sales of motor vehicles. Aggregates of the monthly data show that sales of 137,514 motor vehicles (including both new and used models) were financed to the extent of \$54,859,812 in 1936. These figures reveal increases of 37·3 p.c. in number and 36·3 p.c. in amount over the 100,178 vehicles which were financed for \$40,251,521 in 1935. New vehicles numbering 42,863 were financed for \$29,887,861 or an average of \$697 each. There were also 94,651 used vehicles whose sales were financed to the extent of \$24,971,951 or for \$264 each.

A comparison of sales and financing of new motor vehicles is shown in Table 35; 37·0 p.c. of all new motor vehicle sales in Canada in 1936 passed through the hands of financing corporations. The corresponding amount of financing amounted to 24·9 p.c. of the total selling value of all new models. Total sales of used vehicles not being available, a similar comparison for these types cannot be made.

Monthly Indexes of Retail Sales.—In recent years the Dominion Bureau of Statistics has published monthly indexes of the dollar value of retail sales based upon reports received from department stores and from chain organizations operating in thirteen lines of business. While these reports cover only a part of the field and relate only to the business of department and chain stores, they embrace a sufficiently large number of stores to provide a fairly accurate indication of the current movements in retail sales for the kinds of business which are included.

Two sets of figures are shown for the general indexes of retail trade in Table 36; in the first set no adjustments have been made, while in the second, corrections are

incorporated to allow for variations in number of business days and for seasonal influences. This general index of retail sales shows that the low point in retail trade was reached in the early part of 1933. Since that time there has been a gradual improvement in the dollar volume of sales. It has already been pointed out in connection with the annual merchandising figures that the dollar value of retail sales is greatly affected by changes in price levels. This factor should be borne in mind when considering the monthly indexes of retail sales.

A comparison of the unadjusted indexes of retail sales based upon the aggregate monthly figures of the reporting firms reveals wide seasonal swings in most lines of retail business. In general, retail sales are lowest in January and February and are highest for the year in December. A secondary peak in the spring months is followed by a recession during July and August which brings the level of trade almost to the low point of January and February. Seasonal swings are not similar in extent or timing for all lines of business. The variations are least for those kinds of business which deal chiefly in commodities subject to regular and continuous demand, while the seasonal effects are greatest in those lines of trade dealing in merchandise for which the demand is subject to definite conventional or seasonal influences. Drug stores, grocery and meat stores, and restaurants belong to the first group, while clothing, shoe, radio and music, hardware, and furniture stores belong to the latter.

The indexes of retail sales for the individual lines of business mentioned in Table 37 are corrected to allow both for variations in the number of business days in different months and for usual seasonal influences.

36.—Index Numbers of Retail Sales Based on Monthly Reports of Department and Chain Stores, by months, 1929, 1930 and 1932-36.

NOTE.—The general indexes are composite figures secured by weighting the indexes of sales for the thirteen kinds of business in proportion to their relative position in the total trade.

² Subject to revision.

37.—Adjusted Index Numbers of Retail Sales Based on Monthly Reports of Department and Chain Stores, by Kinds of Business, January, 1934, to December, 1936.

NOTE.—The indexes are compiled from the returns of 37 departmental organizations and 188 chain companies operating more than 3,300 stores. The indexes are adjusted for variations in number of stores operated, for number of business days in each month and for seasonal variations.

(Average for 1930=100.)

¹ Revised since the publication of the 1936 Year Book.

Motion Picture Statistics.—The motion picture has become the most popular form of public entertainment and the business of satisfying the demand for such amusement has assumed a corresponding importance. In 1930 the expenditure on motion picture entertainment (exclusive of amusement taxes) was \$3.77 per capita. By 1933, due to reduced patronage and lower prices of tickets, the per capita expenditure had dropped to \$2.33, while for 1935 the figure rose slightly to \$2.48.

Statistics for motion picture theatres in Canada were secured for the first time in connection with the Census of Merchandising and Service Establishments, 1931. According to the results of this census, there were 910 motion picture theatres in operation in 1930. During the depression a number of theatres were closed so that in 1933 only 765 were reported. During the following two years some recovery took place, 799 theatres being reported in operation in 1934 and 856 in 1935. Summary figures of motion picture theatres by provinces for 1930, 1934 and 1935 are given in Table 38 and the principal statistics by leading cities for 1934 and 1935 in Table 39.

Section 10.—Control and Sale of Spirituous Liquors in Canada.

During the years 1916 and 1917, as a war policy, legislation prohibiting the sale of alcoholic liquors, except for medicinal and scientific purposes, was passed in all the provinces except Quebec, where similar legislation was passed in 1919. The prohibition extended to the sale of beer and wine except in Quebec. Native wine, however, could be sold in Ontario.

In aid of provincial legislation prohibiting or restricting the sale of intoxicating liquors, the Dominion Government, in 1916, passed a law making it an offence to send intoxicating liquors into any province to be dealt in contrary to the law of that province. In 1919 this Act was changed to read that "on the request of the Legislative Assembly of a province a vote would be taken on the question that the importation and the bringing of intoxicating liquors into such province be forbidden". If the majority of those voting were found to be in favour of such prohibition, the Governor in Council was to declare it in force.

After the War the provinces continued under prohibition for varying periods. Plebiscites were taken from time to time to ascertain the will of the electorate as to whether the policy of prohibition, adopted as an emergency war measure, should be continued. During 1921 Quebec and British Columbia discarded the existing prohibition laws and adopted the policy of liquor sale under government control. The same course was followed by Manitoba in 1923, Alberta in 1924, Saskatchewan in 1925, Ontario and New Brunswick in 1927, and Nova Scotia in 1930. Thus Prince Edward Island is the only province still adhering to a policy of prohibition.

The provincial Liquor Control Acts have been framed to conform to conditions peculiar to the regions where they are in force and no two are exactly alike. The salient feature of all is the establishment of a provincial monopoly of the retail sale of alcoholic beverages, with the practical elimination of private profit therefrom. Partial exception is made in the retail sale of malt liquor by brewers, which certain provinces permit while reserving regulative rights and taxing such sales heavily. In all the provinces, however, spirits may be bought only at government liquor stores. The provincial monopoly extends only to the retail sale of alcoholic beverages, the manufacture being still in private hands but under the supervision of the Liquor Boards or Commissions. The original Liquor Control Acts have been modified from time to time as deemed advisable. Brief summaries of the legislation are given in the Bureau's Annual Report on the Control and Sale of Liquor.

Retail Sales by Liquor Control Boards.—Data on gross sales, other revenue and net profits of the provincial Liquor Boards, are tabulated in Table 40. In connection with the figures on gross sales it is essential to note that for Quebec, Manitoba, and Alberta, the sales of beer made directly by the brewers to the licensees are not included. The proceeds from such sales do not pass through the Boards, but the purchasers must pay through the brewers to the Boards a tax equal to 5 p.c. of the purchases in the case of Quebec, 12½ cents per gallon in Manitoba, and 15½ cents per gallon in Alberta.* For the latter two provinces it is possible to calculate from the taxes the gallonage of beer sold but the corresponding values are not available. For Quebec, the quantity and value of sales are published by the Liquor Commission, as shown in the footnote to the table.

* An amendment to the Alberta Liquor Control Act passed at the 1936 session of the Legislature provides that "brewers who manufacture beer in Alberta may sell only to the Liquor Board". The gallonage tax is no longer levied but is included in the spread between the price the Board pays the brewers and the price charged the licensees and permit holders.

Further, it should be pointed out that the values as given for Quebec, Manitoba, Alberta, and British Columbia do not represent the sales values to the final consumers as, in these provinces, the sale of beer by the glass is permissible.* Of course, all the liquor sold in any province is not consumed within the province. The tourist traffic is a very important factor in this connection.

All the revenue resulting from the Liquor Control Acts is not paid to the Liquor Boards. In certain provinces, permit fees are paid directly to the governments and do not pass through the Boards. Table 40 further indicates the total revenue accruing to the governments through the control of liquor sales.

The reports of the Boards do not in all cases show the quantities of liquors sold; in comparing values for a series of years or between provinces it should be borne in mind that price variations may be an important factor.

Apparent Consumption of Liquor in Canada.—It is not possible to obtain accurate figures on Canadian consumption of liquor. Except in Nova Scotia, Quebec, Ontario and Alberta, the Liquor Boards do not publish figures to show sales on a gallonage basis, and even were such data on quantity sales available for all provinces they would not necessarily represent total consumption. For example, our great tourist traffic must be considered, for it is likely that the quantities consumed by individual tourists reach a considerable amount. Further, there is no definite information regarding the illegal traffic in liquor, though inquiry has revealed that such illicit business has reached fairly large proportions.

In Tables 41, 42 and 43 an attempt has been made to indicate separately the apparent consumption in Canada of spirits, malt liquors, and wines. Obviously, these computations are subject to error for the reasons mentioned above, and also because no consideration has been given to increases or decreases in the quantities held in stock by the Boards or by licensees. For example, owing to exceptionally favourable conditions abroad, the Liquor Boards may in certain years buy heavily to replenish stocks or create reserves; such purchases would unduly weight the apparent consumption figures for these years. The figures in these tables have been arrived at as follows:—

Spirits.—Practically the total production of spirits is placed in bonded warehouses whence it is released for various purposes. The quantities shown as “entered for consumption” are released from warehouse, duty paid, presumably for consumption for beverage purposes in Canada. However, part of these may be exported. The supply of spirits available in Canada for home consumption or for export must be the sum of the quantities shown under (a) entered for consumption; (b) imports; and (c) exports in bond, and if the total domestic exports and re-exports of imported goods are deducted from this figure the remainder indicates the apparent consumption in Canada.

Malt Liquors.—Only a small part of the output of malt liquors is placed in warehouses. The available supply is, therefore, made up of (a) production; (b) changes in warehouse stock; and (c) imports. By deducting the domestic exports and re-exports of imported goods from this total supply, it is possible to obtain a figure to show the apparent consumption in Canada.

Wines.—The apparent consumption of native wines is obtained by dividing the rates of excise tax into the total tax collections. This is believed to furnish a better measure of consumption than the method formerly used, *i.e.*, to subtract the exports from the production, since part of the product is not consumed in the year of pro-

* Also in Ontario from July 24, 1934.

duction but is placed in storage for maturing. The apparent consumption of imported wines is arrived at by deducting from the imports into Canada, the re-exports of foreign supplies.

40.—Gross Sales and Net Profits of Liquor Control Boards, Additional Revenues Paid Directly to Governments, and Total Net Revenue from Liquor Control, 1933-35.

NOTE.—For Quebec, Manitoba, and Alberta gross sales do not include beer sold direct by the brewers to the licensees.

CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS.

Canada is a country of continental dimensions, nearly 4,000 miles in length from east to west, with its relatively small population of 11,028,000 (estimated population as at June 1, 1936), in the main thinly distributed along the southern strip of its vast area. Different parts of the country are shut off from each other by areas of rough, rocky, forest terrain, such as the region lying between New Brunswick and Quebec, the areas north of lakes Huron and Superior, dividing the industrial region of Ontario and Quebec from the agricultural areas of the prairies, and the barriers interposed by the mountains of British Columbia. To such a country with such a population, producing, as do our western agriculturists, mainly for export, or, like our manufacturers, largely for consumption in distant portions of the country itself, cheap transportation is a necessity of life. Before 1850, when the water routes were the chief avenues of transportation and were closed by ice for several months each year, the business of the central portions of the country was reduced to a state of relative inactivity during the winter. The steam railway was required, therefore, for the adequate economic development of Canada, more particularly for linking up with the commercial and industrial world the vast productive areas of the Canadian West, and thus promoting their development. The construction of the Canadian Pacific railway gave to Canada, as an economic unit, length; the building of the newer transcontinental railways has given the country breadth.

Railway transportation, though essential in a country such as Canada, is nevertheless expensive for bulky and weighty commodities, and also for short distances where the cost of repeated handling amounts to more than actual transportation. For bulky freight, new enterprises have been either undertaken or are under consideration for improving water communication, such as the new and deeper Welland canal, the deepening of the St. Lawrence canals and of the channel between Montreal and Quebec, and the development of the Hudson Bay route. For freight movement over moderate distances the motor truck, operating over the growing network of improved highways, is providing an increasing proportion of the service. For inaccessible areas remote from the railways the aeroplane has provided a valuable addition to the transportation facilities.

In order to appraise the value of each of these agencies of transportation from this viewpoint, this chapter of the Year Book has been re-arranged and amended. The four main agencies, namely, carriers by rail, road, water, and air, are dealt with in Parts II, III, IV, and V of the chapter. In each Part the arrangement is intended to show: (1) the plant, equipment, and facilities available; (2) the cost to the Canadian people; and (3) the traffic carried or services performed, in so far as statistics are available for each picture. Unfortunately this arrangement brings out some rather serious gaps in the information at present available; these are pointed out in the respective parts.

Scarcely less important, from the social and economic viewpoints, is the development of communications in a country so vast and with population centres so scattered. The Post Office has been a great though little recognized factor in promoting solidarity among the people of different parts of the Dominion, and this same desirable object is now being further aided by the radio, while telegraphs and telephones have done much to annihilate distance—the rural telephone, in particular, having been of great social and economic benefit in country districts. The press, again, assisted by cheap telegraph and cable rates and by low second-class mail rates

to all parts of the country, has been helpful in developing national sentiment. These means of communication are dealt with in Parts VI, VII, VIII, and IX.

Part I of this chapter includes a statement of the tendencies toward monopoly which has made it necessary to establish a measure of government control over those transportation and communication agencies which are not governmentally-owned and operated; to this is added an account of the origin and functions of the Board of Railway Commissioners.

PART I.—GOVERNMENTAL CONTROL OVER AGENCIES OF TRANSPORTATION AND COMMUNICATION.

Problems of transportation, because they are of such vital importance in the economic life of Canada, occupy a large part of the time and thought of our Parliaments and public men. With the modern development of new forms, it is becoming increasingly important to realize that the several agencies of transportation—carriers by rail, road, water, and air—are, or should be, inter-related parts of an integral whole. Each agency has its place in the efficient provision of necessary transportation in Canada. The problem, therefore, is to adjust the conditions under which each of these agencies operate so that the resulting movement of passengers and freight may be accomplished with the maximum of economic efficiency, that is, at the least possible cost commensurate with desired convenience. The recognition of this growing necessity for viewing the problems of transportation and related communications as parts of a co-ordinated whole is indicated by the organization of the Dominion Department of Transport. This Department was organized on Nov. 2, 1936, under authority of c. 34, 1936, unifying in one Department the control and supervision of railways, canals, harbours, marine and shipping, civil aviation and radio. The Meteorological Service is also under the Department of Transport.

Private enterprises engaged in the transportation and communications business in Canada, have, in the past 50 years, shown the same tendency toward consolidation and amalgamation which has been evident elsewhere throughout the civilized world. The basic reason for such consolidation and amalgamation has been the fact that the business of transportation and communications is, generally speaking, a "natural monopoly", *i.e.*, a type of enterprise in which service can be more efficiently and economically rendered to the public where one or a few concerns control a particular type of service throughout the country. The outstanding example of these consolidations in Canada in our time is the concentration of control of the railways of the country in the hands of the Canadian Pacific Railway Company and the Canadian National Railways.

However, since such control brings with it an element of monopoly and possible overcharge which is distasteful to the public, it has been deemed advisable in Canada, as in other countries, to set up authorities controlling the rates to be charged and the other conditions on which services to the public are to be rendered by common carriers. This control eventually, so far as the railways within the jurisdiction of the Dominion Government were concerned, was placed in the hands of the Board of Railway Commissioners. From time to time the regulatory authority of the Commission was extended to a limited extent to other utilities. A brief summary of the history and functions of this body follows on pp. 632-633.

Besides the Board of Railway Commissioners, dealing with the larger public utilities coming under the jurisdiction of the Dominion Government, there exist, in several of the provinces, bodies which undertake among their duties the supervision and control of local public utilities operating under the jurisdiction of the

provinces, and the regulation of their rates for service. Among these is the Ontario Department of Municipal Affairs (formerly the Railway and Municipal Board of Ontario, established in 1906), the Quebec Commission of Public Utilities established in 1909, the Nova Scotia Board of Commissioners of Public Utilities, and the Public Utilities Commission of Manitoba. In the three westernmost provinces these same duties are performed by provincial Departments of Railways.

The Board of Railway Commissioners for Canada.*

In the early days of railway building in Canada, the provinces were more concerned with rapid development than with rate regulation. Under the Railway Clauses Consolidation Act of 1851, rates were fixed by the directors of the railway, subject to the approval of the Governor in Council. Beyond this, competition was relied upon to bring rates to a reasonable level. As time went on, however, those who believed in the efficacy of competition as a regulator were disillusioned. For example, complaints were made that the Grand Trunk gave low through transit rates, say from Chicago to New York, through Canada, and recouped itself by high non-competitive rates in Upper Canada. In 1888, the supervision of rates was assigned to the Railway Committee of the Privy Council, sitting in Ottawa.

At the turn of the century, two reports were prepared for the Department of Railways and Canals by Prof. S. J. McLean, the first setting down the experience of railway commissions in England and the United States, and the second discussing Canadian rate grievances, with a recommendation that regulation by commission be adopted in Canada. The second report found that non-competitive rates were exorbitant as compared with competitive rates and that the railways had exercised their right to vary rates without notice, to the great distress of shippers. Among the weaknesses of the Railway Committee as a rate-regulating body was its fixed station at Ottawa, which made the cost of appearing before it practically prohibitive. Besides, members of Parliament had no necessary aptitude for dealing with railway rates, and of their two functions—legislative and administrative—the legislative was to them the more important.

The Board of Railway Commissioners for Canada, as provided for by the amended Railway Act of 1903, was organized on Feb. 1, 1904. In the beginning, its membership consisted of a Chief Commissioner, a Deputy Chief and one Commissioner. In 1908 the membership was increased by the inclusion of an Assistant Chief Commissioner and two other Commissioners. According to the Act, the Board may be divided into two sections of three members but, since any two constitute a quorum, two Commissioners usually hear all but the more important cases, and, agreeing, give the decision of the Board.

The powers of the Commission, in brief, are in matters relating to the location, construction and operation of railways. The most important of these powers has to do with rate regulation. Passenger rates are divided into standard and special, freight rates into standard, special and competitive. Standard rates are maximum rates and the only ones which must be approved by the Board before they are applied. Special and competitive rates, being less than maximum rates, may be applied by railways without the Board's approval, provided that a change of rates has been advertised. But important rate adjustments usually come to the notice of the Commission, for the changed rate alters the extent of the territory in which a shipper can compete and on this account he is apt to appeal the case to the Com-

*Revised by P. F. Baillargeon, Secretary, Board of Railway Commissioners for Canada.

mission. It is a knotty problem to mark the boundaries of competitive areas—to decide whether Nova Scotian manufacturers should be given rates which would allow them to compete west of Montreal, or again, whether high construction and operation costs in British Columbia should enforce a rate which prevents her goods from moving far into the prairies. By an amendment to the Railway Act, the regulation of telephone, telegraph and express rates was given to the Commission, but with narrower powers than were given to it in dealing with railways.

The procedure of the Board is informal, as suits the nature of its work, for experience has shown that hearings in strict legal form give the parties to the argument uncompromising attitudes. If possible, matters are settled by recommendations to the railway company or the shipper; thus, during 1935, 96.1 p.c. of the applications to the Board were settled without formal hearing. The Railway Committee had kept its station at Ottawa, giving only formal hearings, so that the grievances of those who could not afford to appear in person or pay counsel went unredressed. The itineraries of the Railway Commission are arranged so that evidence may be taken at the least expense to those giving it.

The Chief or Assistant Chief Commissioner, depending upon which one is presiding, gives final judgment on points of law when, in the opinion of the Commissioners, the question is one of law. On questions of fact the findings of the Board are final and are not qualified by previous judgments of any other court. Questions of law and jurisdiction are differentiated. In the first case, the Board may, if it wishes, allow an appeal to the Supreme Court; in the second, the applicant needs no permission to present his appeal.

The Railway Committee of the Privy Council, being a Committee of the Cabinet, was responsible to Parliament. When the powers of the Committee were made over to the Railway Commission the responsibility was retained, but necessarily by a different means. There is now provision for an appeal from any decision to the Governor General in Council, who may also of his own motion rescind or vary the action of the Board, but the power to rescind or vary usually consists in referring to the Board for reconsideration. From its inception until Dec. 31, 1935, the Board gave formal hearing to 10,286 cases. Its decision was appealed in 114 cases, 69 of these being to the Supreme Court of Canada and 45 to the Governor General in Council. Of the appeals, 13 of those carried to the Supreme Court were allowed and 3 of those to the Governor General in Council.

PART II.—RAILWAYS.

The treatment of rail transportation is divided into three sections dealing, respectively, with steam railways, electric railways, and express companies.

Section 1.—Steam Railways.*

The steam railway is still the most important transportation agency from the standpoint of investment and probably from that of traffic handled as well. Fortunately, the statistical field is more completely covered for this form of transportation than for any other, since there are fairly complete figures dealing with steam railway mileage and equipment, finances, and traffic.

* Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch publishes an Annual Report on Steam Railways, as well as numerous other reports, for a full list of which the reader is referred to Chapter XXIX of this volume. Certain of the financial statistics of steam railways are compiled with the co-operation of officers of the Department of Transport.

Historical Sketch.—Construction was begun on the first Canadian railway in 1835. This was a line only 16 miles long between St. Johns and Laprairie, Quebec, intended to expedite the journey between Montreal and New York. It was opened for traffic in 1836, being operated at first with horses, for which steam locomotives were substituted a year later. About the same time, a line 6 miles long was built in Nova Scotia from Stellarton to a loading point on Pictou harbour to haul coal from the mines to vessels. On this line also the motive power was at first provided by horses, but in the spring of 1839 the "Samson", a locomotive built in England, brought over in a sailing vessel and still preserved in Halifax, was put in operation. A railway from Montreal to Lachine was opened in 1847 and another line to St. Hyacinthe in 1848. In 1850, however, there were only 66 miles of railway in Canada.

Commencement of the Railway Era—The Grand Trunk.—The railway era in Canada may be said to have begun in 1851, when charters were granted providing for the construction of a main line of railway between the two Canadas. These charters were repealed when the Grand Trunk charter was granted in 1852. The result was the completion of the Grand Trunk railway between Montreal and Toronto in 1856, its extension westward to Sarnia in 1859, and eastward to Rivière du Loup in 1860. The Atlantic and St. Lawrence railway, to Portland, Maine, was leased in 1853 and in 1859, on the completion of the Victoria bridge across the St. Lawrence at Montreal, the Grand Trunk had a through route 800 miles long from Portland to Sarnia. Within the next thirty years many important railways of Ontario, including the Great Western, were acquired and the Grand Trunk lines were extended to Chicago.

Construction of the Intercolonial.—An intercolonial railway between the Maritime Provinces and Canada had been proposed as early as the 1830's. In 1844 the Imperial Government made a survey for a military road, and in 1851 agreed to recommend to Parliament either a guarantee of interest or an advance of the sum required to build a railroad. Differences of opinion as to the route resulted in the project being dropped, but in 1853 Nova Scotia undertook to construct by 1862 a trunk line from Halifax to the New Brunswick frontier, with branch lines to Pictou and Victoria Beach. In both Nova Scotia and New Brunswick, however, the scheme of an intercolonial railway broke down for lack of funds, and in 1867 there were only 374 miles of railway in the Maritimes. These, under the B.N.A. Act, passed to the Dominion Government. The latter undertook the completion of the railway, and in 1876 the line was opened to Rivière du Loup. Later on, by acquisition of, lease of, or running rights over, other lines, the Intercolonial was extended to Montreal.

The First Transcontinental Railway—The C.P.R.—As early as 1849 a pamphlet published by Major Carmichael-Smyth advocated the construction of a Canadian Pacific railway along a route approximating that later taken. In 1851 a Parliamentary Committee reported against the enterprise at that time. In 1871 the terms under which British Columbia entered Confederation bound the Dominion to commence the Pacific railway within two years and complete it within ten years. The building of the railway as a public work actually commenced in 1874, but was not very rapidly pushed forward. In 1880 the Government entered into a contract with the Canadian Pacific Railway syndicate, granting to the syndicate all portions of the line completed or under construction, a cash subsidy of \$25,000,000, a land grant of 25,000,000 acres, free admission of materials for construction, and protection for 20 years against competing lines. The company on its side agreed to complete the railway to a fixed standard by May 1, 1891, and thereafter to maintain it

efficiently. As a matter of fact, the last spike on the main line was driven on Nov. 7, 1885. Like the Grand Trunk, the Canadian Pacific Railway began to acquire branch lines as feeders in the settled parts of the country along its route.

The Second Transcontinental—The Grand Trunk Pacific.—About the end of the century the Grand Trunk, which already had a line as far west as Chicago, submitted to the Canadian Government a proposal whereby it might participate in the settlement and development of the West. Lines were to be leased from Chicago *via* Minneapolis to Winnipeg, and thence a new line, subsidized by the Government, would be built to the Pacific coast. The Government raised objections to so much of the line lying in the United States and a second proposal was made for a connecting line with larger subsidies from North Bay to Winnipeg. The Government submitted, in 1903, a counter proposal that the line, instead of terminating at North Bay, should be continued east to Moncton, New Brunswick, the eastern section from Moncton to Winnipeg to be constructed by the Government and leased to the Grand Trunk Pacific for a 50-year period, the railway paying no rent for the first seven years and 3 p.c. on the cost of the railway for the remaining 43 years. The western half of the railway from Winnipeg to Prince Rupert was to be built by the Grand Trunk Pacific, the Government guaranteeing interest on bonds to 75 p.c. of the cost of construction, not exceeding \$13,000 per mile on the prairie section and \$30,000 per mile on the mountain section. The Grand Trunk reluctantly accepted this proposition and construction of the National Transcontinental and Grand Trunk Pacific commenced.

The Third Transcontinental—The Canadian Northern Railway.—The third transcontinental railway, the Canadian Northern, was begun in 1896 with the completion by Mackenzie and Mann of the 125-mile line of the Lake Manitoba Railway and Canal Co., chartered in 1889. The charters of the Winnipeg and Hudson Bay, the Manitoba and Southeastern, the Ontario and Rainy River, and the Port Arthur, Duluth and Western were next acquired. Assisted by the Manitoba Government, which desired to establish competition with the Canadian Pacific Railway, the Canadian Northern then secured the Manitoba lines of the Northern Pacific and in 1902 completed its line from Winnipeg to Port Arthur. During the following decade, the agricultural west was filling up very rapidly and, with the public of Canada under the influence of this boom, the Canadian Northern Railway was able to secure guarantees of bonds from the Dominion and Provincial Governments to enable it to extend its lines both westward to Vancouver and eastward to Montreal and so complete the great scheme of a transcontinental road.

Effect of the War on the Railways—The Drayton-Acworth Report.—With two new transcontinental main lines, besides branches, under construction, Canadian railway mileage was doubled between 1900 and 1915, increasing from 17,657 miles in the former year to 34,882 miles in the latter. The builders of the new lines, as well as the Canadian Government and people, had expected that immigration of capital and labour from Europe would rapidly settle the areas tributary to the new railroads and give them abundant and lucrative traffic, as had been the case with the C.P.R. Instead, the War came, and European labour and capital were conscripted for the struggle; immigration fell off, while cost of operation increased, owing to the scarcity of labour and material in Canada. The interest on the bonds had to be met, and in 1915 the Government felt it necessary to give assistance to the railways. In 1916, after having again made loans to the Grand Trunk Pacific Railway and the Canadian Northern Railway Co., a Royal Commission was appointed by Order in Council of July 13, 1916, to investigate: (1) the general problem of transportation;

(2) the status of each of the three transcontinental systems; (3) the reorganization of any of the said systems, or their acquisition by the State; and (4) other matters considered by the Commission to be relevant to the general scope of the inquiry. The majority report of the Commission, signed by Sir Henry Drayton and Mr. Acworth, has formed the basis of the subsequent railway policy of Canada. Their recommendation was that the public should take control of the Canadian Northern, of the Grand Trunk Pacific and the Grand Trunk proper, and that they should be administered on purely business principles by a board of trustees, such compensation as seemed proper to be decided by arbitration and given to the shareholders of the Canadian Northern and the Grand Trunk.

The process of the acquisition of these railways and the financial results of their operation down to the end of 1935 are described in the latter part of Subsection 2, pp. 644-651.

The Royal Commission of 1931.—During 1930 and 1931 both freight and passenger traffic declined until new low records were being established each succeeding month. Freight and passenger revenues consequently decreased at alarming rates and with increased capital expenditures and fixed charges, the financial condition of Canadian railways demanded re-adjustment. To study the situation and, if possible, to remedy it, the Government appointed a Royal Commission which, on Sept. 13, 1932, submitted its report, summarized at pp. 648-650 of the 1933 Year Book. During the following session of the Dominion Parliament legislation known as The Canadian National-Canadian Pacific Act, (c. 33) 1933, was passed. A summary of this legislation was given at p. 655 of the 1936 Year Book.

Subsection 1.—Mileage and Equipment.

The mileage of steam railways in operation in Canada is given for 1835 to 1849 and for each year from 1850 to 1935 in Table 1, showing the first great period of construction in the 1850's, when the mileage grew from 66 to 2,065, the lull in the 1860's, the second great period of construction in the 1870's and 1880's, the lull in the 1890's, the third great period of construction between 1900 and 1917 and the subsequent falling-off in the rate of increase.

1.—Record of Steam Railway Mileage as at June 30, 1835-1919, and Dec. 31, 1919-35.

¹ June 30 for this and prior years.

² Dec. 31 for this and later years.

In total railway mileage Canada now ranks fourth with 42,916 miles, the United States, Soviet Russia and British India being the only countries with greater total mileages, and in miles per capita only Australia has a greater average, Canada's density being one mile of line for each 257 persons (exclusive of 339 miles, chiefly main lines, of Canadian railways crossing over United States territory).

The operated mileage in the different provinces is given for recent years in Table 2. Construction was most active in Manitoba, Saskatchewan and Alberta during the period covered while there has been a tendency for mileages to decline slightly in the other provinces, due to the abandonment of unprofitable lines.

Rolling-Stock.—Statistics of the rolling-stock of the steam railways of Canada are given for the latest seven years in Table 3. The figures may be supplemented by the statement that between 1920 and 1935 the average capacity of box cars increased from 34·779 tons to 40·462 tons, of flat cars from 33·459 to 40·958 tons, and of all freight cars from 35·141 tons to 41·047 tons. The average tractive power of the locomotive in use in 1920 was 31,112 lb. and in 1935, 38,140 lb.

Subsection 2.—Finances of Steam Railways.

The tables in this subsection deal with the capital liability, capital invested, earnings, operating expenses, employees and their earnings, and governmental aid to steam railways. However, the presentation of the financial statistics of railways in Canada would not be complete without some detailed consideration of the finances of the Government-owned railways. This is given in the latter part of the subsection. Some further statistics of revenue are included in Table 9 of the following subsection, where they are shown in relation to traffic.

Capital Liability.—The capital liability of the steam railways of Canada is shown in Table 4 for the years 1901 to 1935. The great increase after 1922 is due to the inclusion of all Government loans to railways and investment in road and equipment of Government railways as part of the capital liability of the railways. Statistics of individual lines are given in Table 5.

4.—Capital Liability of Steam Railways, as at June 30, 1901-19, and Dec. 31, 1919-35.

NOTE.—Corresponding figures for each year from 1876 to 1900 inclusive were given on p. 649 of the 1927-28 Year Book.

¹ Includes 26.18 miles of joint track. Canadian lines only for Canadian National, but Canadian and U.S. lines for Canadian Pacific. ² Including capital of leased lines. ³ Constructed and operated by Ontario Government Railway Commission. ⁴ Included with Canada Southern Rly. ⁵ Includes \$204,114,455 Canadian railway capital owned by Canadian railways. ⁶ Ceased operations during the year. ⁷ Included in C.P.R.

Capital Investment.—When comparison is made between the figures of Table 6 below and those of Table 4, it is seen that the capital liability of the steam railways is considerably greater than the actual investment in physical property by the railways at the same date. This discrepancy is largely accounted for by the fact that the total of capital liabilities as shown in Table 4 includes loans and advances from the Government to cover deficits of the Canadian National Railways and unpaid accrued interest on Government loans which, up to Dec. 31, 1935, amounted to \$495,030,137 as shown in Table 16. A further factor in the discrepancy is that some of the outstanding railway stocks represent little actual investment in physical property.

¹ Details of this item are given in the Annual Report on Steam Railway Statistics issued by the Transportation and Public Utilities Branch of the Bureau of Statistics.

Earnings and Expenses.—Operating expenses of Canadian railways rose during 1918, 1919 and 1920, much more than operating revenues, and the operating ratio, or ratio of expenses to revenues, increased from around 70 p.c. to above 90 p.c. and remained high thereafter. The United States Government took over the operation of the United States railways when that country entered the World War and increased the rates of pay of the railway employees. The Canadian railways were also obliged to make corresponding increases and this increase in payroll has been the chief factor in increased operating ratio. Declining revenues without corresponding reductions in expenses during the past five years have also maintained the high operating ratio. The gross earnings and operating expenses of individual railways in the latest year appear in Table 5 above.

Railway Wages and Salaries.—The data in Table 9 show the numbers of employees and salaries and wages as reported by the railways for 1926 to 1935 inclusive. The Canadian National Railways brought into their railway accounts in 1928 the commercial telegraph employees, and these have been added for 1926 and 1927 in this table to make the data comparable. Because of inability of the railways to supply strictly comparable data for previous years, the number of employees and wages have been omitted for such, but index numbers have been computed for 1912-35 on as nearly comparable bases as possible, using 1926 data as equal to 100. The number of employees fluctuates with the volume of traffic, but not to the same extent. Salaries and wages are affected by the number of employees, rates of pay, and by the time worked. The rapid increase in the average wage in 1918 and 1919 was due to large increases in rates of pay corresponding to the "Macadoo Award" in the United States. Also the fluctuations in 1932-35 were due to reductions and restorations in basic rates of pay.

¹ Owing to the inability of the railways to supply strictly comparable data for the years prior to 1926, statistics of employees and wages which were given on p. 664 of the 1936 Year Book have been omitted here; the adjusted index numbers express the relation with later years as closely as it can be approximated.

² Ratio of salaries and wages chargeable to operating expenses only for 1926 and subsequent years.

Government Aid to Railways.—In order that the private railways of Canada might be constructed in advance of settlement, as colonization roads, or through thinly settled districts where little traffic was available, it was necessary for Dominion, Provincial and even municipal governments to extend some form of assistance. The form of aid was generally a bonus of a fixed amount per mile of railway constructed and, in the early days, grants of land other than for right-of-way were also made. Table 10 shows the areas of the land granted as subsidies and for right of way, station grounds and townsite purposes to steam railway companies by the Dominion and Provincial Governments, with the names of the companies in the case of the Dominion Government.

As the country developed, the objections to the land-grant method became more apparent, and aid was more frequently given in the form of a cash subsidy per mile of line, a loan, or a subscription to the shares of the railway, as shown analytically in Table 11. Table 12 records the details of the most recent type of assistance given to private railways, *viz.*, by the guaranteeing of their bonds or of the interest thereupon. These guarantees enabled the railways receiving them to borrow money at rates of interest considerably lower than would otherwise have had to be paid.

Grand Total.....	817,524,098

¹ Does not include \$216,207,142 perpetual debenture stock and guaranteed stock of the Grand Trunk Railway, now part of the Canadian National system, on which interest and dividends are guaranteed by the Dominion Government, nor Government-guaranteed bonds held by the Government itself, but it does include \$48,000,000 advanced to the Canadian Pacific Railway by the banks and guaranteed by the Dominion Government. This latter sum is not included in the railway guarantees in Public Accounts, being shown as a Relief Act guarantee.

FINANCIAL STATISTICS OF GOVERNMENT-OWNED RAILWAYS.

Canadian Government Railways.—The Intercolonial railway, built as a condition of Confederation and completed in 1876, and the Prince Edward Island railway, opened in April, 1875, have, since their construction, been owned and operated by the Dominion Government. In 1903 the Dominion Government undertook the construction of the National Transcontinental railway from Moncton, N.B., to Winnipeg, to be leased to the Grand Trunk Pacific Railway Co. for a period of 50 years. However, as a result of the conditions arising from the Great War, the company was unable to take over the operation of the road when completed in 1915. The Government itself undertook its operation and was also obliged to lease the Lake Superior branch of the Grand Trunk Pacific Railway, which was isolated from the main line. A number of eastern branch lines have been acquired in recent years. The Hudson Bay Railway is a direct liability of the Dominion Government and is being operated by the Canadian National for the Government from April 1, 1935, but is not included in the data for Canadian National Railways. To Mar. 31, 1936, the total cost of this railway was \$33,605,777, and of terminal work at Churchill \$13,694,421, exclusive of the expenditure of \$6,274,218 on the terminal at Nelson, some of which was salvaged.*

* These figures of total cost include deficits from operations during construction.

13.—Canadian Government Investments in Railways, including Loans, to Mar. 31, 1936,¹ and for the fiscal year 1936.

NOTE.—Summarized from the Annual Report of the Department of Railways and Canals (now the Department of Transport). These investments were given by individual railways on pp. 671-672 of the 1936 Year Book. Since, except for the Hudson Bay Railway and loans to the Canadian National, they have changed little in recent years, they are repeated here, only insofar as the main items of interest are concerned.

The Consolidation and Organization of the Canadian National System.*

—In pursuance of an Act of 1917 (7-8 Geo. V, c. 24), the Government acquired the capital stock of the Canadian Northern Railways with a mileage of 9,566.5. The insolvency of the Grand Trunk Pacific led to the appointment of the Minister of Railways as receiver on Mar. 9, 1919, and in October, 1920, the road was transferred to the Canadian National Railways. The Grand Trunk Railway was acquired under c. 13 of the Statutes of the second session of 1919, providing for arbitration of the considerations to be given to its shareholders. This arbitration finally disposed of, steps were taken to consolidate the various railways under government operation and control. In October, 1922, the Grand Trunk Board and the Canadian Northern Board gave place to a single Canadian National Board, to which the former Canadian Government Railways were turned over for management and operation. The unification of the Grand Trunk and Canadian National Railways was provided for by Order in Council of Jan. 30, 1923, which also brought into effect the Act to incorporate the Canadian National Railway Co. and respecting Canadian National Railways (c. 13, 1919).

Operating Finances of the Canadian National Railways.†—In Table 14 "Canadian Lines" include those of the Canadian Northern system, the Grand Trunk Railway of Canada, the Grand Trunk Pacific, and the Canadian Government Railways. The "United States Lines" include those lines known as the New England line, the Grand Trunk Western, the Duluth, Winnipeg and Pacific, and, from Feb. 1, 1930, the Central Vermont. The Hudson Bay Railway was returned

* For further details of the acquisition of the Canadian Northern, Grand Trunk Pacific, and Grand Trunk Railways by the Dominion Government, see pp. 602-603 of the 1926 Year Book.

† For detailed statistics of the operation and finances of the Canadian National Railways during 1935, see Steam Railway Statistics, 1935, and Canadian National Railways, 1923-35, published by the Dominion Bureau of Statistics, also the Annual Report of the Canadian National Railways.

to the Government while under construction, and appropriations, etc., for this were not included with the 1926 and later data.

Gross revenues, operating expenses and net revenues shown in Table 14 include only those from steam railway and commercial telegraph operations, but the deficits are for the entire system, including the operating results of the Niagara, St. Catharines and Toronto Railway (electric) and other railways operated separately, hotels, commercial telegraphs, coastal steamships and all other outside operations.

Up to 1928 there was a marked improvement over the results of the first year after consolidation (1923), when the deficit, including profit and loss adjustments, was \$54,634,323, but the light traffic in 1932 so reduced gross revenues that, with increased interest charges, the deficit increased to \$101,335,074. It was reduced slightly in 1933 to \$97,651,957, in 1934 to \$89,662,354, and in 1935 to \$84,827,858.

The figures of Table 14, taken from the accounts of the railways, are as at Dec. 31.

¹ Includes Central Vermont Railway from Feb. 1, 1930. ² Revenues and expenses 1923-27, adjusted to include commercial telegraph lines to be comparable with 1928-35. ³ The deficit shown is as per the accounts and includes Government interest accounting adjustments of \$14,595,102 and appropriation for insurance fund of \$9,590,148, the actual cash deficit for the period being \$383,570,162. ⁴ Interest at 4 p.c. on \$34,927,098 G.T.P. debenture stock reduced under agreement to 2 p.c. ⁵ Revised since the publication of the 1936 Year Book.

The Debt and Interest Charges of the Canadian National Railways.—

Table 15 analyses the increase in the debt and interest charges of the system, including both Canadian and United States lines. To define clearly what is included under debt due to the Dominion Government in Table 15, the appropriations for the Canadian Government Railways have been separated from the loans and advances to the remainder of the system. The Canadian Government Railways include the Intercolonial, National Transcontinental, Prince Edward Island and several other smaller railways in the eastern provinces, together with the Quebec Bridge. The Hudson Bay Railway was included in the Canadian Government Railways until 1926, when it was transferred back to the Department of Railways and Canals for completion, and appropriations on its account were deducted. These Canadian Government Railways appropriations do not include the operating deficits of the Canadian Government Railways for 1919 and subsequent years nor the deficits of other portions of the Eastern Lines* since July 1, 1927, but include investments for construction, purchase and working capital of the Canadian Government Railways. As the book value of these properties is included on the assets side of the balance sheet, the cost of these roads to the Dominion is included in the liabilities of the system as an offset. The construction or purchase of these roads was financed by the Dominion from the Consolidated Revenue Fund, and consequently no interest on such expenditures is allowed for in the railway accounts.

* Canadian National lines east of Lévis and Diamond Junction, Que.

¹ See Table 17, for short-term debt.

² Deficits of Eastern Lines from July 1, 1927, and for entire system from Jan. 1, 1932, are paid by the Dominion Government and are not included in this table. See Table 17.

³ Includes \$216,207,142 perpetual debenture stock guaranteed as to interest only, formerly Grand Trunk bonds.

⁴ Amounts outstanding at dates constituent lines were taken over by Canadian National, viz.: Canadian Northern, Sept. 30, 1917; Grand Trunk Pacific, Mar. 9, 1919; Grand Trunk, May 21, 1920; Canadian Government, Mar. 31, 1919 (actual date of transfer Nov. 20, 1918).

⁵ Includes Hudson Bay \$14,531,706, eliminated from statement in 1926.

⁶ Credits for property including Hudson Bay Railway, Halifax Harbour property, etc., transferred to other Government departments or bodies.

⁷ Government loans to lines other than Canadian Government Railways now comprising Eastern Lines ceased to accrue interest after July 1, 1927. These on June 30, 1927, were: capital \$2,565,605, deficits \$8,835,176, total \$11,400,781.

⁸ Central Vermont included in annual report; excluded here.

⁹ Temporary loans and inter-line loans eliminated.

¹⁰ St. John and Quebec Railway bonds \$2,727,978 guaranteed by New Brunswick transferred from unguaranteed to guaranteed, 1929-35.

¹¹ Includes temporary loan for refunding purposes, \$74,726,975.

¹² Revised since the publication of the 1936 Year Book.

¹³ The amount not included in the Dominion Government debt is the total due the public, since the total due the Government is already taken into account in Dominion debt figures.

In a rather different class are the loans and advances made by the Government to the Canadian National Railways or constituent companies on notes, bonds and receiver certificates with accrued simple interest ranging from 3½ to 6 p.c. In computing the public debt of Canada the Finance Department considers these railway loans and advances as "non-active assets" similar to investments in canals, public works, etc., and as such does not subtract them from the gross debt in computing the net debt. The railways, however, debit their accounts with the accrued interest on these Government advances, all of which remains unpaid.

The debt due to the public includes debenture stock maturing and perpetual, and bonds and mortgages of the constituent railways, but does not include the capital stock of the Grand Trunk Railway held by the Government, nor the cost of acquiring the same. Likewise it does not include the capital stock of the Canadian Northern system. The stock of the Grand Trunk Pacific is all held by the Canadian National system and is, therefore, not included either.

Table 16 has been compiled to reconcile the investments in and loans to the Canadian National Railways (including Canadian Government Railways) as shown in the Public Accounts for the fiscal year ended Mar. 31, 1936, with the debt to the Dominion Government shown in the Railways' balance sheet at Dec. 31, 1935 amounting to \$1,654,693,322 as shown for 1935 in the first half of Table 15 above.

16.—Reconciliation between Public Accounts, Mar. 31, 1936, and Canadian National Railways' Balance Sheet, Dec. 31, 1935, with Respect to the Railways' Obligations to the Dominion Government.

¹ Excludes assistance under Supplementary Public Works Construction Act, c. 34, 1935, as follows: purchase of railway equipment, \$3,884,489; increased employment in shops for equipment repairs, \$1,183,593; total, \$5,068,082.

Table 17 analyses the funds received and expended by the Canadian National Railways. In addition to the funds available under long-term debt, as shown in Table 15, the railways have frequently had short-term loans as well as appropriations from Consolidated Fund Account for Eastern Lines and other cash deficits. The figures given in Table 17 differ from the figures given in the annual reports of the railways by reason of certain accounting adjustments.

Subsection 3.—Steam Railway Traffic.

In addition to an analysis of passenger and freight traffic statistics for all steam railways, a separate analysis is given of the operations and traffic of the Canadian National Railways, since, being owned and operated by the Dominion Government, it is considered of special interest. The principal commodities handled as freight on all steam railways are shown by weight, while statistics of accidents conclude the subsection.

Passenger and Freight Traffic.—The maximum volume of passenger traffic, as indicated by passengers carried one mile, was reached in the calendar year 1919 and the maximum of freight traffic in 1928. In recent years both freight and passenger traffic, especially the latter, have been affected by the increase in the use of motor vehicles and this traffic decrease was much aggravated by the general decline in commercial activity after 1929, but improvements were made in 1934 and 1935.

The average haul for freight in Table 19 is the average for all railways, which eliminates the effects of consolidations of railways and of interchanging freight between Canadian railways. The average revenue per passenger increased in 1918 and 1919 with increases in rates, but the increases between 1924 and 1930 were largely due to decreases in the short haul traffic. The increases in freight train loading and train revenues have been due to the use of larger and more powerful locomotives.

19.—Summary Analysis of Statistics of Passenger and Freight Services and Receipts, for the years ended June 30, 1915-19, and the calendar years 1919-35.

¹ Includes caboose miles.² Duplication eliminated, see Table 21 for details of freight carried.

Operation of the Canadian National Railways.—The Canadian National system's steam mileage at Dec. 31, 1935, including lines in the United States, but exclusive of the Northern Alberta Railways and Toronto Terminals Railway (which are controlled jointly by the Canadian National and the Canadian Pacific Railways), was 23,684.24. Including the Thousand Islands Railway, 4.51, and the Muskegon Railway and Navigation Co., 5.25, controlled but separately operated, the total steam mileage was 23,694.00. Including 120.46 miles of electric lines, the grand total was 23,814.46.

The Maritime Freight Rates Act (17 Geo. V, c. 44), effective July 1, 1927, ordered that the accounts of the Canadian National lines east of Lévis and Diamond Junction, Quebec, be kept separate from those of the remainder of the Canadian National system. These lines were designated the "Eastern Lines" of the Canadian National Railways. The Act ordered that specified freight rates on the Eastern Lines be reduced by 20 p.c. Other railways were allowed to make similar reductions in their freight rates in that territory and to bill on the Board of Railway Commissioners of Canada for the difference in freight receipts due to such reductions. The differences between the reduced rates and the normal rates are treated as revenues by the Canadian National Railways and paid by the Dominion Government. The totals paid to all railways under the Act were \$1,353,464, \$2,758,893, \$3,092,677, \$3,615,218, \$2,554,673, \$1,922,073, \$1,989,130, \$2,529,394, and \$2,348,399, respectively, for the years 1927-35.

For operation, the Canadian National Railways system is divided into five divisions: the Atlantic Division, including all lines east of Rivière du Loup and Monk, Quebec, 3,331 miles; the Central Division, west from these stations to Port Arthur and Armstrong and south to Portland, Maine, 7,507 miles; the Western Division, all lines west of Port Arthur and Armstrong including the line to Duluth, 11,385 miles; the Grand Trunk Western, all lines in Michigan, Indiana and Illinois, 1,007 miles; and the Central Vermont from Iberville, Quebec, to New London, Connecticut, 455 miles.

The Quebec Bridge across the St. Lawrence above Quebec city, with a main span of 1,800 ft., carrying a single track railway and accommodation for motor and pedestrian traffic, forms a connecting link in the Canadian National Railways system and is operated as a part of it.

Table 20 shows some of the more important train traffic statistics of Canadian National Railways operation for the years 1934 and 1935.

¹ Excludes electric lines.

² Revised since the publication of the 1936 Year Book.

Commodities Hauled.—In Table 21, the duplications from two or more railways handling the same freight have been eliminated. The peak year was 1928 when agricultural products were particularly heavy. The 1935 statistics show an increase of 1,104,595 tons, or 1.6 p.c. over the 1934 total and a decrease of 41.7 p.c. from 1928.

21.—Commodities Hauled as Freight on Steam Railways during the calendar years 1931–35.

NOTE.—In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. In this respect these figures differ from those in the corresponding table in the 1926 and previous Year Books.

Railway Accidents.—The number of passengers, employees and others killed and injured in steam railway accidents is given in summary form from 1920 to 1935 in Table 22, and in detailed analysis for 1933 to 1935 in Table 23. All injuries to passengers are included, no matter how slight, but for employees only injuries which keep the employee from his work for three days during the ten days following the accident are recorded.

22.—Numbers of Passengers, Employees and Others Killed and Injured on Steam Railways, calendar years 1920-35.

NOTE.—For the years ended June 30, 1888 to 1919, see Canada Year Books, 1910, p. 378, and 1922-23, p. 635.

1930.....	15	548	103	9,678	345	837	463	11,063
1931.....	3	399	55	5,966	202	830	260	7,195
1932.....	7	342	77	4,631	242	598	326	5,571
1933.....	8	319	53	4,409	219	645	280	5,373
1934.....	16	432	57	5,179	242	589	315	6,200
1935.....	10	440	70	5,221	271	625	351	6,286

The number of passengers killed in accidents dropped from 16 in 1934 to 10 in 1935. None of these was killed in collisions or derailments, but 8 were killed falling from cars and getting on and off cars. The passengers injured in accidents which resulted from the movement of trains (Table 23), as distinct from all accidents increased from 417 in 1934 to 432. The number of employees killed remained the same as in the previous year at 43 and the number injured decreased from 1,119 to 1,026. The number of other persons killed in train accidents increased from 236 to 269, due largely to a greater number of pedestrians and motorists being struck at highway crossings. The number of motorists killed increased from 63 to 106 and the number injured increased from 211 to 213. Railway employees were absent from their duties because of injuries received in accidents (train and non-train) for 150,615 days as against 147,634 days in 1934.

These accidents include all accidents in which railway trains were involved and accidents on railway property. The classification of accidents used in the Bureau's vital statistics classes collisions between motor vehicles and trains as motor vehicle accidents; also provincial statistics of motor vehicle accidents class these as motor vehicle accidents and consequently adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor vehicle.

Section 2.—Electric Railways.*

The cheap and reasonably rapid conveyance of human beings is a necessity of modern urban life. One important means by which this necessity is supplied throughout Canada is the electric street railway, generally operated by hydro-electric energy.

Historical.—Replacing the horse-car systems, used in Montreal and Toronto as early as 1861, electric street railways were first seen in operation in Canada in 1885, when a successful experimental railway was constructed and operated at the Toronto exhibition grounds. Before many years their safety and convenience resulted in the discarding of the older systems. An electric system 7 miles in length was opened at St. Catharines in 1887, using the double overhead trolley. The second electric railway in Canada commenced operations in Vancouver, in June, 1890. This was followed by the completion of the Ottawa Electric Railway in 1891, and the electrification of the Montreal and Toronto systems in 1892. The street railways of other eastern cities were generally electrified during the 1890's, while in the newer western cities electricity was used from the commencement. In the cities of Eastern Canada, electric street railways are generally operated by private companies under city franchises, while in a considerable number of cities in Ontario and the West the street railways are owned and operated by the municipalities, a fact indicated in Table 26.

Many difficulties are met in operating the cars during the winter season, owing to snow. This, however, has been overcome by the use of sweepers, scrapers and ploughs. The single overhead trolley system has been found the most suitable and is in general use. During the past few years an increasing number of motor buses have been used; in 1924 only 48 were operated, but by 1935 the number had increased to 552.

In addition to street railways in the cities there are several systems serving suburban areas and also doing an inter-urban business, but this latter class of service is fast being supplanted by motor bus service. Indeed the development of motor vehicles, while providing competition for all forms of rail transportation, has affected electric railways more seriously than steam railways. The dependence of the former upon short-distance passenger traffic renders them particularly susceptible to the competition of motor vehicles. Since the War, a number of electric railways have been abandoned, first main track mileage has declined 26 p.c. since 1925 (see Table 27, p. 662), while even in the larger cities electric railways have generally been obliged to increase their tariffs owing to the slow growth or actual decline of traffic.

Subsection 1.—Equipment of Electric Railways.

Table 24 below shows details of the track mileage and of the rolling-stock of electric railways in the four latest years. Statistics of the first and second main track mileage in each year since 1919 will be found in Table 27 of Subsection 3, and of the mileage operated by individual companies in Table 26 of Subsection 2.

* Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch publishes an annual report on Electric Railways in Canada.

¹ Municipally owned. ² Provincially owned. ³ Operated by the Hydro-Electric Power Commission of Ontario. ⁴ Debentures of the London Rly. Commission. ⁵ \$310,500 held by Canadian National Ry. and \$189,500 included in stock outstanding of Canadian National Ry. ⁶ Held by Canadian National Ry. ⁷ Investment in road and equipment. ⁸ \$4,264,725 held by Canadian Pacific Railway. ⁹ Represents all divisions of the company. ¹⁰ Operated by Toronto Transportation Commission. ¹¹ Operated by Quebec Railway, Light and Power Co. ¹² Citadel division operations only. Total capital and operations of the Montmorency division are included in steam railways. ¹³ Ceased operation Feb. 9, 1935.

Subsection 3.—Traffic of Electric Railways.

The most important traffic statistics for electric railways are given for each year since 1919 in Table 27 below. Passenger traffic on individual railways is included in Table 26, p. 661. Accidents to passengers and employees are given in Table 28.

27.—Summary of Statistics of Electric Railway Operation, calendar years 1919-35.

NOTE.—Owing to lack of comparability in some particulars, figures prior to 1919 are omitted here but they may be found at p. 681 of the 1936 Year Book for the years 1911-18 and at p. 676 of the 1933 Year Book for years 1901-10.

Section 3.—Express Companies.*

"Express service is an expedited freight service on passenger trains". But express companies do not own the means of performing their services; they use railway facilities by virtue of contracts with the railway companies. Express companies in Canada have had close relations with the railways practically from the beginning. A brief history of the various express companies will be found on pp. 611-612 of the 1926 Year Book.

Goods are sent by express for quick transit, so that express rates do not compete with freight rates. Thus in its first tariff the Dominion Express Co., in pursuance of its contract with the Canadian Pacific Railway, gave a rate of $2\frac{1}{2}$ times the maximum first-class railway freight rate for the same goods carried the same distance. The majority of the contracts between express and railway companies for carrying express freight are on the basis of a percentage of the gross express revenue. The rates are subject to the approval of the Board of Railway Commissioners.

Before 1915, an express company in Canada was not liable for delay or damage caused by anything quite beyond its control, thus maintaining itself as an entity separate from the railway company. Thenceforth an express company became liable for delay or injury of goods if either was caused by the railway company in whose cars the goods were being carried. Since that time some independent express companies have been replaced by departments of the railways for the handling of express business.

Express Company Operations.—During 1935, the latest year for which statistics are available, three Canadian and one American express organizations operated in Canada. The Canadian Pacific Express Co., formerly the Dominion Express Co., is a subsidiary of the Canadian Pacific Railway and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Canadian National system and Northern Alberta railway is handled by departments of the respective railways. The Railway Express Agency, Inc., operates over the Canadian sections of United States railways and over the route from Skagway to points in Yukon. These companies are all organized under powers conferred by Acts of the Dominion Parliament and their business consists in the expeditious shipment of valuable live stock, and such perishable commodities as fresh fish, fruit, etc., the forwarding of parcels and baggage and the issue of money orders, travellers cheques, letters of credit and other forms of financial paper. No statistics are available regarding the volume of traffic carried by express. Much of the traffic, of course, consists of parcels and small lots which would make statistical classification and measurement very difficult. However, there is also an important movement in car lots of live stock, fresh fish, fruit, vegetables and other perishable commodities. The total capital liabilities of the three Canadian companies and departments stood at \$6,227,169 on Dec. 31, 1935.

In the following tables the amounts paid by express companies to the carriers, *i.e.*, railways, steamship lines, etc., for transporting the express matter, are shown under the heading "express privileges". Of the total of 62,992 miles operated in 1935, 42,438 were over steam railways, 279 over electric railways, 14,227 on ocean steamship services (mainly by the Canadian Pacific lines), 5,188 miles on inland or coastal steamboat routes and 860 miles over other carriers.

* Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch issues an annual report on Express Statistics.

29.—Summary Statistics of Revenues and Expenses of Express Companies, calendar years 1919-35.

NOTE.—Corresponding figures for the years ended June 30, 1911-18, were published at p. 673 of the 1927-28 Year Book.

PART III.—ROAD TRANSPORTATION.*

Since the recent development of highways in Canada has been almost exclusively for the purpose of providing roadbed for motor vehicle traffic, highways and motor vehicles are treated in this edition as features of the same form of transportation, instead of being dealt with in separate parts of the chapter as in former editions. After an introductory section which briefly summarizes provincial regulations regarding motor vehicles and motor traffic, the whole subject of road transportation is dealt with under the headings of facilities, finances, and traffic, similarly to the treatment of other forms of transportation.

Section 1.—Provincial Motor Vehicle and Traffic Regulations.†

NOTE.—In this Section, it is obviously impossible to include the great mass of detailed regulations in force in each province. The purpose in view is to provide only the more important general information. For detailed regulations for specific provinces the sources of information are given on p. 666. See also "The Highway and Motor Vehicle in Canada", an annual bulletin published by the Dominion Bureau of Statistics and obtainable from the Dominion Statistician, price 25 cents.

General.—The licensing of motor vehicles and the regulation of motor vehicle traffic lies within the legislative jurisdiction of the Provincial Governments in Canada. Regulations which apply in all the provinces may be summarized as follows:—

Operators' Licences.—The operator of a motor vehicle must be over a specified age (usually 18 years) and must carry a licence, obtainable only after prescribed qualification tests and renewable annually. Special licences are required for chauffeurs, beginners, and operators under 18 years of age who have become qualified.

Motor Vehicle Regulations.—In general, all motor vehicles and trailers must be registered annually, usually for the calendar year, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only, for the back, in the case of trailers). A change in ownership of the vehicle must be recorded with the registration authority. However, exemption from registration is granted for a specified period (usually at least 90 days) in any year to visiting private vehicles registered in another province or a State which grants reciprocal treatment. Further regulations require a safe standard of efficiency in the mechanism of the vehicle and in its brakes, and provide for its equipment with non-glare headlights and a proper rear light, with a satisfactory locking device, a muffler, a windshield wiper, and a rear-vision mirror.

Traffic Regulations.—In all the provinces, vehicles keep to the right-hand side of the road. Motorists are everywhere required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. While permissible speeds vary in different provinces, slower speeds are always required in cities, towns and villages, in passing schools and public playgrounds, at road intersections, railway crossings, or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. Motor vehicles must not pass a street car which has stopped to take on or discharge passengers except where safety zones are provided. Accidents resulting in personal injury or property damage must be reported to a provincial or municipal police officer and any driver involved must not leave the scene of accident until he has rendered all possible aid.

* Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch publishes an annual report on The Highway and Motor Vehicle in Canada.

† The information in this Section has been revised from material provided by the officials in charge of the administration of Motor Vehicle and Traffic Acts and Regulations in the individual provinces.

Penalties.—These ascend in scale from small fines for minor infractions of any of the regulations to a suspension of the operator's driving permit, impounding of the car or imprisonment for serious infractions, recklessness, driving without an operator's licence, and especially for attempting, while intoxicated, to operate a motor vehicle.

There is wide variation in the different provinces regarding the basis of licences and fees, the regulation of public commercial vehicles, details of traffic rules, speed, and the use of motor vehicles, that it is impossible even to outline them satisfactorily in the space available here. The most important features are summarized in the annual bulletin referred to in the headnote to this Section, p. 665. The authorities responsible for the administration of motor vehicles and the legislation governing vehicles and traffic are given below for each province.

Prince Edward Island.—*Administration.*—The Provincial Secretary, Charlottetown. *Legislation.*—The Highway Traffic Act (c. 1, 1930) and amendments.

Nova Scotia.—*Administration.*—Motor Vehicle Branch, Department of Highways, Halifax. *Legislation.*—The Motor Vehicle Act (c. 6, 1932) and amendments.

New Brunswick.—*Administration.*—Motor Vehicle Branch, Department of Public Works, Fredericton. *Legislation.*—The Motor Vehicle Act (c. 20, 1934).

Quebec.—*Administration.*—Motor Vehicle Bureau, Office of the Provincial Treasurer, Quebec. *Legislation.*—The Motor Vehicle Act (c. 35, R.S.Q. 1925) and amendments.

Ontario.—*Administration.*—Motor Vehicles Branch, Department of Highways, Toronto. *Legislation.*—The Highway Traffic Act (c. 251, R.S.O. 1927) and amendments.

Manitoba.—*Administration.*—Municipal Commissioner, Tax Commission Office, Winnipeg. *Legislation.*—The Highway Traffic Act (c. 19, 1930) and amendments.

Saskatchewan.—*Administration.*—Motor Licence Office, Department of Highways, Regina. *Legislation.*—The Vehicles Act (c. 68, 1935).

Alberta.—*Administration.*—Motor Vehicle Branch, Department of the Provincial Secretary, Edmonton. *Legislation.*—The Vehicles and Highway Traffic Act (c. 31, 1924) and amendments.

British Columbia.—*Administration.*—Motor Vehicle Branch, Commissioner of Provincial Police, Victoria. *Legislation.*—The Motor Vehicle Act (c. 50, 1935) and the Highway Act (c. 24, 1930) and amendments.

Yukon.—*Administration.*—Territorial Secretary, Dawson, Yukon. Information regarding regulations may also be obtained from the Bureau of Northwest Territories and Yukon Affairs, Department of Mines and Resources, Ottawa. *Legislation.*—The Motor Vehicle Ordinance, No. 14, 1914, and amendments.

Section 2.—Roads and Vehicles.

The facilities for road transportation are dealt with in two subsections devoted, respectively, to roads and highways and to motor vehicles.

Subsection 1.—Roads and Highways.

Historical.—A brief description of the early colonization roads in Canada was given at p. 733 of the 1934-35 Year Book.

Recent Highway Development.—With the rapid increase in the percentage of motor-car owners to the population (see pp. 668-669) the demand for improved roads has become more and more insistent since the War. Furthermore, the advantages to be gained by attracting touring motorists have been a powerful incentive to governing bodies to improve trunk roads and scenic highways within their jurisdictions. One sphere where the motor car has been of special economic advantage has been in rural areas, where its speed and economy are a great improvement over the old horse-drawn vehicle. As a result, in the Census of 1931 every second farm reported a farm-owned motor vehicle (1.96 farms per farm-owned motor vehicle). This widespread rural ownership of automobiles has resulted in the improvement of secondary rural roads.

A table of road mileage in Canada follows. For the first time an effort was made to collect statistics of urban streets and roadways for 1935. Preliminary figures of these urban roads give a total of 10,960.5 miles of which 3,564.8 miles were in Ontario. However, since there will inevitably be some revision of these urban mileages later, they are not included in the following table. The rural roads average about one mile of road for each 10 rural inhabitants or for each 26 persons, both rural and urban. There are great stretches of country in the northern portions of Quebec, Ontario, the Prairie Provinces, and British Columbia with very few people and very few roads, but the southern portions are well supplied. The Trans-Canada highway is now under construction, running from the Atlantic to the Pacific oceans entirely in Canadian territory.

Subsection 2.—Motor Vehicles.

Registration.—The increase in the use of motor vehicles in Canada has been very rapid; this is shown by the statistics of Table 2. In Table 3 the numbers of motor vehicles registered in 1934 and 1935 are given by provinces, classified as passenger cars, commercial cars or trucks, motor buses, and motor cycles.

The average population per vehicle registered was 9.3 in 1935. Canada ranked fourth in this respect, the United States being first with 4.9. On the basis of the total registration of 1,176,116, only three countries had larger numbers in 1934, *viz.*, United States, 26,221,052; France 2,065,200; and Great Britain and Northern Ireland, 2,043,450.

2.—Numbers of Motor Vehicles Registered in Canada, by Provinces, calendar years 1901-35.

NOTE.—Registrations given here include passenger cars, trucks, buses, motor cycles, service cars, etc., but not trailers or dealers' licences. Registrations in Yukon are included in the total for Canada.

Apparent Consumption of Automobiles in Canada.—The apparent consumption of automobiles in Canada in any year may be computed by deducting the number exported from the sum of the production and imports. Prior to 1925 the figures of apparent consumption do not show a pronounced trend but between 1925 and 1929 they increased substantially. From 1929 to 1932 the decrease was rapid and continuous but was practically halted in 1933, in which year production showed some improvement but mainly on account of the export demand. In 1935 the apparent consumption showed an increase of 48 p.c. over the figure for 1934.

Section 3.—Finances of Road Transportation.

The cost of road transportation to the people of Canada might be summarized under the following headings: expenditures on roads and highways; expenditures of individuals and corporations upon owned motor vehicles; and expenditures for freight and passenger services rendered by motor vehicle public carriers such as taxi, bus, and motor transport companies. Since expenditures on roads and highways are made almost entirely by governmental bodies, fairly complete statistics are available regarding them, but, owing to the tremendous number of individuals and organizations which would have to be canvassed, no statistics are available regarding expenditures under the other two headings. By applying theoretical unit values to the automobiles registered, an estimate may be obtained of their total value. This was done in computing the national wealth of Canada on pp. 882-883 of the 1936 Year Book. The estimates given for the value of automobiles registered were \$690,000,000 for 1929 and \$392,000,000 for 1933. (See also p. 862 of this Vol.)

The annual expenditure for the purchase of new motor vehicles is given for the years 1930 and since 1932 in the chapter on Internal Trade at p. 620. Unfortunately, this series as yet covers only a few years, several of which were years of depression, so that its significance will increase with a longer and more representative period. The retail value of new cars sold in 1932 was \$45,261,000, while in 1936 it had risen to \$120,049,000. The average for the six years, 1930 and 1932-36, was \$85,076,000.

Some indication of the annual expenditures for the servicing of motor vehicles may be obtained from the statistics of retail merchandising appearing on pp. 620-621. Sales of gasoline are given on p. 674. No statistics are available regarding the earnings of motor transport and bus companies.

Expenditures on Roads and Highways.—Roads in Canada, except in the Territories and the National Parks, are under the jurisdiction of provincial and municipal authorities. Unfortunately, there are no comprehensive or comparable statistics available regarding expenditures prior to 1928. Expenditures by the Dominion Government have taken the form of subsidies to the provinces for specific highways and have been made under the Canada Highways Act, 1919, (see p. 669 of the 1929 Year Book) largely in the few years immediately after the War and under relief legislation during the depression, to aid in providing useful employment. The present report includes expenditures on roads in the National Parks by the Dominion Government, also those on road construction work undertaken through the Department of National Defence to relieve unemployment in the western provinces. These expenditures, direct and as road subsidies, are shown in Table 5. The net expenditures here are the expenditures less subsidies received or collectable. They cover only national and provincial highways, secondary highways and other important roads to which the Provincial Governments contribute, together with the bridges or ferries necessary to such highways. The figures do not include expenditures on roads or streets within urban municipalities, nor expenditures by rural municipalities on local roads to which no contribution is made by the Provincial Governments. Expenditures for both construction and maintenance of municipal roads receiving subsidies are often made over and above the amounts upon which subsidies are granted and these extra expenditures are not included. Although the record of expenditures on roads by municipalities is incomplete, the expensive roads to construct and maintain are under provincial jurisdiction, so that only a small percentage of the total expenditures is omitted. In the Maritime Provinces all road expenditures are made by the Provincial Governments.

In accordance with an agreement of the Conference of British Commonwealth Statisticians, which met in Ottawa in 1935, an effort was made to collect statistics regarding urban streets and roadways in 1935. The resulting statistics appear in an appendix to the report on The Highway and Motor Vehicle in Canada, 1935, issued by the Bureau of Statistics. As these first results are considered preliminary, they are not included in the table. The total was \$10,773,000, of which \$2,691,000 was new construction and major improvements.

Provincial Funded Debt Incurred for Highways.—Table 6 shows the funded debts of the provinces incurred for highway development. These amounts should not be confused with estimates of the total investment in highways. The

cost of constructing a new road is considerably greater than that of putting a permanent surface on an old road; the latter has been the purpose of much of the provincial expenditure.

6.—Provincial Government Funded Highway Debt and Annual Charges Thereon, 1933-35.

NOTE.—Provincial Governments report for years ended at various dates. The figures given here are for the reported years approximating most nearly to the calendar year stated.

Provincial Government Revenue.—The taxation of motor vehicles, garages, chauffeurs, etc., is becoming a lucrative source of Provincial Government income. In every province the following licences or permits, duly issued by the provincial authorities, are required: motor vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages, and gasoline and service stations. A sales tax on gasoline is also levied by each province. The following table shows the provincial revenue for the years 1934 and 1935, indicating, at the same time, the more important sources from which it is derived. Dominion Government revenues from import duties, excise, and sales taxes are not included.

7.—Provincial Revenues from the Taxation of the Distribution and Operation of Motor Vehicles, calendar years 1934 and 1935.

Section 4.—Road Traffic.

Up to the present the motor vehicle has affected the passenger traffic of the steam and electric railways more than the freight. This diversion of passenger traffic has been effected largely by the private automobile, although the motor bus is rapidly becoming more important and is now operating between all large centres. The motor truck is also carrying an increasing amount of freight, although no statistics showing the tonnage handled are as yet available. The difficulties of collecting statistics from the very large number of operators concerned are obvious.

Widely differing opinions are held regarding the extent to which the motor vehicle has cut into railway traffic.* A definite conclusion cannot be reached until reliable statistics regarding motor vehicle traffic are available. While undoubtedly the passenger motor vehicle now carries a certain amount of passenger traffic which would otherwise be carried by steam or electric railways, the error should be avoided of considering all the passenger movement by motor vehicles as a loss to the railways. Much of that movement is due to the convenience and cheapness of motor vehicle travel and would not take place at all under less favourable circumstances.

Similar considerations apply also, though less importantly, to freight moved by motor trucks. Part of the short-haul truck traffic has displaced the horse-drawn vehicle rather than the railway. Furthermore, traffic diverted from the railways to motor vehicles has been offset to some extent by new traffic for the railways created by the automobile industry, consisting of raw and finished products of manufacture, motor fuel and oil, and materials for construction and maintenance of roads suitable for motor travel.

On the other hand, a phase of this new competition with railway transportation has been its effect on freight rates. The railway rate structure took into consideration the value of the goods handled, *i.e.*, bulk and low-value commodities were carried at relatively low rates, while manufactured and high-class commodities were at higher rates, the difference in rates having little relation to the difference in costs of transportation. Such a structure allowed raw materials to be moved cheaply and the railways were compensated by higher rates on the finished com-

* Counsel for the railways before the Transport Committee of the Senate of Canada presented arguments showing a serious loss of revenue by the railways from motor vehicle competition. On the other hand, if conditions of motor traffic in Canada may be assumed to be similar to those of the United States, in *Automobile Facts and Figures*, 1936, published by the Automobile Manufacturers' Association, estimates of railway and motor traffic are given which, in the field of freight movement, rather minimize the seriousness of the motor truck competition.

modities. The motor truck is changing this; the motor truck operator carries these high-class commodities at rates closer to actual costs and does not attempt to carry raw materials except in special cases. His costs are reduced by a right-of-way being supplied for which he pays only a part of the cost and, if his rates are much above the actual cost, the manufacturer can quite easily supply his own transportation. Some branch lines of the railways are practically deserted except for a short time each year when snow interferes with motor vehicle operation. Consequently, railway losses include both losses from freight diverted and also from reductions in rates for high-class freight in attempts to retain such traffic without compensating increases in low-class freight rates.

Gasolene Consumption.—All provinces require retail sales of gasolene to be reported and a tax is imposed on all gasolene consumed by motor vehicles using the highways and streets and also on that used for an increasing number of other purposes. The taxable gasolene is, however, still largely consumed by motor vehicles and indicates in a general way the increase or decrease in the use of motor vehicles. Net sales are the differences between the total or gross sales reported and the quantities on which the tax is refunded in whole or in part, or on which the tax is not imposed at the time of sale.

¹ Revised since the publication of the 1936 Year Book.

Motor Vehicle Accidents.—Motorists are required to report accidents but comprehensive statistics are not available in all provinces. The Vital Statistics Branch of the Bureau of Statistics compiles statistics on all deaths from motor vehicle accidents and these are shown in Table 9. A direct comparison of such statistics between the provinces is of little value due to differences in size, population, motor vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor vehicles has also been tabulated. Although this treatment puts the data on a better footing than the absolute figures, it still gives no weight to differences in use of motor vehicles, differences in climate, roads, tourist cars, etc., all of which are factors in accidents.

Table 10 shows the number of persons killed or injured in automobile accidents as reported by the motor vehicle branches of the Provincial Governments. It is quite possible that the latter reported some persons as injured who subsequently died from the injuries and these would be included in the fatalities of the vital statistics shown in Table 9; also accidents might occur late in December and resulting deaths might be charged to December by the provincial authorities but to January of the next year in the vital statistics. Consequently, these data do not agree.

PART IV.—WATERWAYS.*

Under this heading in the present edition of the Year Book the statistics relating to shipping, aids to navigation, canals and harbours, which were formerly treated separately, are brought together because they are all essential and integral parts of the facilities for water-borne traffic. Any two or more of these developments in aid of water traffic may facilitate the handling of the same freight without transshipment intervening. Under this revised treatment all the facilities for water-borne traffic are first presented, then the cost or other available financial statistics and, finally, figures which give some indication of the traffic handled. The general aim of the revision is to present a rounded picture of water transportation, rather than details of the activities of Government Departments dealing with certain phases of it.

Section 1.—Equipment and Facilities.

The developments and equipment to facilitate water traffic are classified under the sub-headings of shipping, aids to navigation and miscellaneous works, canals, and harbours. A subsection is added giving figures of administrative activities regarding steamship inspection, personnel, and accidents to shipping.

Subsection 1.—Shipping.

Although a large part of the water-borne traffic, especially inland and coast-wise, is carried in ships of Canadian registry, the commerce of the Dominion is by no means entirely dependent upon Canadian shipping since all waterways, including canals, and inland lakes and rivers, are open upon equal terms, except in the case of the coasting trade, to the shipping of all countries of the world.

For a record of the number and tonnage of ships engaged in the carrying trade of Canada, see the tables under Section 3 (pp. 690-701) of this Part of the chapter. The tables are included there under traffic statistics because they are considered as of more value as regards the traffic carried than merely as regards the shipping available. For a record of the ships annually built and registered in Canada or sold abroad, see the Shipping Report of the Department of National Revenue. For an account of the shipping services operated by the Dominion Government, see pp. 689-690.

* Information and statistics dealing with the indicated subject have been supplied as follows: aids to navigation, harbours, administrative services, and Government merchant marine, by the Department of Transport; shipping, by the Department of National Revenue; graving docks and part of the financial statistics, by the Department of Public Works; Panama Canal, by the Governor of the Panama Canal Zone; and other canal traffic, by the Transportation and Public Utilities Branch, Dominion Bureau of Statistics.

1.—Numbers and Net Tonnages of Vessels on the Registry of Shipping of Canada, by Provinces, Dec. 31, 1926-35.

Subsection 2.—Aids to Navigation and Miscellaneous Works.

Included under this heading are the lighthouses and the whole system of marine danger signals on the east and west coasts of Canada, on Hudson bay and strait, the St. Lawrence river and gulf, the inland rivers and lakes and at the entrances to harbours—a very extensive system designed to provide safe navigation in all Canadian waters. In addition, a pilotage service is maintained in waters where navigation is difficult. As a further aid to safe navigation, there are chains of radio signal and direction-finding stations which are described under that section of this chapter dealing with radiotelegraphy, on pp. 716-718.

2.—Comparative Statement of Marine Danger Signals, fiscal years ended Mar. 31, 1925-36.

NOTE.—In addition to the aids to navigation listed in the following table, approximately 9,205 unlighted buoys, balises, dolphins and beacons are maintained. The figures are supplied by the Department of Transport.

A great deal has been done to improve navigable waters by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Probably the largest task of this nature has been the St. Lawrence River Ship Channel. An extensive floating plant is in service to maintain and improve the deep-water channel from Montreal to the sea for ocean-going shipping. Incidental to these developments of navigable waters are works to guard shore lines and prevent erosion, and also the control of roads and bridges which cross navigable channels. In order to prolong the season of navigation in important waters which freeze over in winter, ice-breaking operations are carried on at both the beginning and end of winter. This is particularly the case in connection with sea-going shipping from Montreal.

3.—Duration of the Season of Open Navigation in the St. Lawrence Ship Channel, calendar years 1911-36.

NOTE.—For the years 1882-1910, see Canada Year Book, 1934-35, p. 756.

¹ A channel clear of ice is signalized by the arrival of an ice-breaker at Victoria pier, Montreal.

Subsection 3.—Canals.

Before the period of extensive railway construction which commenced for Canada in the 1850's, the water routes, more especially the St. Lawrence, the Great Lakes and the Ottawa, were the chief avenues of transportation. These routes were interrupted at certain points, necessitating portages, and to eliminate the toil of unloading, transporting and reloading at the portages the canals of Canada were constructed.

The earliest mention of canals in Canada is in connection with the Lachine canal, begun by early French settlers in 1700, but only after the conquest of Canada by the British were improvements of the main water routes made, and in the early part of the 19th century increased internal and foreign trade and the introduction of steam navigation resulted in more attention being given to this work. Although some of the early canals were constructed primarily for military purposes they soon became essential to the commercial life of the country. However, since the development of railways in Canada, and even more since the growth of motor vehicle traffic, the canals, with the exception of those on the Great Lakes and St. Lawrence river, are playing a minor part in the transportation activities of the country.

There are in Canada seven canal systems under the control of the Dominion Government in connection with navigable lakes and rivers. They consist of the canals: (1) between Port Arthur or Fort William and Montreal; (2) from Montreal to the International Boundary near lake Champlain; (3) from Montreal to Ottawa; (4) from Ottawa to Kingston and Perth; (5) from Trenton, lake Ontario, to lake Huron (not completed); (6) from the Atlantic ocean to Bras d'Or lakes, Cape Breton; and (7) from Winnipeg to lake Winnipeg. By means of these canals a total waterway of 1,846 miles has been opened to navigation, the actual mileage of canals being 509.40.

A detailed description of the individual canals was given on pp. 626-629 of the 1926 Year Book. Summary statistics of their length and lock dimensions are given in Table 4.

¹ Navigable depths are occasionally less at times of extremely low water.

² Minimum depth

between locks 25 feet. ³ With lake Ontario at elevation 244 feet above sea-level.

Subsection 4.—Harbours.

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the seaboard and inland ports. Much equipment designed to facilitate interchange movements is provided by the harbours. This harbour equipment includes the necessary docks and wharves, some for passenger traffic but most of

them for freight, warehouses for the handling of general cargo and special equipment for such bulk freight as lumber, coal, oil, grain, etc. Equipment may include cold storage, harbour railway and switching connections, grain elevators, coal bunkers, oil storage tanks, and, in the main harbours, dry-dock accommodation.

Seven of the principal harbours of Canada are under the administration of the National Harbours Board, as explained below. Some other harbours are administered by commissions which include municipal as well as Dominion Government appointees, while the remainder are administered by harbour masters directly under the authority of the Department of Transport.

In addition to the harbour facilities owned by the National Harbours Board or other operating commission, at most ports, there are dock and handling facilities owned by private companies such as railways, pulp and paper, oil, and sugar industries, etc. At a number of ports there are also graving docks which are dealt with separately below.

It is not possible at present to compile comparable representative statistics regarding the equipment of the leading ports of Canada but with the consolidation of control under the Department of Transport, such statistics should be available in the near future.

National Harbours Board.—Prior to October, 1935, the seven national harbours of Canada—Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal, and Vancouver—were under the management and control of separate Harbour Commissions, each consisting of three persons appointed from the immediate locality. Orders in Council were passed on Oct. 31, 1935, accepting the resignations of the individual Harbour Commissions, and other Orders in Council passed as of the same date vesting in a single Board of three Harbour Commissioners the powers and responsibilities inherent in each of the seven former commissions. In this way effect was given to the more important recommendations of Sir Alexander Gibb, following his survey of national ports in 1931.

During the 1936 session of Parliament, the individual Acts relating to the administration of these ports were repealed and a single uniform Act (c. 42) substituted, placing the general direction and control of the national ports referred to under a single National Harbours Board, leaving the local administration in the hands of a port manager responsible to the Board. This legislation became effective on Oct. 1, 1936.

The headquarters of the National Harbours Board is at Ottawa, and, under the Minister of Transport, the Board is responsible for the administration, maintenance and control of the seven ports referred to, as well as any other harbour property which the Governor in Council may transfer to the Board for administration. Engineering works, heretofore under the direction of small local staffs, are now looked after by the departmental engineering services, while local direction devolves upon competent port managers with a proper background of experience. The financial control of each port is under the direction of the Comptroller of the Treasury and subject to audit by the Auditor General of Canada. Accounting for each port is, however, to be carried out at the port, and funds earned at one port will not be diverted for use elsewhere.

Public Harbours and Harbour Masters.—In the smaller maritime communities, the Governor in Council, as formerly, may create public harbours by proclamation, as provided by Part X of the Canada Shipping Act (c. 44, 1934), and the Minister of Transport may, from time to time, appoint harbour masters

for these smaller ports, who will administer the same under rules and regulations approved by the Governor in Council. Remuneration of these harbour masters will be from fees levied on vessels under the terms of the Act.

Graving Docks.—The Department of Public Works of the Dominion Government has constructed five dry docks, which are shown in Table 5. The dock at Kingston, Ont., is under lease to the Kingston Shipbuilding Company, while the old Esquimalt Dry Dock was temporarily transferred to the Department of National Defence on Nov. 1, 1934. This transfer is to be effective until such time as the dock is commercially required, when it will be returned to the control of the Department of Public Works. The large dry docks at Lauzon, Que., and Esquimalt, B.C., can be divided into two parts and were built at a cost of approximately \$3,850,000 each. Under the Dry Dock Subsidies Act, 1910 (9-10 Edw. VII, c. 17), several docks have been subsidized by payments of 3 to 4 p.c. per annum on the original cost for a given number of years, as shown in Table 6.

North Vancouver, B.C. (floating dock).....	556-5	98	28	2,500,000	4½ p.c. for 35 years.

¹ Subsidy payments on these two dry docks have been completed.

Subsection 5.—Government Administrative Services.

The services covered by this subsection are those dealing with the inspection of steamships, with sea-faring personnel, and with accidents to shipping.

Steamboat Inspection.—The Steamboat Inspection Service of Canada, maintained under the authority of the Department of Transport, comprises the Board of Steamboat Inspection, together with staffs of inspectors at the principal ocean and inland ports. The Board decides on the standards required of all vessels coming under its jurisdiction. These must be attained by all ships given official warrant as to their seaworthiness and mechanical condition. Regulations for the issue of safety certificates under the International Convention for the Safety of Life at Sea were approved by Order in Council of Oct. 18, 1934, and are now being administered by the Board.

The Board is also responsible for the examinations for competency of marine engineers, and grants certificates of competency to successful candidates.

Wrecks and Casualties.—The figures of Table 9, supplied by the Department of Transport, apply to vessels of every nationality in respect of wrecks and casualties in Canadian waters, and to Canadian vessels in respect of wrecks and casualties in other waters. The returns in some years cover wrecks and casualties of previous years.

9.—Canadian Wrecks and Casualties, years ended June 30, 1911-17, and calendar years 1918-35.

NOTE.—For details of the years 1870-1910, see Canada Year Book, 1911, p. 381.

² Excluding damage to cargo. ³ Includes 328 lives lost in the *Princess Sophia* disaster.

Section 2.—Financial Statistics of Waterways.

The principal statistics available to aid in making an appraisal of the cost of water-borne traffic consist of the record of public expenditures on waterways. Such expenditures are classified as investments which are shown in Table 10, and as annual expenditures for maintenance and operation, shown in Table 11, which are partly balanced by the revenues shown in Table 12. Undoubtedly, insofar as capital expenditures for the permanent improvement of waterways are concerned, those of the Dominion Government cover the major part. There has been some expenditure by municipalities on local harbour facilities, while private capital expenditure is also confined almost entirely to terminal or dockage facilities. The investment in shipping, however, with the exception of the Canadian Government Merchant Marine and the Canadian National (West Indies) Steamships, as shown at pp. 689-690, has come almost entirely from private sources such as railway companies, steamship companies, industrial corporations, and private individuals. No figures are available regarding private investments in shipping except those appearing in the reports of the operating companies which cover only a portion of the field. Neither are there statistics showing the revenues of ship operators from passenger and freight traffic. In the case of railways, statistics show fairly completely: (1) the investment in plant, roadbed, etc.; (2) the revenues of the railways or the annual payment by the people of Canada for the passenger and freight transportation; and (3) the annual deficits which are also indirectly paid by the public whether as investors or taxpayers. No such picture can be given for water-borne traffic.

Capital and Operation Expenditures.—In the following statement of investments by the Dominion Government, no amounts have been written off because of the destruction or abandonment of property such as the first, second, and third Welland canals and the Port Nelson terminals. Neither have the capital expenditures been reduced by allowances for depreciation.

The classification as between capital and operation expenditure is very difficult to make with respect to some items and cannot be regarded as minutely exact for the long period. This difficulty applies particularly in the case of dredging where the distinction between the removal of accumulating silt and the deepening of a channel is largely one of opinion. For this reason the dredging account of the Department of Public Works is not included in the total investments of Table 10,

but is given at the end of the table since a large part of the work has been undoubtedly of the nature of a permanent improvement. This dredging account does not, however, include the total expenditures for dredging as some dredging expenditures have been distributed with other items. Both capital and operation costs include expenditures by the former Departments of Marine and of Railways and Canals, now the Department of Transport, and by the Department of Public Works.

10.—Capital Expenditures of the Dominion Government on Aids to Navigation, Canals, and Harbours, to Mar. 31, 1936.

NOTE.—The dredging expenditures shown separately at the end of this table cannot be accurately divided between capital and maintenance expenditures. However, since they have been largely for permanent improvements, they are shown here but are not included in the grand totals of capital expenditure.

Revenue.—Table 12 shows the revenue accruing to the Departments of Transport (formerly the Departments of Marine and of Railways and Canals) and of Public Works from the operation of the waterways. No attempt has been made to collect from water traffic a return on the investment in waterways or the annual expenditure for their maintenance and operation. Since 1904 no tolls have been charged for the use of canals, whether by Canadian or foreign ships. The revenue arises from hydraulic, land, and other rents, elevator fees, earnings of steamers, graving docks, radio stations, etc. Since nearly all the chief ports are operated by the National Harbours Board or by separate commissions, the harbour dues accrue to those corporate bodies.

Shipping Subsidies.—The information given in the table below formerly appeared under the part of this chapter dealing with the Post Office but is now shown here because these subsidies are granted to assure the required steamship services rather than for the mere carriage of mails.

13.—Mail Subsidies and Steamship Subventions, fiscal years ended Mar. 31, 1934-36.

NOTE.—The figures in the following table were supplied by F. E. Bawden, Director of Steamship Subsidies, Department of Trade and Commerce. Such data appear annually in the annual report of the Auditor General and represent the amounts paid in connection with contracts made under statutory authority by the Department of Trade and Commerce for trade services, including the conveyance of mails.

Merchant Marine Services Operated by the Canadian Government.

Canadian Government Merchant Marine.—The circumstances under which the Canadian Government became possessed of and responsible for the operations of a merchant marine are explained on p. 776 of the 1934-35 Year Book.

This merchant fleet reached its greatest development in 1924 and at Dec. 31 of that year numbered 57 vessels of a total deadweight tonnage of 353,450, representing an original capital investment of \$79,661,921. At Dec. 31, 1935, the fleet comprised 10 vessels with a deadweight tonnage of 88,579, representing a capital investment of \$18,168,023. In addition to the capital outlay, the Government also advanced \$10,280,175 for working capital, etc. Operating income results from the date of the inception of these services have been as follows, exclusive of interest and depreciation on the original high cost of the vessels. Operating deficits are indicated by a minus sign:—

Calendar Year.	Operating Results.	Calendar Year.	Operating Results.
	\$		\$
1919.....	1,056,767	1928.....	-1,209,083

1927.....	-720,735	1936.....	303,505 ¹

¹ Part year only, as the fleet was disposed of under agreement of June 8, 1936.

The net cash deficit, 1921-36, inclusive, amounted to \$11,858,152, and interest due the government and unpaid \$8,426,637. The total book deficit of the Canadian Government Merchant Marine, at Dec. 31, 1936, was \$16,525,724.

By authority of Order in Council P.C. 1026, April 27, 1936, the 10 vessels comprising the Canadian Government Merchant Marine were, in virtue of an agreement dated June 8, 1936, disposed of to British shipping interests comprising the Ellerman and Bucknall Steamship Co., Limited, the Commonwealth and Dominion Line, Limited, and the New Zealand Shipping Co., Limited, the intention being to retire these vessels, which were nearing the end of their usefulness, and to provide faster and more suitable boats for the Australian service. The purchasing companies agreed to provide the service for a period of at least five years without government subsidy, and to take over the staff and crews, afloat and ashore. The sale was recommended by the Board of Directors of the Canadian Government Merchant Marine and the consideration was \$419,926.

Canadian National (West Indies) Steamships.—In conformity with the Canada-West Indies Trade Agreement Act of 1926 (16-17 Geo. V, c. 16), the Dominion Government has provided direct steamship services to the West Indies through the medium of Canadian National (West Indies) Steamships, Ltd. The service is provided by a fleet of eleven vessels of a total deadweight tonnage of 63,426. Five of these boats, known as the "Lady" ships, were specially constructed for passenger service on this route, while the remaining six vessels previously formed part of the Canadian Government Merchant Marine fleet, and were taken over by the Canadian National (West Indies) Steamships, Ltd., for operating purposes, under entrusting agreements with the respective companies which owned the ships.

The investment in vessels at Dec. 31, 1935, amounted to \$10,940,008, mainly made up of the construction cost of the "Lady" ships and the present-day valuation of the other six ships, together with the cost of conversion for use in the West Indies service of three of the latter. The financial results of the operations of the Canadian National (West Indies) Steamships, Ltd., have been as follows:—

Calendar Year.	Operating Revenues.	Operating Expenses.	Operating Net.	Depreciation.	Interest.	Book Loss.

Section 3.—Water Traffic and Services.

Complete statistics, comparable to those given for the railways, showing all the freight carried by water, are not available. Indeed it would be very difficult to obtain a record of the traffic handled by small independent coasting vessels. However, there is a record of the number and tonnage of ships calling at all ports and of all the cargoes which pass through the canals.

Subsection 1.—Shipping.

Canadian shipping may be divided into three classes: (1) ocean or sea-going shipping; (2) inland or rivers and lakes international shipping (exclusive of ferriage); and (3) coasting trade or coastwise shipping. Ocean shipping covers the sea-going vessels arriving or departing from Atlantic and Pacific Coast ports, including St. Lawrence River ports up to Montreal. Inland international shipping is the term used to cover shipping between Canadian and United States ports on the Great Lakes and international rivers, and on lakes and rivers accessible to shipping from United States ports such as the Ottawa, Rideau, Trent, etc. (Ferriage is, however, excluded from this and other classes of shipping.) Coastwise shipping or the coasting trade covers shipping between one Canadian port and another on the Atlantic coast, on the Pacific coast, and on the inland international lakes and rivers or lakes and rivers accessible to them. It does not, however, include shipping on isolated Canadian waterways, such as the Mackenzie river, lake Winnipeg, lake St. John, etc.

Ocean Shipping.—Canadian ocean shipping dates back to the days of early European fishermen who frequented the shores of Newfoundland and the Maritime Provinces. Later on exploration and settlement produced a larger volume of traffic. The first ocean-going vessels in Canada were probably built by Pont-Gravé, one of the first settlers in New France, and soon afterwards Talon and Hocquart, intendants of the colony, realizing the advantages offered to the industry by the timber resources available, gave it every encouragement. Shipyards were established at Quebec and other points along the St. Lawrence, and these, together with later establishments in the Maritime Provinces and on the western coast, have formed the principal bases of Canadian shipping on the Atlantic and the Pacific.

Canadian shipping attained some prominence in the days of fast wooden sailing vessels, and also at a later date when steam power first came into use. In 1833 the *Royal William*, a Canadian ship built to ply between Quebec and Halifax, crossed the Atlantic from Pictou to London, and was the first vessel to navigate the Atlantic entirely under steam power. At the present time, in addition to other lines, the

Canadian Pacific Railway and the Dominion Government operate fleets on the Atlantic and Pacific oceans.

The following table has been compiled from the Shipping Reports of the Department of National Revenue for the individual fiscal years.

11.—Sea-Going Vessels Entered and Cleared at Canadian Ports with Cargo and in Ballast, fiscal years ended Mar. 31, 1911-36.

NOTE.—This table is an enlargement of Table 57, p. 709, of the 1936 Year Book to include information contained in Table 58 of that edition. The figures are compiled from Statement 10 of the Shipping Reports of the Department of National Revenue. For the years 1868-1910, see Canada Year Book, 1911, p. 379.

¹Includes freight in both tons weight and tons measurement.

Inland Shipping.—Inland shipping is associated in its beginnings with the birch-bark canoe of the American Indian. Later the *bateau* and Durham boat came into common use after the migration of the U.E. Loyalists. In the absence at that time of any roads to make land travel possible, the St. Lawrence river and the Great Lakes formed the main highway to the interior. The route from Montreal to the Upper Lakes was broken at three places—from Montreal to Kingston transportation was by *bateau* or Durham boat; from Kingston to Queenston schooners were used; then there was the portage road from Queenston to Chippawa and, finally, schooner again to the destination.

In 1809, the *Accommodation*, the first Canadian steamship, was built for the Hon. John Molson, to run between Montreal and Quebec. On lake Ontario, the *Frontenac* was used from 1817 on a weekly service between York and Prescott and, following this beginning, came a period of great activity in lake and river shipping. In 1845, the *Gore* reached lake Huron by way of the Welland canal to carry on transport trade on the Upper Lakes, where previously there had not been enough traffic to support a large ship. Shipping on the Upper Lakes became brisker now, for there were settlers to be carried from Buffalo to the western United States and grain to be brought back. In this period Canadian shipping made its profit by carrying United States goods, for there was little traffic originating in the Canadian near-West.

Upon the advent of steam railways, water-borne traffic did not decrease but, on the contrary, increased, and at present the greater part of the western grain is shipped *via* the Great Lakes route to eastern ports. The iron ore and coal traffic between lake Superior and lake Erie is chiefly United States traffic and sometimes exceeds 80 million short tons in a year; the total traffic on these Upper Lakes alone is greater than that carried by all Canadian railways and about one-twelfth of that carried by all United States railways.

Totals of inland shipping are given for each fiscal year since 1923, and by provinces for the latest year, in Table 16, p. 695.

Coasting Trade.—This form of water-borne traffic has assumed great importance in Canada owing to the long coast lines on the Atlantic and Pacific oceans and along the Great Lakes and St. Lawrence River system. The movement of grain from Fort William and Port Arthur to Canadian ports on the Lower Lakes and to Montreal is one important factor in coastwise shipping. The registered tonnage of vessels engaged in the coastwise movement is shown for each fiscal year since 1923, and by provinces for the latest year, in Table 16.

Shipping by Ports.—The relative volume of shipping in the leading ports of the provinces of Canada is shown in Table 15. Details are given of the sea-going vessels, and of the total of all shipping (exclusive of ferriage) arrived at and departed from each port. In the fiscal year ended Mar. 31, 1936, the tonnage of sea-going vessels arriving at and departing from Vancouver exceeded that of any other port in Canada; Victoria was next, followed by Montreal and Halifax. In total shipping, which included coastwise and inland international as well as sea-going shipping, Vancouver was considerably in the lead, followed by Montreal, Victoria, and Halifax.

15.—Numbers and Tonnages of Sea-Going and of All Vessels (Exclusive of Ferriage), Entered and Cleared at each Principal Canadian Port, fiscal year ended Mar. 31, 1936.

NOTE.—For details of coastwise and inland international shipping at these ports and at all other ports of Canada, see the Shipping Report of the Department of National Revenue for the fiscal year ended Mar. 31, 1936.

¹ Since the ferry at Sarnia operates without a ferry permit, the "arrived" and "departed" figures for this port include ferriage to the amount of 14,583 vessels and 1,620,820 tons.

Grand Total Shipping Trade.—Statistics are given in Table 16 showing sea-going, inland international, coastwise and total vessels (exclusive of ferriage), entered and cleared at Canadian ports, by provinces, during the fiscal year ended Mar. 31, 1936, and totals for the fiscal years 1923 to 1936. It is noteworthy in this table that the volume of coastwise shipping is the greatest, while sea-going is next in tonnage. Both sea-going and coastwise shipping show marked expansion since 1923, although the effect of the depression is evident here also. Inland international shipping, on the other hand, has varied considerably and showed a more definite decrease during the depression. The total tonnage of shipping entered and cleared was greater for Ontario than for British Columbia in the fiscal year ended 1936. This was due to the fact that the great bulk of the inland international shipping was through Ontario ports, while there was also a large tonnage of coasting trade through these ports. It will be noted, too, from the footnotes, to Tables 15 and 16 that a certain amount of ferriage, at Sarnia, is included in the Ontario figures. Ontario came first in total shipping in 1936, followed by British Columbia, after which came Quebec, Nova Scotia, and New Brunswick.

¹ The Ontario figures and the totals for Inland International and Total Shipping are inclusive of ferriage "arrived" and "departed" of: 13,180 vessels and 1,415,612 tons for 1934; 13,444 vessels and 1,433,031 tons for 1935; and 14,583 and 1,620,820 tons for 1936. Corresponding deductions for earlier years are not available. (See also footnote 1 to Table 15.)

Subsection 2.—Canal Traffic.

Since the canals of Canada are open to the vessels and traffic of all nations upon equal terms, United States traffic constitutes an important part of the total carried through certain canals, especially the Welland canal. This is shown in Tables 17 and 20. More complete details of the traffic through canals may be found in the annual report on Canal Statistics published by the Dominion Bureau of Statistics.

17.—Total Traffic through Canadian Canals, by Nationality of Vessels and Origin of Freight, navigation seasons 1911-36.¹

NOTE.—For Canadian canal traffic from 1886 to 1899, see 1902 Year Book, p. 398, and for the figures for 1900-10, see the 1933 Year Book, p. 607.

¹ Totals include duplications where cargoes use two or more canals.² Revised since the publication of the 1936 Year Book.³ Includes a small percentage of ports of other foreign countries.

The canal traffic figures in the foregoing Tables, 17 to 20, include duplications where the same freight passes through two or more canals. Table 21 below eliminates most of this duplication for the St. Lawrence-Great Lakes system. Even in this analysis, however, grain traffic originating at Lake Superior ports and transhipped from upper lake to smaller boats at Port Colborne or other points on lakes Erie or Huron, is really a duplication although not appearing as such. The elimination of duplications for Canadian canals only, is not feasible because both Canadian and United States vessels use the locks on both sides of the river at Sault Ste Marie without the payment of tolls or other restrictions.

Totals.....	19,385,717	61,835,682	81,221,399

¹ Excluding duplications.

² Includes approximately 700,000 tons of freight using the locks at Sault Ste. Marie and transhipped at Port Colborne.

³ Includes both Canadian and United States canals at Sault Ste. Marie.

The Panama Canal.*—The Panama canal, which was opened to commercial traffic on Aug. 15, 1914, is a waterway which is destined to be of the greatest importance to the British Columbian ports, from which vessels now leave direct for Great Britain and European ports throughout the year. As an alternative route to that of the transcontinental railway lines, such a passage by water is of vital importance in the solution of the larger transportation problems of the continent, and while its influence is perhaps more potential than actual, such a check on trans-continental rail rates is a valuable one. During the War the great expectations based upon the opening of the canal were not realized, owing to the scarcity of shipping, but, with the post-war decline in ocean freight rates, an increase in traffic between our Pacific ports and Europe has taken place, and, while the proportion carried in vessels of Canadian registry is comparatively small, the cargo tonnage has nevertheless assumed considerable proportions.

Table 22 shows the amount of traffic originating in or destined for Canada carried through the canal. The greater importance of the route as one from Pacific to Atlantic ports is illustrated by the much larger volume of freight originating at western ports than at eastern ports, and the larger volume destined for eastern than for western Canadian ports. Strictly inter-coastal Canadian cargo during the latest year aggregated 119,577 long tons as compared with 89,444 long tons in 1935.

Subsection 3.—Harbour Traffic.

The freight movement through a large port takes a number of different forms. The overseas movement, *i.e.*, the freight loaded into or unloaded from sea-going vessels frequently constitutes a surprisingly small part of the total. Usually the volume coming in and going out by coastwise vessels is larger. Then there is the "in transit" movement in vessels which pass through the harbour without loading or unloading. Finally there is the movement from one point to another within the harbour, which in many ports amounts to a larger total than any of the other activities. In the past, these different forms of traffic have not been uniformly recorded for the various harbours of Canada, and therefore, it has been impossible to compile satisfactory or reliable statistics. With the consolidation of administrative activities in the Department of Transport, and the control of many of the leading ports in the National Harbours Board, an effort is being made to compile fairly satisfactory statistics regarding harbour traffic.

PART V.—AIR NAVIGATION.*

Aircraft furnish a rapid and convenient means of transportation for passengers and supplies to remote and unsettled areas. The use of aircraft has made possible the obtaining of accurate information for the development and conservation of natural resources in parts of Canada that would otherwise have been practically inaccessible. Air-mail and air-transportation lines and commercial services are increasing steadily in number and in the scope of their operations and usefulness.

* Descriptive and administrative information has been prepared from material supplied by J. A. Wilson, Controller of Civil Aviation, Department of Transport, while statistics have been compiled by G. S. Wong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics.

The treatment of air navigation in this part of the Year Book is confined to civil aviation; the military activities and organizations are dealt with under National Defence (see "Air Service" in the Index). The subject is introduced with a section dealing with the history and administrative control of civil aviation and this is followed by sections on facilities and equipment, finances and employees, and traffic, along the lines of the treatment adopted in this chapter for other forms of transportation.

The collection and compilation of statistics of civil aviation was transferred from the Branch of the Controller of Civil Aviation to the Bureau of Statistics in 1936. To preserve continuity with aviation statistics published in previous Year Books a statistical summary of civil aviation for the years 1931 to 1936 is given below in Table 1. The statistics collected for 1936 have been somewhat enlarged and consequently no comparisons with similar data for previous years can be made for items appearing in other tables of this Part.

1.—Statistical Summary of Civil Aviation in Canada, 1931-36.

NOTE.—Figures for 1921-23 may be found at p. 616 of the 1924 edition of the Year Book, for 1924-29 at p. 661 of the 1930 edition, and for 1930 at p. 698 of the 1936 Year Book.

¹ These figures show duplication, since practically all aeroplanes are convertible to float seaplanes.
² The basis of classification was changed in 1935. Figures on the old basis for 1929-34 will be found at p. 746 of the 1934-35 edition of the Year Book.
³ Commercial air traffic only.
⁴ Revised since the publication of the 1936 Year Book.

Section 1.—History and Administration.

Subsection 1.—Historical Sketch.

About the turn of the century Mr. W. R. Turnbull, who may be termed the "father of aeronautical research in Canada", was experimenting with aerofoils and propellers at Rothesay, New Brunswick, where, in 1902, he set up the first small wind tunnel in Canada. He discovered the laws of the centre of pressure movement on aerofoils, and made deductions from these laws which explained the longitudinal stability of aeroplanes. He also propounded the static laws of air propellers and in later years evolved and developed the controllable-pitch propeller.

At the time that Mr. Turnbull was beginning his work, Dr. Graham Bell was experimenting with kites and air-screws in laboratories at his summer home at Baddeck, Cape Breton Island. The "Aerial Experiment Association", formed in 1907, consisted of Dr. Bell, J. A. D. McCurdy and F. W. Baldwin, two young Canadian engineering graduates, Glen Curtiss, a motor cycle engine builder from New York State, and Lt. Selfridge, on leave from the United States army. As a result of the work of these associates, the first flight in Canada was made at Baddeck on Dec. 7, 1907, in the *Cygnet*, a tetrahedral kite, which was towed by a steam tug. on Feb. 23, 1909, McCurdy's aeroplane, the *Silver Dart*, was taken out for tests on the ice at Baddeck. With its designer as pilot and under its own power, it flew for half a mile, rising thirty feet above the ice. This was the first aeroplane flight by a British subject. The *Silver Dart* was an advance on any aircraft previously flown, notable features being a three-wheel undercarriage, tapered wings, and the use of aileron controls.

Progress was rapid throughout the civilized world in the development and design of heavier-than-air flying craft from 1908 to the outbreak of the War, and this progress was accelerated during the War by the intensity of competition for superiority in the air, and by the wide field for experiment which the war activities provided. Officially, Canada took little part in these developments. However, many young Canadians entered the flying service of Britain and, to facilitate their recruitment and preparation, training units were established in Canada. To provide the aircraft for training purposes, Canadian Aeroplanes, Limited, was organized by the Imperial Munitions Board and, by the end of the War, no less than 2,900 planes had been built by this industry. In the latter part of the War, owing to the extension of submarine raiding to the Atlantic coast of America, a Royal Canadian Naval Air Service was organized to patrol the coasts of the Maritime Provinces and the gulf of St. Lawrence. Bases were established at Halifax and Sydney, and patrols inaugurated on Aug. 25, 1918.

At the end of the War thousands of young men with training and experience in the British flying services returned to Canada, full of enthusiasm for aviation, and seeking an opportunity to apply their new knowledge to peace-time developments. At the same time, governments were disposing of their surplus stocks of planes at bargain prices. Action was necessary to supervise and control aviation in Canada. The Air Board was appointed in June, 1919, with authority for the full regulation of civil aeronautics. Branches were organized to deal with licensing of aircraft and personnel, to conduct flying operations for other Government services, and to provide technical services.

The immediate post-war circumstances of a large number of trained pilots and many surplus aircraft resulted in great activity in flying. However, much of this was in the form of exhibition flying, joy-riding and flying instruction. Patronage of

these activities soon waned as the novelty of flying wore off among the general public. However, the foundations for real progress were laid by a few more far-sighted men who sought to apply the facilities of aircraft to real practical purposes in forest reconnaissance, surveying, and transportation in inaccessible areas of country. In the summer of 1919 successful flights were made for forest protection and survey work at Lac à la Tortue in Quebec. In the summers of 1920 and 1921 bases were established by the Air Board, with provincial co-operation, at various points across Canada from which forest patrols and survey work were carried on. In addition some large corporations such as the Laurentide Company and Price Brothers established their own air services for forest patrol, surveys and transportation. The discovery of crude oil at Fort Norman on the Mackenzie river in the fall of 1921 led to the first large-scale attempt to establish air transportation in the far north by the Imperial Oil Company. As a result of the development of mining activity at Rouyn in northwestern Quebec, the first regular freight and passenger air transport service was inaugurated in 1924 by the Laurentide Air Services, Limited.

From these beginnings the expansion has been rapid. The speed and ease of air transport played a very important part in the expansion of mining activity during recent years throughout many areas of the Canadian Shield. Aircraft have been regularly used all across Canada for forest sketching, patrol and fire suppression, while very large areas have been mapped each year by aerial photography. The basic reasons for this progress of flying in the north country are simple. The only alternative means of transportation in many cases—the canoe in summer and the dog team in winter—are arduous, tedious, very costly and slow for long distances. Furthermore, the lakes which dot the country everywhere provided from the first readily available landing places for aircraft equipped with floats in summer and with skis in winter. The flying could all be done in daylight hours and trips could generally be postponed if weather conditions were unfavourable. As a result commercial flying throughout the north country has been able to supply a very real economic service and to show substantial progress without governmental subsidies of any kind, while numerous governmental functions are being carried out with increased efficiency and economy through the aid of flying.

The situation was wholly different in the older settled parts of Canada. Here other forms of dependable and efficient transportation were already in existence and in some phases over-developed. The only advantage flying could offer was a saving of time, and to effect this an elaborate system of ground facilities was necessary. On account of the expense entailed, the development of inter-city air transportation was left in abeyance at first until progress elsewhere would give a clearer indication of its success and value. However, the success of inter-city air services in Europe and the steady growth of the United States airway system led to a reconsideration of Canada's position in 1927. As a step in establishing a chain of airports across Canada and also to provide for the training of personnel, the flying-club movement was started with the offer of government grants and gifts of aircraft. Twenty-three flying clubs were established in the principal cities of Canada in 1928 and 1929. Aerodromes established by municipalities or by these flying clubs formed the nucleus for the Trans-Canada airway, the Dominion Government having to provide intermediate landing fields, especially through the Rocky mountains and across northern Ontario, and the weather-reporting, lighting, and radio services.

Mention has already been made of the administration of aviation under the Air Board immediately after the War. At the beginning of 1923, in the unification of the defence forces under the Department of National Defence, the Air Board was

abolished and the administration of aviation was placed under the new Department. At this period when both military and civil flying services were small and in the early stages of their development, the advantages of combining their administration in one department were manifest. However, the two functions inevitably developed along different lines, these differences applying both to types of aircraft and to training of personnel. With the growth of both military and civil flying, their administration in one department became less convenient and stability in the administration of aviation in the Dominion was finally reached in the autumn of 1936 by the complete separation of the military and civil functions, the latter being transferred to the new Department of Transport. Civil aviation has now become so important a part of the transportation facilities of Canada that it can best be administered by the Department which deals with railway, shipping, and highway services, to which aviation is complementary.

Subsection 2.—Administration.

Civil aviation, previously administered by the Department of National Defence, is now a function of the Department of Transport, created in November, 1936.

The administrative duties under the Controller of Civil Aviation include the inspection and registration of aircraft and air harbours, the licensing of commercial and private air pilots, air engineers and air navigators. In addition to these duties, the location and construction of air routes and any matters connected with airship services are administered in this Branch.

Provincial Government Operations.—The Ontario Provincial Air Service owns 18 aircraft, which are operated by the province in the work of forest fire protection, transportation, air photography and sketching in northern Ontario. Operations cover an area approximately 800 miles from east to west and 400 miles from north to south. The Manitoba Government Air Service, operated in 1936, 5 aircraft on forest protection in the province for the Forestry Branch. The Saskatchewan Government Air Service operated 4 aircraft in the province on special work for the Department of Natural Resources. The British Columbia and Quebec Governments contracted with commercial aircraft operators for their flying requirements.

Commercial Aviation.—During 1936 the principal activity of commercial aircraft operators in Canada was the carriage by air of passengers, freight, and mails to mining fields in the more remote parts of the Dominion. Their work also included forest fire patrols, timber cruising, air photography, flying instruction, advertising, short passenger flights, etc., in various parts of the country.

Air-Mail Services.—Regular air-mail services were established in December, 1927. Statistics of the air-mail services, showing routes operated, mileage flown, and mail carried during the fiscal year ended March 31, 1936, may be found in Table 6, p. 727, under the part of this chapter dealing with the Post Office.

Encouragement of Aviation.—To encourage a more wide-spread interest and knowledge of aviation, the Department of National Defence, since 1928, has assisted by issuing light aeroplanes and making grants to each of the 22 flying clubs; viz: Halifax, Cape Breton, Saint John, Montreal, Brant-Norfolk, Fort William, Hamilton, Kingston, London, Ottawa, St. Catharines, Toronto, Border Cities, Kitchener, Brandon, Winnipeg, Moose Jaw, Regina, Saskatoon, Calgary, Edmonton, and Vancouver. Many aerodromes have been established through this movement. Details of membership, aircraft, hangars, flights, etc., of flying clubs are shown separately in the tables.

Section 2.—Airports and Aircraft.

Subsection 1.—Ground Facilities.

The nucleus of the chain of aerodromes and ground facilities which will constitute the Trans-Canada airway mentioned below, consisted of municipal or flying-club airports adjacent to the larger urban centres. There are also numerous terminals from which commercial flying services operate, chiefly into the northerly mining regions. These different types of air harbours are indicated in Table 2.

Trans-Canada Airway Development.—The construction of the Trans-Canada airway progressed favourably during 1936. When completed, the airway will consist of a chain of airports and intermediate aerodromes, approximately 30 miles apart, reaching from Halifax to Vancouver with "feeder lines" or branches leading to the larger cities off the main airway to neighbouring cities in the United States, and into the Canadian North. The airway will be equipped with air navigation aids, such as radio, lighting for night flying and weather reporting services, and is designed to facilitate civil and commercial flying operations in the Dominion.

A large air terminal has been built at St. Hubert, seven miles south of Montreal. A mooring tower for airships and an aerodrome have been constructed there and immigration, customs and postal facilities are available. An aerodrome has also been constructed at Rimouski to expedite the dispatch and reception of trans-atlantic mails.

Subsection 2.—Aircraft.

The Manufacture of Aircraft.—An aircraft industry, to construct in Canada the aircraft and equipment required for aviation is essential to the development of flying. Canadian Vickers was the pioneer firm in Canada. Several manufacturers are now producing original types especially suited to operation in Canada. Several aircraft manufacturers from England and the United States have formed branches in Canada for the assembly and service of their products. The list of aircraft manufacturers for 1936 includes the following: Montreal Air Industries, Ltd., Montreal; The Boeing Aircraft of Canada, Ltd., Vancouver; DeHavilland Aircraft of Canada, Ltd., Toronto; Fleet Aircraft, Ltd., Fort Erie, Ont.; Ottawa Car Manufacturing Company, Ottawa; Fairchild Aircraft, Longueuil, Que.; and Noorduyt Aircraft Ltd., St. Laurent, Que.

The following firms have established plants for the manufacture of landing gear designed to meet the needs of Canadian aviation: Elliott Bros., Sioux Lookout, Ont.; Sachau Marine Construction Co. Ltd., Humber Bay, Toronto, Ont.; McDonald Bros. Ltd., Winnipeg, Man.; Northwest Aero Marine, Ltd., Winnipeg, Man.; Winnipeg Speedcraft Factory, Winnipeg, Man.; and R. Erstad, Saskatoon, Sask.

Aero engine factories are established for construction or assembly and service of their products as follows: Armstrong-Siddeley Motors Ltd., at Ottawa; Aero Engines of Canada Ltd., at Montreal for "Wright" and "Bristol" engines; and Canadian Pratt and Whitney Aircraft Ltd., at Longueuil, Que.

PART VI.—WIRE COMMUNICATIONS.*

The statistics regarding rapid communication by wire are classified under two sections—telegraphs and telephones. The division in actual practice may not be quite so clear cut since some of the telegraph services, especially in outlying districts, undoubtedly use telephone rather than telegraph instruments, but with such insignificant exceptions the two types of service are quite distinct.

Section 1.—Telegraphs.

The early history of telegraphic communication in Canada, given on p. 778 of the 1934-35 Year Book, is not repeated in this volume in order to economize space.

Dominion Government Telegraph Service.—This service is operated by the Telegraph Branch of the Department of Public Works. Its general object has been to furnish wire communication for outlying and sparsely settled districts where the amount of business is so small that commercial companies will not enter the field but where the public interests require that there should be communication. Thus these facilities include: telegraph and telephone services to scattered settlements around the coasts of Cape Breton island; cable services to Campobello, Grand Manan and other islands in the bay of Fundy, to Prince Edward Island, Magdalen islands and Anticosti island in the gulf of St. Lawrence; telegraph or telephone services along the north shore of the gulf of St. Lawrence from Quebec to the straits of Belle Isle; cable connections with Pelee and Manitoulin islands in Ontario; some lines to northern outlying districts in Saskatchewan; lines from Edmonton to the Athabaska and Peace River country in Alberta; telegraph or telephone communications around the coast of Vancouver island and to fishing, lumbering and mining settlements along the coast of the mainland of British Columbia, as well as to isolated mining centres in the interior; and finally the overland telegraph line to Dawson and other settlements in Yukon. Statistics of these services are included in the tables which follow.

* Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch issues annual reports dealing with telegraph and telephone statistics, respectively, to which the reader is referred for more detailed information.

¹ Excluding U.S. lines of Canadian National Telegraphs.

² Excluding commission operators.

³ Excluding messages relayed to the United States. Revised since the publication of the 1936 Year Book.

Telegraph Systems.—The Canadian telegraph systems are composed of lines owned by the Dominion Government and by chartered railway and telegraph companies. The Canadian facilities, in proportion to population, are among the most extensive in the world, and are operated under considerable climatic and geographic disadvantages. In the operation of railways and in the receipt and dispatch of market and press reports, the service to the nation is invaluable.

Table 2 gives figures of telegraph operation and line and wire mileage of various companies for the years 1931 to 1935. Statistics of the Halifax and Bermudas Cable Co., the Canadian Marconi Wireless Telegraph Co., and the Pacific Cable Board are not included.

¹ Cablegrams not included.

² The figures for Table 1 include offices of wireless and cable companies and to that extent are larger than the sums of the items given here for corresponding years.

³ Included with Canadian National offices. The Western Union handles only through business.

⁴ Leased telephone line.

Submarine Cables.—Sixteen transoceanic cables have termini in Canada—fourteen of them on the Atlantic coast and two on the Pacific. In addition there are eight cables between Atlantic coastal stations in Canada and the United States. The year in which the cable was first demonstrated to be of commercial value was 1866, and up to the present its use has greatly increased. The Atlantic cables are controlled by English and United States interests. The Pacific cable, from Canada to Australia and New Zealand, has been in operation since 1902, and was owned by a partnership of the Governments of Great Britain, New Zealand, Australia, and Canada. As a result of the recommendation of the Imperial Wireless and Cable Conference of 1928, in view of increased wireless competition, it was decided to dispose of the Pacific and West Indian Islands cable systems to the Imperial and International Communication Co., a company formed to take over all Empire-owned cables and lease the Empire-owned beam wireless systems. The necessary legislation was passed by the United Kingdom in February, 1929, and by Canada in June, 1929.

Section 2.—Telephones.

A brief historical account of the early development of telephones in Canada appeared at p. 781 of the 1934-35 Year Book.

Subsection 1.—Systems and Equipment.

Telephone Systems.—The 2,833 telephone systems existing in 1935 included the three large provincial systems in Manitoba, Saskatchewan, and Alberta, and a smaller governmental system in Ontario, together with the system operated by the National Parks of Canada, Department of Mines and Resources. There were also 143 municipal systems, the largest operated by the cities of Edmonton, Fort William, and Port Arthur. Out of the 1,958 co-operative telephone companies, no fewer than 1,155 were in Saskatchewan alone, 496 in Alberta, and 205 in Nova Scotia. There was a large increase in the number of co-operatives in Alberta due to the provincial system selling its rural services to such local organizations. The largest among the 531 joint-stock companies operating telephone systems in 1935 were the Bell Telephone Co., and the British Columbia Telephone Co. Almost 58 p.c. of the total telephone investment in Canada belonged to the Bell Telephone Co., and their telephones in Quebec and Ontario constituted 57 p.c. of the total for Canada.

Telephone Equipment.—The number of telephones per capita is second only to that of the United States, the numbers being 13·36 telephones per 100 population in the United States and 11·05 in Canada. This is a favourable showing in view of the low density of population in Canada as a whole and the fact that 46 p.c. (46·30 p.c. in 1931) of the population is rural.

There were 521,265 telephones out of a total of 801,298 in 51 leading cities of Canada operated from automatic switchboards and the remainder or 280,033 operated from manual switchboards. Automatic switchboards have completely displaced manual switchboards in the principal cities of the Prairie Provinces.

1935.....	2,833	207,916	5,120,610	351,427	615,052	218,818	23,518	1,208,815	11.1	

¹ Figures for 1911-18 are for years ended June 30; those since 1918 are for calendar years. ² Includes telephones on rural exchange lines and urban exchange lines which have more than four parties and which run out into adjacent rural areas.

³ Revised since the publication of the 1936 Year Book.

The density of telephones in the different provinces is naturally influenced by the urbanization of the population because the number of telephones used for business purposes is much greater in cities and towns than in rural areas.

Subsection 2.—Telephone Finances.

The financial statistics of Table 5 show that the investment in telephone property in Canada, represented by the cost of property, is a very large item and is exceeded in the field of transportation and communications only by the investments in steam railways (pp. 639-640) and roads and highways (pp. 670-671).

² Excluding employees and salaries and wages paid on rural lines.

Subsection 3.—Telephone Calls.

Systems operating almost 90 p.c. of all telephones in Canada made estimates by actual count on days of normal business, and, after adjusting for uncompleted calls, holidays, Sundays, etc., the average was multiplied by 365. The long-distance calls in practically all cases were the actual long-distance calls put through or completed. The averages were 1,878 local and 21.5 long-distance calls per telephone and 210 telephone conversations per capita as compared with 213 in 1934. The estimated per capita average for the United States in 1934 was 192.

PART VII.—WIRELESS COMMUNICATIONS.*

Upon the organization of the Department of Transport on Nov. 2, 1936, under authority of c. 34, 1936, the administration of radio within the Dominion was vested under the Chief of Air Services, Department of Transport. Previous to this, Dominion jurisdiction had been questioned by certain of the provinces from time to time, but on Feb. 9, 1932, the Judicial Committee of the Imperial Privy Council ruled that the control and regulation of radio communication is within the jurisdiction of the Dominion Parliament. This decision was a very important one and has done much to further the nationalization of radio broadcasting in Canada. (See p. 720.)

Section 1.—Radiotelegraphy.

The Coast Station Radiotelegraph System.—The present coast station system of 78 stations consists of three chains—one extending from Vancouver to Prince Rupert on the Pacific, another from Port Arthur to the Atlantic ocean in the east, and the third from Port Churchill to Resolution island at the entrance to Hudson strait. The Great Lakes coast stations connect with those of the east coast, which, in turn, connect with the Hudson Bay route chain. There is no direct radio connection between the Great Lakes and the Pacific Coast chain.

Of the above stations, 14 on the east coast and Great Lakes are operated by the Canadian Marconi Co. under contract with the Department, and the remaining 64 on the east coast, west coast, and Hudson bay and strait are operated directly by the Department. Twice daily, at advertised hours, a number of these stations broadcast messages to shipping containing such important information as weather forecasts, storm warnings, reports in connection with floating derelicts, ice, and other dangers to navigation. In the interests of navigators, to whom accurate time

* Section 1 and Subsection 1 of Section 2 have been revised by Commander C. P. Edwards, O.B.E., Chief of Air Services, Department of Transport, Ottawa. A fuller treatment of the historical and descriptive background of radio communication was published at pp. 607-610 of the 1932 Year Book.

is essential in computing observations on celestial bodies, three Canadian coast stations—two on the west coast and one on the east coast—transmit time signals at advertised hours daily.

Some years ago the discrimination of underwriters in the matter of insurance rates charged on ships plying to Canadian ports led the Department to feel that any reasonable expenditure which would tend to reduce these charges would be a sound investment. To this end 13 direction-finding stations have been established at specially selected sites with respect to navigational routes—7 on the east coast, 5 on Hudson bay and strait, and 1 on the west coast. These stations are fitted with special apparatus which enables the direction of the incoming radio signal transmitted by a ship to be accurately determined.

A network of 25 radio beacon stations is maintained on the Atlantic and Pacific coasts and on the Great Lakes to enable a ship or aircraft station equipped with its own direction-finding apparatus to determine its bearing or direction in relation to the radio beacon station. The operation of these radio beacons is automatic, the transmissions being made in clear weather hourly or half-hourly as advertised, and continuously during foggy weather. At Point Atkinson, B.C., the signals of the radio beacon are synchronized with the emissions of the fog alarm at that place during foggy weather for distance finding. To insure the safety of life at sea, all passenger steamers and freighters plying to and from Canadian ports must carry radio equipment manned by competent operators in possession of a certificate of proficiency in radio. The Department maintains a complete radio inspection service to enforce this regulation. Inspectors located at various ports throughout the Dominion are responsible for checking the efficiency of the radio equipment on ships of all nationalities, and seeing that only competent operators are carried. Ships are also surveyed with a view to the issuance of the necessary certificates prescribed under the Safety of Life at Sea and Load Line Conventions Act, 1931. Examinations for certificates of proficiency in radio are conducted by the Radio Branch, and 6,340 certificates had been issued up to Mar. 31, 1936.

Section 2.—Radiotelephony.

Broadcasting of the human voice by radio first commenced in Canada with test programs carried out by the Canadian Marconi Co. in Montreal during the winter evenings of 1919. Regular organized programs were commenced in December, 1920, by the same company, on a wavelength of 1,200 metres. In April, 1922, the establishment of broadcasting stations on a general scale commenced, 52 private, commercial and amateur broadcasting licences being granted during the fiscal year 1923. A radiotelephone service between Canada and Great Britain was first made available to the Canadian public, through the medium of the Bell Telephone Co. *via* the transatlantic radio circuit operated by the American Telegraph and Telephone Co. from New York, in March, 1928. In 1932 a direct circuit with Great Britain was opened through the medium of the beam station of the Canadian Marconi Co. at Drummondville, Quebec.

Subsection 1.—Regulation of Radiotelephony.

As explained in the introduction to Wireless Communications, the administration of radio, including broadcasting, within Canada is vested in the Dominion Department of Transport. Both broadcasting and receiving stations must hold licences from this authority. The licence fee for a broadcasting station is \$25 for a period of 6 months, and for a receiving set \$2 per annum.

Approximately \$250,000 is expended annually by the Radio Division of the Department of Transport for the suppression of inductive interference in the interests of broadcast listeners. This service is entirely free. Upwards of 100 men and 32 fully-equipped cars are engaged in this work.

The extent to which private receiving sets are used for the reception of public broadcasting is indicated by the number of private receiving licences issued in the various provinces of the Dominion during the fiscal year 1936 as follows: Prince Edward Island, 2,159; Nova Scotia, 31,905; New Brunswick, 22,347; Quebec, 221,702; Ontario, 342,056; Manitoba, 56,986; Saskatchewan, 49,059; Alberta, 55,318; British Columbia, 80,205; Yukon and Northwest Territories, 372.

Subsection 2.—Canadian Broadcasting Corporation.*

National radio broadcasting in Canada, which was inaugurated under Act of Parliament towards the end of 1932, entered a second phase on Nov. 2, 1936. On that date the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission. This change followed repeal by Parliament at the session of 1936 of the Canadian Radio Broadcasting Act of 1932 under which the former Commission held office. The new Act which replaced it provided that the national broadcasting system should be operated by a corporation to be known as the Canadian Broadcasting Corporation, consisting of a Board of Governors and a General Manager and Assistant General Manager. The new Act gave the Corporation much wider powers in the operation of the system than those which had been enjoyed by the former Commission. It was modelled very largely along the lines of the Act governing the British Broadcasting Corporation in Great Britain. It was provided that the Corporation should have the full use of the revenue from receiver licences and that it could borrow from the Government sums not exceeding \$500,000, interest and amortization charges on such loans to be a first charge on the Corporation's revenues.

In line with recommendations of a Parliamentary Committee which had investigated the broadcasting situation during the session of 1936, the Act included definite stipulations covering political broadcasts. It prohibited such broadcasts in dramatized form, required full sponsorship of all political broadcasts, prohibited political broadcasts on election day or during the two days immediately preceding election day, reposed in the Corporation responsibility for the limitation and distribution of time for political broadcasts.

Under the new Act control of certain technical matters reverted to the Minister of Transport, to be exercised through the Radio Division of the Department. Among these matters were the licensing of broadcasting stations, assignment of wavelengths and power of stations. It was provided, however, that there should be co-operation between the Minister and Corporation in these matters so that the location and organization of private stations should be such as to permit of the efficient absorption of them into the national system.

Subsequent to the passing of the Act, the Government appointed the Board of Governors and, upon the recommendation of the latter, a General Manager and an Assistant General Manager. All these appointments became effective on Nov. 2, 1936, when the new Act came into force, and the Corporation immediately took over control of the system.

Shortly after taking office the Corporation undertook two important surveys, one a technical survey having to do with the problem of broadcast coverage, and the other a program survey aimed at improvement in the character and quality of Canadian broadcasting.

In February, 1937, the Corporation completed and put into operation a new broadcasting station at Vancouver. This station was provided with power of 5,000 watts and was designed to improve coverage in British Columbia. It was announced that the Corporation planned to establish a powerful short-wave station capable of transmitting Canadian programs to other countries. The aim is to make radio broadcasting in Canada a cementing and reconciling force in the national life. The Corporation endeavours to bring to Canadian listeners the best programs available from other countries and to have its own broadcasting reflect the distinctive character of Canadian life.

*Revised by E. C. Buchanan, Public Relations Division, Canadian Broadcasting Corporation.

PART VIII.—THE POST OFFICE.*

Historical.—A brief account of the pre-Confederation development of postal services in Canada was given on pp. 789-790 of the 1934-35 Year Book.

At Confederation the provincial systems were transferred to the Dominion. The Post Office Act of 1867 established a service throughout Canada. The domestic rate on letters was reduced from 5 to 3 cents per half-ounce, and in 1870 the rates to the United States and the United Kingdom were reduced from 10 to 6 cents and from 12½ to 6 cents, respectively, per half-ounce. In 1875 a convention between Canada and the United States reduced postal rates between the countries to the domestic level. In 1878, on the admission of Canada to the Postal Union, letter postage to the countries of the Postal Union was reduced to 5 cents per half-ounce. After a conference in 1897 Imperial penny postage (2 cents per half-ounce) was established on Dec. 25, 1898, while the domestic rate was reduced from 3 to 2 cents per ounce. These rates were maintained until 1915, when, with the rising costs of the war period, rates were increased. Penny postage again became effective for Canada, to the United States, Newfoundland and other countries of North America on July 1, 1926, and to the United Kingdom and all other places within the British Empire on Dec. 25, 1928, with later extensions to France and South America. On July 1, 1931, a special revenue tax, imposed by the Government for the purpose of obtaining additional revenue, came into effect on letters addressed to places in Canada, throughout the Empire, to France, to Spain and to North and South America generally, making the rate in these cases 3 cents for the first ounce and 2 cents for each additional ounce.

The Post Office Department is administered by the Postmaster General. Besides the several administrative branches at Ottawa, the Dominion is divided into 15 districts, each in charge of a District Director or Superintendent of Postal Service. The Canadian system embraces a territory more extensive than that served by any other system, excepting those of United States and Russia, and the relatively small population compared with the great distance to be covered makes inevitable a peculiarly difficult and relatively expensive service.

Rural Mail Delivery.—A system of rural mail delivery was inaugurated in Canada on Oct. 10, 1908, limited at that time to existing stage routes. The service was greatly extended by new regulations taking effect on April 1, 1912. The result has been an increase in the number of rural routes from approximately 900 in 1912 to 4,379 in 1935, having 242,150 mail boxes as against approximately 25,000 in 1912.

Mail Transportation.—The conveyance of mail by land, water, and air entailed a total expenditure of \$13,208,332 during the fiscal year ended 1936. Railway carriage cost \$6,721,222, land transportation (largely that by rural delivery) cost \$5,944,756, conveyance by steamship cost \$266,383, while that by air cost \$275,971. These amounts were paid solely for services rendered as carriers. For details regarding air-mail services, see pp. 726-727. Special subsidies are granted to assure the maintenance of certain steamship services. Since these subsidized services provide transportation for passengers and freight as well as mail, the subsidies are included with other expenditures on water transportation on p. 688.

*Revised by H. Beaulieu, Director, Administrative Services, Post Office Department.

Statistics.—Tables 1 to 3 show, respectively, the numbers of post offices in operation in Canada in the latest six years, the gross revenue in each office collecting \$10,000 and upwards in 1935 and 1936, and the net revenues and expenditures of the Department in various years since 1890.

¹ "Net Revenue" is exclusive of commissions and allowances to postmasters and some other smaller items. The gross revenue in the fiscal year 1935 was \$37,577,241 and in 1936, \$39,203,500.

Auxiliary Services.—The auxiliary postal services—the issuing of money orders (including postal notes) and the facilities offered by the Post Office savings banks—have expanded enormously since Confederation. In 1863, there were 515 money order offices in operation, issuing orders to an amount of \$3,342,574, while the following tables show the magnitude of operations now. Statistical tables showing deposits with the Government savings banks since Confederation and the business of the Post Office savings banks, 1931-36 are included in the chapter on Currency and Banking, (Chapter XXII).

4.—Operations of the Money Order System in Canada, fiscal years ended Mar. 31, 1911-36.

NOTE.—For 1868 to 1910, see Canada Year Book, 1911, p. 289; for 1901-10, see 1932 Year Book, p. 622.

Total value, including postal note stamps affixed.....\$	12,629,304	10,530,490	9,247,459	10,246,800	11,374,903

Postage Stamps.—The value of the postage stamps, post cards, etc., sold during each of the latest seven fiscal years, was: \$27,101,353 in 1930, \$25,769,781 in 1931, \$27,242,715 in 1932, \$25,999,159 in 1933, \$25,541,129 in 1934, \$26,303,451 in 1935, and \$27,341,608 in 1936. Receipts from postage paid in cash were as follows: \$9,045,805 in 1930, \$8,887,322 in 1931, \$9,078,136 in 1932, \$8,173,950 in 1933, \$8,129,387 in 1934, \$8,619,712 in 1935, and \$9,277,072 in 1936.

Air-Mail Services.—The total weight of mail carried by air throughout Canada during the year ended Mar. 31, 1936, was 1,189,982 lb., an increase of 72 p.c. over the previous year, while the mileage flown showed an increase of approximately 50 p.c.

An interesting feature of the returns is the continued volume of mail carried by air into the several mining districts, and there would seem to be little doubt that aerial postal communication contributes materially to the development of Canada's natural resources.

PART IX.—THE PRESS.

While the Dominion Bureau of Statistics does not collect statistics regarding newspapers and periodicals in Canada, a short treatment taken from McKim's *Directory of Canadian Publications* is introduced here, since the press is a very important factor in carrying information to the people and in crystallizing and express-

ing public opinion on current questions. Industrial statistics of the printing and publishing, and of the printing and bookbinding industries will be found on p. 428, in Chapter XIV, dealing with manufactures.

The publications enumerated in Table 1 include a number for which no estimate of circulation is given. Such publications are therefore omitted from the compilation of circulations in Tables 2 and 3. This accounts for the difference in the number of daily, semi-weekly, and weekly publications shown in Tables 1 and 2. Comparison of the figures of Table 3 showing publications in cities of 20,000 population or over, with those for the same year of Table 2, showing publications for the whole of Canada, indicates that the daily newspapers are confined almost entirely to these larger urban communities, but that, in the field of weekly publications, while the greater part of the circulation is accounted for by the publications of these cities, by far the greatest number of weeklies are issued in smaller communities. The weekly seems to be the standard medium for local news in small towns and villages.

Since circulations in many cases are only roughly estimated, totals in the tables are given in round numbers.

1.—Number of Publications in Canada, by Frequency of Issue, 1926-35.

NOTE.—Compiled from *McKim's Directory of Canadian Publications*. Figures do not include Newfoundland.

CHAPTER XIX.—LABOUR AND WAGES.*

PART I.—LABOUR.

Section 1.—Occupations of the Wage-Earning Population.

At the census, the total population in gainful occupations is recorded. In Section 15 of Chapter IV, pp. 128-146, the total gainfully occupied in 1931 are dealt with rather extensively under the heading "Occupations of the Canadian People". This Section is limited to the treatment of occupations of wage-earners. The gainfully occupied population is composed of four classes of persons: (1) employers, (2) own accounts, (3) wage-earners, (4) unpaid family workers. The third class, *i.e.*, the wage-earners, comprises that portion of the gainfully occupied which in the course of its employment receives either wage or salary payment. In Canada the wage-earners numbered 2,570,097 at the 1931 Census, representing 65.44 p.c. of the total population in gainful occupations. The number of male wage-earners was 2,022,260 or 78.68 p.c. of the total of both sexes combined, and the number of female wage-earners was 547,837 or 21.32 p.c. of the total. Classifications of occupations by status are given at pp. 143-144.

Table 1 shows the numerical and percentage distribution of the wage-earners by provinces in 1931.

1.—Numerical and Percentage Distribution of Wage-Earners, by Provinces, 1931.

Province.	Numbers.			Percentages.		
	Total.	Male.	Female.	Total.	Male.	Female.
Prince Edward Island.....	12,344	9,159	3,185	0.48	0.45	0.58
Nova Scotia.....	117,781	95,244	22,537	4.58	4.71	4.11
New Brunswick.....	84,232	66,310	17,922	3.28	3.28	3.27
Quebec.....	696,339	535,203	161,136	27.09	26.47	29.41
Ontario.....	965,607	752,851	212,756	37.57	37.23	38.84
Manitoba.....	170,739	132,883	37,856	6.64	6.57	6.91
Saskatchewan.....	145,568	116,157	29,411	5.66	5.74	5.37
Alberta.....	142,421	116,005	26,416	5.54	5.74	4.82
British Columbia.....	235,066	198,448	36,618	9.15	9.81	6.68
Canada.....	2,570,097	2,022,260	547,837	100.00	100.00	100.00

It will be seen that almost two-thirds of the wage-earners were found in Ontario and Quebec at the last census, a little less than one-fifth in the Prairie Provinces, and somewhat less than one-tenth in British Columbia and the Maritimes.

In Table 2 the numbers and percentages of the wage-earners in the main industrial groups are given for Canada, while in Table 3 the distribution is according to broad occupational groupings. The differences between these industrial and occupational classifications, which are explained in the headnote to Table 28 on p. 132, and also in the material on "occupations by industry" appearing on pp. 145-146, should be carefully noted.

* The sections and subsections of this chapter, with the exceptions of Sections 1, 3, 7 and 9, Subsections 3 and 5, and Section 10, all of Part I, and Section 4 of Part II, have been revised by, or under the direction of, W. M. Dickson, Deputy Minister, Department of Labour, Ottawa. The information in Section 3, Part I, has been obtained through the courtesy of the Provincial Departments of Labour or Bureaus of Labour, and that in Section 7, Part I, has been revised by the chairmen of the respective provincial Workmen's Compensation Boards. Section 10 has been revised under the direction of Dr. W. C. Clark, Deputy Minister, Department of Finance, Ottawa. The remaining Sections have been prepared in the Dominion Bureau of Statistics.

2.—Numerical and Percentage Distribution of Wage-Earners, by Industrial Groups for Canada, 1931.

Industrial Group.	Numbers.			Percentages.		
	Total.	Male.	Female.	Total.	Male.	Female.
Agriculture.....	198,592	196,675	1,917	7.73	9.73	0.35
Forestry, fishing, trapping.....	57,844	57,550	294	2.25	2.85	0.05
Mining, quarrying.....	68,962	68,610	352	2.68	3.39	0.06
Manufacturing.....	606,617	496,865	109,752	23.60	24.57	20.03
Electric light and power.....	18,938	17,471	1,467	0.74	0.86	0.27
Construction.....	217,105	215,505	1,600	8.45	10.66	0.29
Transportation and communications	283,675	260,429	23,246	11.04	12.88	4.24
Trade.....	281,107	204,763	76,344	10.94	10.13	13.94
Finance, insurance.....	82,963	58,102	24,861	3.23	2.87	4.54
Service.....	585,413	281,118	304,295	22.78	13.90	55.54
Unspecified.....	168,881	165,172	3,709	6.57	8.17	0.68
All Industries.....	2,570,097	2,022,260	547,837	100.00	100.00	100.00

Table 2 shows that almost one-quarter of the wage-earners are employed in the manufacturing industries, over one-fifth in the services, and just over 10 p.c. both in transportation and communications, and in trade. It will be noted that 55 p.c. of the females find employment in service, chiefly in personal and professional services.

3.—Numerical and Percentage Distribution of Wage-Earners, by Occupational Groups, for Canada, 1931.

Occupational Group.	Numbers.			Percentages.		
	Total.	Male.	Female.	Total.	Male.	Female.
Agriculture.....	202,137	200,468	1,669	7.86	9.91	0.30

Trade.....	208,017	162,299	45,718	8.09	8.03	8.35
Finance, insurance.....	27,457	27,010	447	1.07	1.34	0.08
Service ³	489,024	217,947	271,077	19.03	10.78	49.48
Professional.....	166,368	85,608	80,860	6.47	4.23	14.76
Personal ⁴	322,656	95,888	189,524	11.11	4.74	34.59
Clerical.....	239,882	123,749	116,133	9.33	6.12	21.20
Labourers and unskilled workers (not agricultural, mining or logging)....	433,916	422,284	11,632	16.88	20.88	2.12
Unspecified.....	1,585	1,291	294	0.06	0.06	0.05
All Occupations.....	2,570,097	2,022,260	547,837	100.00	100.00	100.00

¹ Less than one-hundredth of one per cent. ² Includes "Electric Light and Power".
 "Warehousing and Storage" ⁴ Includes "Laundering, Cleaning, Dyeing and Pressing".

³ Includes
⁵ Includes

Public Administration and Recreational Service in addition to Professional and Personal.

In Table 3, where the wage-earners are classified into broad occupational groups, separate groups have been shown for clerical workers and labourers in other than primary pursuits—two groups with wide industrial range. Over one-fifth of all female wage-earners reported clerical occupations at the 1931 Census, while a similar proportion of males were returned as labourers in secondary industries and services.

4.—Numerical and Percentage Distribution of the Wage-Earners, by Age Groups, for Canada, 1931.

Age.	Numbers.			Percentages.		
	Total.	Male.	Female.	Total.	Male.	Female.
10-13 years.....	1,108	678	430	0.04	0.03	0.08
14-15 "	19,101	11,900	7,201	0.74	0.59	1.31
16-17 "	103,827	62,697	41,130	4.04	3.10	7.51
18-19 "	184,610	107,926	76,684	7.18	5.34	14.00
20-24 "	482,825	308,351	174,474	18.79	15.25	31.85
25-34 "	671,748	539,145	132,603	26.14	26.66	24.20
35-44 "	497,245	437,893	59,352	19.35	21.65	10.83
45-54 "	361,331	327,464	33,867	14.06	16.19	6.18
55-64 "	179,641	163,571	16,070	6.99	8.09	2.93
65-69 "	43,277	39,461	3,816	1.68	1.95	0.70
70 years or over.....	25,384	23,174	2,210	0.99	1.15	0.40
All Ages.....	2,570,097	2,022,260	547,837	100.00	100.00	100.00

From Table 4, which gives wage-earners by age groups, it is clear from the percentage columns that entrance to gainful employment began at an earlier age for females than for males in the ages up to 24 years, but from 25 years onwards males take the lead. For information on earnings of wage-earners the reader is referred to Section 4 of Part II of this chapter pp. 788-789.

Section 2.—The Dominion Department of Labour.

The Department of Labour of the Dominion Government was established in 1900 under the authority of the Conciliation Act, 1900 (63-64 Vict., c. 24). Its chief duties originally comprised the administration of certain provisions of this statute designed to aid in the prevention and settlement of labour disputes, the administration of the Government's fair wages policy for the protection of workmen employed on Dominion Government contracts and on works aided by grants of public funds, the collection and classification of statistical and other information relative to conditions of labour, and the publication of a monthly periodical known as the *Labour Gazette*. From 1900 to 1909 the Department was administered by the Postmaster General, who was also Minister of Labour. It was constituted a separate Department under the Labour Department Act, 1909 (R.S.C., 1927, c. 111).

The work of the Department was greatly increased in 1907 by the passage of the Industrial Disputes Investigation Act (R.S.C., 1927, c. 112). At present the Department is also charged with the administration of an Act passed in 1918 known as the Employment Offices Co-ordination Act (R.S.C., 1927, c. 57), the Government Annuities Act of 1908 (R.S.C., 1927, c. 7), the Technical Education Act enacted in 1919 (R.S.C., 1927, c. 193), the White Phosphorous Matches Act of 1914 (R.S.C., 1927, c. 128), the Fair Wages and Hours of Labour Act, 1935

(20-21 Geo. V, c. 20), the Vocational Education Act, 1931 (21-22 Geo. V, c. 59), the Minimum Wages Act of 1935 (25-26 Geo. V, c. 44), the Unemployment and Farm Relief Act, 1931 (21-22 Geo. V, c. 58), the Unemployment and Farm Relief Continuance Act, 1932 (22-23 Geo. V, c. 13), the Relief Act, 1932 (22-23 Geo. V, c. 36), the Relief Act, 1933 (23-24 Geo. V, c. 18), the Relief Act, 1934 (24-25 Geo. V, c. 15), the Relief Act, 1935 (25-26 Geo. V, c. 13), the Unemployment Relief and Assistance Act, 1936 (1 Edward VIII, c. 15), and the National Employment Commission Act, 1936 (1 Edward VIII, c. 7). The scope of the Department has increased in other directions, especially in investigating the cost of living, and in connection with the International Labour Organization of the League of Nations. For the operation of the Government Annuities Act of 1908 and the Technical Education Act, see the chapters on Insurance and Education, respectively.

Industrial Disputes Investigation Act.—The Industrial Disputes Investigation Act (R.S.C., 1927, c. 112), has attracted considerable favourable attention from legislators and publicists throughout the world. As enacted in 1907, it forbids strikes and lockouts in mines and certain public utility industries until the matters in dispute have been dealt with by a board of conciliation and investigation consisting of three members, two appointed by the Minister of Labour on the recommendation of the respective parties to the dispute, the third on the recommendation of the first two, or, if they fail to agree, by the Minister himself. Should either of the parties fail to nominate a board member, the Minister may appoint a fit person on its behalf. After the Board has made its report, either of the parties to the dispute may reject it and declare a strike or a lockout, a course adopted, however, only in a small percentage of cases. The machinery of the Act may be extended to other industries with the consent of the parties concerned. In January, 1925, a judgment was rendered by the Judicial Committee of the Privy Council declaring that the Act as it stood was not within the competence of the Dominion Parliament.* At the ensuing session of Parliament amendments were made to the statute, with the object of limiting its operation to matters not within exclusive provincial jurisdiction. It was also provided by these amendments that the statute should apply in the case of "any dispute which is within the exclusive legislative jurisdiction of any Province and which by the legislation of the Province is made subject to the provisions of this Act".

The Legislatures of all provinces except Prince Edward Island have taken advantage of this provision and enacted enabling legislation, by which the Dominion Industrial Disputes Investigation Act becomes operative in respect of disputes of the classes named in the Dominion law and otherwise within exclusive provincial jurisdiction.

A review of the proceedings under the Industrial Disputes Investigation Act from its enactment in March, 1907, to Mar. 31, 1936, shows that, during the 29 years, 845 applications were received for the establishment of boards of conciliation and investigation, as a result of which 545 boards were established. In all but 39 cases, strikes or lockouts were averted or ended.

Fair Wages Branch.—The Fair Wages Branch of the Department of Labour is charged with the preparation and enforcement of the labour conditions and schedules of minimum wage rates which are inserted in Dominion Government contracts for works of construction, remodelling, repair or demolition. The number of fair wages schedules prepared from the time the Fair Wages Policy was adopted

* See p. 241 of the *Labour Gazette* for February, 1925, for text of judgment of the Judicial Committee of the Privy Council in regard to the validity of this statute.

by the Dominion Government in 1900 up to the end of the fiscal year 1935-36 was 7,005. The number of fair wages schedules furnished during the fiscal year 1935-36 was 500.

The Department of Labour also co-operates closely with other Departments of the Government in ensuring the observance of fair wages conditions inserted in contracts for the manufacture of various classes of equipment and supplies for Government use, and is frequently consulted by other Departments regarding the prevailing rates of wages to be observed on works carried out by day labour.

The Fair Wages Policy of the Government of Canada was originally based on a resolution adopted by the House of Commons in 1900. It was later expressed in an Order in Council adopted on June 7, 1922, amended on April 9, 1924, and again on Dec. 31, 1934. Under these Orders in Council certain specified conditions were designated as being applicable to contracts for building and construction operations, and other conditions as being applicable in the case of contracts for the manufacture of certain classes of government equipment and supplies. The policy required that the current wage rates and working hours of the district should be observed in the case of all workmen employed, or, if there were no current rates or hours in existence, then fair and reasonable conditions should be observed in both respects. Contracts for railway construction to which the Dominion Government has granted financial aid, either by way of subsidy or guarantee, are likewise subject to fair wages conditions. The policy has, moreover, been extended within recent years to cover contracts for works carried out by the several Harbour Commissions and by the National Harbours Board which replaced them during the year.

On May 30, 1930, an Act of Parliament was adopted known as the Fair Wages and Eight Hour Day Act, 1930, providing for the payment of current wage rates to all persons employed on contracts made with the Government of Canada for works of construction, remodelling, repair or demolition, provided that the wages in all cases should be fair and reasonable. This statute also directed that the working hours of persons while so employed should not exceed eight hours a day. It was further declared that the foregoing conditions were to be applied to all workmen employed by the Government itself on the construction, remodelling, repair or demolition of any work.

The Fair Wages and Eight Hour Day Act, 1930, was superseded, however, on May 1, 1936, by the Fair Wages and Hours of Labour Act, 1935, which was adopted by Parliament on June 28, 1935. This latter statute re-enacts a number of the sections of the former Act and adds new provisions to comply with the recommendations of the Royal Commission on Price Spreads. Like its predecessor, the Act makes provision for fair wages and an eight-hour day on Government contracts for works of construction, remodelling, repair or demolition, imposing however, a limit of forty-four hours a week on such works and extending the Dominion Government's policy of fair wages and an eight-hour day to works carried out by any provincial or municipal authority with the aid of Dominion Government funds, as well as to other works aided by the Government of Canada.

The Act sets out that the term "fair wages" means such wages as are generally accepted as current for competent workmen in the district in which the work is being performed for the character or class of work in which such workmen are respectively engaged; but shall in all cases be such wages as are fair and reasonable.

The benefits of the Fair Wages Policy apply also to workmen employed by Government Departments on a day labour basis in building and construction works.

On Mar. 27, 1930, an Order in Council was passed providing that, except in cases where the work of employees was intermittent in character, or the application of the rule was not deemed to be practicable, or in the public interest, the hours of work of any Dominion Government employees who had up to that time been required to work more than eight hours daily should be reduced to eight hours a day, with a half-holiday on Saturday.

An Order in Council was adopted on Dec. 31, 1934, rescinding the labour conditions previously applied to contracts for the manufacture of various classes of government supplies, and substituting other conditions therefor. The provision for the payment of wages not less than current rates, or fair and reasonable rates if there are no current rates, is retained in the new conditions, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, 20 cents an hour. It is also declared that males and females under 18 years of age shall be entitled to rates of wages not less than those provided for women and girls in the minimum wage scales of the respective provinces, and that, in any cases where the provincial minimum wage laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Dominion contract work.

Labour Gazette.—A monthly publication, known as the *Labour Gazette* has been issued by the Dominion Department of Labour since its establishment in 1900. It contains a monthly review of the industrial situation in Canada and of the state of employment, including reports of the operations of the Employment Service of Canada in the various provinces, also information relative to: labour legislation, wage rates and hours of labour, wholesale and retail prices of staple commodities in Canada and other countries, labour disputes (including the proceedings under the Industrial Disputes Investigation Act), industrial accidents, legal decisions affecting labour, industrial training and technical education, proceedings under the Combines Investigation Act, and other matters of general or current industrial interest. The *Labour Gazette* is widely distributed throughout Canada, and the statistical and other information contained therein is constantly used in connection with wages and other issues between employers and workers. A subscription charge of 20c. per annum is made for this publication.

Labour Legislation.—The Department gives considerable attention to labour legislation in Canada and abroad. Notes or articles are published in the *Labour Gazette* and special bulletins in printed or mimeographed form are issued from time to time. While these deal with some particular branch of labour legislation as in operation in the Dominion or in some provinces, information is usually given concerning legislation on the same subject in other countries.

Since 1917, the Department has published a series of reports on labour legislation in Canada. Three reports were issued containing the text of all the labour legislation in force at the end of the years 1915, 1920 and 1928, respectively. Reports summarizing the most important enactments and giving the text of all labour laws passed during the year were published in each of the intervening and subsequent years.

Section 3.—Provincial Labour Departments and Bureaus.

The rapid industrial development at the end of the nineteenth century in Quebec and Ontario, the leading manufacturing provinces, brought with it the recognition of the need of special provincial offices to safeguard the interests of

labour, with the result that the Ontario Bureau of Labour was established in 1900 and the Quebec Department of Public Works and Labour in 1905. In 1904, an Act was passed in New Brunswick providing for a Bureau of Labour, but this never became operative. Some years later, to cope with conditions created by the growth of industry in the West, Acts were passed providing for the creation of Provincial Bureaus of Labour in Manitoba (1915), in Saskatchewan (1920), and in Alberta (1922), while a Department of Labour was established in British Columbia in 1917. A Department of Labour was established in Nova Scotia by c. 3 of the Statutes of 1932, and the Manitoba Bureau of Labour became a Department in 1934. All these authorities publish annual reports on their activities.

The Nova Scotia Department of Labour.—The Act establishing the Nova Scotia Department of Labour provides that “the Department of Labour shall take cognizance of all matters relating to labour and shall administer such affairs, matters, Acts and regulations as the Governor in Council from time to time assigns to that Department, whether or not the same have been assigned or have belonged by or under any Act of the Legislature of Nova Scotia or otherwise to some other Department or to some member of the Executive Council”.

The Department is in charge of a Minister of Labour, who has under him a Deputy Minister of Labour. The latter is empowered to collect and publish information and statistics affecting labour, and to administer such Acts as may be assigned to the Department by Order in Council. At present, labour bureaus in the province, the administration of the Factories Act, Minimum Wage Board, Limitation of Hours Board, Industrial Standards Act, and unemployment relief have been assigned by Order in Council to the Department of Labour.

The Quebec Department of Labour.—This Department was formerly known as the Department of Public Works and Labour, each division having a separate Deputy Minister, but in 1931 the Legislature raised each division to a distinct Department.

The duties of the Department of Labour include the institution and control of inquiries into important industrial questions and those relating to manufactures and it may collect useful facts and statistics relating thereto, to be transmitted to the Quebec Bureau of Statistics. The Department is charged with the administration of provincial Acts respecting industrial and commercial establishments, trade disputes, and the maintenance of fair wages clauses in Provincial Government contracts. The Women's Minimum Wage Commission is under its jurisdiction, together with the Provincial Employment Service.

The Department is responsible for the licensing and qualification of electricians, moving-picture machine operators, stationary enginemen and firemen, and pipe mechanics; it is also charged with the inspection of electrical installations, heating installations, steam, hot-water and hot-air furnaces, boilers registered under the Interprovincial Code, together with the registering of blue prints in connection with the construction of boilers. A special branch of the Department is entrusted with the inspection of public buildings and the approval of the plans of new buildings.

The Department, since the 1934 session, is charged with the enforcement of the Collective Labour Agreements Extension Act; however, it has not the duty of leading employers and employees into the preparation of agreements. When a collective labour agreement has been passed and adopted by the Lieutenant-Governor in Council, a joint committee is formed to supervise the enforcement of the Order in Council; the joint committee, under the authority of the Act,

may adopt regulations for its own administration, render obligatory the certificate of competency in a given trade in cities of more than 10,000 souls, and collect an assessment, not exceeding one-half of one per cent, on the payrolls of employers and on the wages of employees for the purposes of the putting into force of the Order in Council. During the fiscal year 1935-36, 50 collective labour agreements were enforced in the province in various industries.

During the 1936 session, the Quebec Legislature adopted an Old Age Pension Act according to the Federal Old Age Pension Legislation; a Commission was formed to supervise the carrying out of this Act and such Commission has been placed, since September, 1936, under the jurisdiction of the Department of Labour.

The Department has jurisdiction over the limitation of hours of work; since the coming into force of the Act giving it such authority, hours of labour in the building trades have been limited to forty per week throughout the province.

During September, 1936, the Department of Labour was also charged with the control of unemployment relief in the province; such service was formerly under the jurisdiction of the Department of Public Works.

The Department also issues qualification certificates to workmen charged with the use and handling of explosives, and is responsible for the enforcement of the Scaffolding Inspection Act in towns where there is no municipal service providing for such duties.

The Department of Labour of Ontario.—The Department of Labour of Ontario was established in 1919 and placed under the direction of a Minister and a Deputy Minister of Labour. This Department had its origin in the Bureau of Industries formed in 1882 under the Department of Agriculture, to collect and publish statistics relating to the industries of the province and (later) to administer the first Factory Act of 1886. In 1900 a Bureau of Labour, attached to the Department of Public Works, was authorized to collect and publish information relating to employment, wages and hours, strikes, labour organizations and general conditions of labour. Several investigations were made regarding such matters and the first free employment offices were opened by the Bureau of Labour. In 1916 this Bureau was in turn superseded by the Trades and Labour Branch, also under the Ministry of Public Works but administered by a Superintendent. The establishment of the Branch had been recommended by the Ontario Commission on Unemployment and the expansion of the work undertaken by the Branch, and the increase in the demands made upon its resources, led to the creation of a special Department of the Government by the Department of Labour Act, 1919.

The Department of Labour administers the following Acts: the Department of Labour Act; the Factory, Shop and Office Building Act; the Steam Boiler Act; the Operating Engineers Act; the Building Trades Protection Act; the Employment Agencies Act; the Apprenticeship Act; the Regulations respecting the Protection of Persons working in Compressed Air; the Regulations respecting the Protection of Persons working in Tunnels and Open Caissons; the Minimum Wage Act; the Industrial Standards Act. Under the Industrial Standards Act standard wages and hours of labour are being established through agreements between employers and employees. These agreements, when approved by Order in Council, become binding upon all persons engaged or employed in the industry and in the zone to which the agreement applies. The Department is required to maintain employment offices, to collect information respecting employment, sanitary and other conditions in work places, wages and hours of work, and to study labour legislation in other parts

of the British Empire and in foreign countries, as well as any suggested changes in the labour laws of Ontario. The representatives of the Department of Labour have right of access to offices, factories and other work places at any reasonable hour, and may be authorized to hold inquiries under the Public Inquiries Act. The Department publishes annual reports which cover the work of the officers employed in the administration of the various Acts assigned to it.

Manitoba Department of Labour.—The Act of 1915, establishing the Manitoba Bureau of Labour, provided that it be attached to the Department of Public Works; an amendment of 1922, however, provided for its attachment to any other Department as the Lieutenant-Governor in Council may determine. The Bureau was created a separate Department by c. 28 of the Statutes of Manitoba, 1931, but the Act was not proclaimed until July 6, 1934.

The Department is charged with the administration of the following Acts: the Bureau of Labour Act; the Manitoba Factories Act; the Bake Shop Act; the Shops Regulation Act; the Minimum Wage Act; the Elevator and Hoist Act; the Steam Boiler Act; the Building Trades Protection Act; the Public Buildings Act; the Fair Wage Act; the Electricians' Licence Act; the Amusements Act (Secs. 11 to 15); the One Day's Rest in Seven Act; the Employment Bureau Act.

The Bureau of Labour and Fires Prevention Branch is a sub-department of the Department of Labour (formerly a sub-department of the Department of Public Works). The Bureau also enforces the Fires Prevention Act.

Saskatchewan Bureau of Labour and Public Welfare.—This Bureau was created by an Act of 1934 to replace the Department of Railways, Labour and Industries. It is administered by the Minister of Municipal Affairs, assisted by a permanent Commissioner. The function of the Bureau is to administer matters relating to the relief of distress in addition to the following Acts: the Factories Act; the Building Trades Protection Act; the Employment Agencies Act; the One Day's Rest in Seven Act; the Weekly Half-Holiday Act; the Minimum Wage Act, and Workmen's Wage Act. It is also charged with the operation of public free employment offices; the collection and publication of information and statistics relating to employment; wages and hours of labour throughout the province; strikes and other labour difficulties; trade unions and labour organizations; the relations between capital and labour, and other subjects connected with industrial problems; the commercial, industrial and sanitary conditions of employment.

Alberta Bureau of Labour.—The Act of 1922, creating the Alberta Bureau of Labour, became inoperative during 1936. The administration of the Alberta Government Employment Offices Act has been transferred to the Department of Health, while the administration of the Minimum Wage Act, the Boilers Act, the Factories Act, the Theatres Act, the Trade Schools Act, and the Industrial Standards Act has been transferred to the Department of Trade and Industry.

The British Columbia Department of Labour.—This Department was instituted by an Act of 1917, under a Minister and Deputy Minister of Labour. It administers the laws of British Columbia affecting labour, and is empowered to collect information respecting industries, wages, employment, prices, labour organizations, and other data pertaining to labour problems. Prominent among the Acts administered by the Department are: the Male Minimum Wage Act 1934; the Female Minimum Wage Act 1934; the Hours of Work Act 1934; these are administered by the Board of Industrial Relations, the Deputy Minister of Labour being Chairman of the Board. Other activities of the Department include the adminis-

tration of: the Semi-monthly Payment of Wages Act; the Factories Act; the Apprenticeship Act; the Trade-Schools Regulation Act, and the operation of employment bureaus within the province.

Section 4.—Canada and the International Labour Organization.*

The International Labour Organization of the League of Nations was set up in 1919 in accordance with Part XIII of the Treaties of Peace, to promote the improvement of industrial conditions by legislative action and international agreement.

The Organization comprises: the International Labour Conference, which meets annually and is composed of four representatives of each Member State, two of whom are government delegates, while two represent employers and workers respectively; and the International Labour Office in Geneva, which functions as a secretariat of the annual conference and also collects and publishes information on subjects relating to industrial life and labour. The Office is under the control of a Governing Body, consisting of 32 persons, appointed by the International Labour Conference, of whom 16 represent governments, 8 represent employers and 8 represent workers. In addition to its control of the Labour Office, the Governing Body is charged with the preparation of the agenda of the annual conference.

Under the terms of the Peace Treaties, eight of the government seats on the Governing Body are held by the countries of "chief industrial importance". Canada has been designated by the Council of the League of Nations as one of these eight States of "chief industrial importance". Sixty-one countries are members of the International Labour Organization, comprising all of the industrial states of the world with the exception of Germany. The United States, although not a member of the League of Nations, joined the International Labour Organization in 1935, as did also Russia. Egypt, which was not a member of the League, also joined the International Labour Organization in 1936. Dr. W. A. Riddell, Canadian Advisory Officer to the League of Nations, was honoured in 1935 by being elected Chairman of the Governing Body for the ensuing year. At the triennial election of the Governing Body of the International Labour Office in 1934, Mr. Tom Moore, then President of the Trades and Labour Congress of Canada, was elected as one of the eight workers' representatives on this Body.

The conclusions of the International Labour Conference are cast in the form of draft conventions or recommendations, addressed to the national governments which comprise the membership of the International Labour Organization. A two-thirds majority of the Conference is required for the adoption of either a draft convention or recommendation. Under the Treaties of Peace, the Member States are bound to bring the draft convention or recommendations before the authority or authorities within whose competence the subject matter lies, for the enactment of legislation or other action. Thus the findings of the Conference only become binding in the various countries concerned if and when action regarding them is taken by the latter.

The Dominion Department of Labour is entrusted with the duties arising out of the relations of Canada with the International Labour Organization. These have entailed much correspondence, not only with the International Labour Organization, but also with the different departments of the Dominion Government, with

* On this subject see also the 1921 Year Book, pp. 607-609; 1922-23 Year Book, pp. 704-707; and 1924 Year Book, pp. 666-670.

the provinces, and with employers' and workers' organizations. Replies have also been prepared in the Department of Labour to various questionnaires issued by the International Labour Office. Performance of these duties has necessitated a close study of the different technical questions which have figured on the agenda of the various conferences and at the meetings of the Governing Body.

Twenty-two sessions of the International Labour Conference have been held since its inception in 1919. Fifty-seven draft conventions and 49 recommendations have been adopted at these annual gatherings. The draft conventions and recommendations of the Conference have, among other subjects, related to the following: hours of labour, measures for the avoidance of unemployment, employment conditions of women and children, employment conditions of seamen, employment in agriculture, weekly rest, statistics of immigration and emigration, principles of factory inspection, inspection of emigrants on board ship, workmen's compensation for accidents and occupational diseases, social insurance, minimum wages, prevention of accidents to dockers, forced labour, holidays with pay, and regulation of hours of work of salaried employees and of workers in coal mines.

Up to Dec. 31, 1936, 725 ratifications of these conventions had been registered with the League of Nations, of which 11 were conditional or with delayed application; 36 had been approved by the competent national authority, and 112 had been recommended to the competent national authority for approval.

Canadian Action on Draft Conventions and Recommendations.—Seven draft conventions in all have been ratified by the Dominion Government, namely: (1) minimum age for employment of children at sea; (2) unemployment indemnity for seamen in case of the loss or foundering of a ship; (3) minimum age for employment as trimmers and stokers; (4) medical examination of children and young persons employed at sea; (5) limiting hours of work in industrial undertakings to eight in the day and forty-eight in the week; (6) weekly rest in industrial undertakings; and (7) creation of minimum-wage-fixing machinery. The first four of these conventions were ratified in March, 1926, and the last three in the early part of 1935. At the 1935 session of Parliament resolutions were also adopted approving of three other draft conventions of the International Labour Conference with a view to their subsequent ratification, namely: seamen's articles of agreement; safety of workers engaged in loading and unloading ships; and the marking of weights on heavy packages transported by vessel.

Section 5.—Organized Labour in Canada.

The Dominion Department of Labour publishes, annually, a report on labour organization in Canada. This report outlines the composition and development of the various organizations of wage-earners in the Dominion, and gives statistical and other information respecting membership, benefits, registration of trade unions, etc.

Total Reported Membership of Organized Labour in Canada.—The numerical strength of organized labour in Canada at the close of 1935 was given by the Department of Labour as follows: international organizations, 1,794 local branches with an aggregate membership of 143,570; Canadian central labour bodies, 734 branches and 80,078 members; independent units, 49 with 16,859 members; National Catholic unions, 140 with 38,000 members; Workers' Unity League, 11 with 2,197 members; grand total, 2,728 local branches and 280,704 members. As compared with 1934, this represents a decrease of 12 branches, and of 1,070 members. Table 5 shows by years the membership of trade unions in Canada since 1911.

5.—Membership of Trade Unions in Canada, 1911-35.

Main Groups.—The following paragraphs outline the main groups into which Canadian labour organizations now fall.

Trades and Labour Congress of Canada.—The Trades and Labour Congress is representative of the international trade union movement in the Dominion, the bulk of its membership being drawn from the international organizations which have local branches in Canada. According to reports for 1935, the Congress had in affiliation the Canadian membership of 60 international bodies and the membership of three national organizations as well as that of 81 directly chartered unions, the combined membership being 125,779, comprised in 1,552 local branches.

All-Canadian Congress of Labour.—The All-Canadian Congress of Labour was organized in Montreal, Mar. 16, 1927, by representatives of national and independent organizations. At the close of 1935, the All-Canadian Congress of Labour had eight central bodies in affiliation, with a combined membership of 49,173, as well as 53 directly chartered local unions with a membership of 4,852, making a total combined reported membership of 54,025.

Federation of Catholic Workers of Canada.—In 1918, a conference of National Catholic Unions, which were first established in 1901, was held in Quebec city, followed by other meetings in Three Rivers in 1919 and Chicoutimi in 1920. The delegates at the latter conference, numbering 225 from 120 unions, decided to establish a permanent central body to co-ordinate the work of the scattered units. Accordingly, at the 1921 conference held in Hull, at which approximately 200 delegates representing 89 unions were present, a constitution to govern the new body was approved. The name selected was "Federation of Catholic Workers of Canada", and permanent officers were elected, the constitution and by-laws becoming effective on Jan. 1, 1922. From information at hand, there were at the close of the year (1935) 140 National Catholic Unions, with a combined membership of 38,000.

One Big Union.—At a conference held at Calgary, Alberta, Mar. 13, 1919, by representatives of local trade unions, principally from the four western provinces the One Big Union was established as an industrial organization. According to information supplied by the general secretary, the O.B.U., at the close of 1935, had 53 units under charter, as well as two central labour councils (bodies similar to trades and labour councils), the combined reported membership being 24,055.

Workers' Unity League of Canada.—This organization was established in 1930 and, according to the figures supplied by local union officers, the membership at the close of 1935 was 2,197, comprised in 11 local branches.

International Trade Unions Operating in Canada.—Table 6 gives the names of the 81 international craft labour organizations and the one industrial union which now carry on operations in Canada, and shows: (1) the number of branches which were in existence in the Dominion at the close of 1935, and (2) the reported membership.

Section 6.—Fatal Industrial Accidents.

Statistics of fatal industrial accidents have been compiled by the Dominion Department of Labour since 1903, the data being obtained from provincial Workmen's Compensation Boards, the Board of Railway Commissioners for Canada and various other governmental authorities, from departmental correspondents and from press clippings. Table 8 shows the number of fatal industrial accidents reported to the Department during each year from 1932 to 1936 inclusive. The number of fatalities in each of the different industries is also shown as a percentage of the total number. Preliminary figures show 1,074 fatal accidents in 1936.

¹ Figures subject to revision.

Causes of Fatal Accidents.—The classification of fatal accidents in 1936, by causes, shows that the largest number, 345, came under the category "by moving trains, vehicles, etc.". This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse-drawn vehicles, as well as moving implements, watercraft and aircraft.

"Falls of persons", including those who fell into pits, shafts, holds of vessels, harbours, rivers, etc., caused 197 fatalities. Next in order as a cause came "falling objects", 172 in number. Fatalities numbering 135 were caused by "dangerous substances", including electric current, explosives, hot and inflammable substances, gas fumes, boiler explosions, etc. Animals caused 33 fatalities, including 26 caused by horses. There were 26 fatalities caused by hoisting apparatus, 25 by striking against or being struck by objects, 25 by the handling of heavy or sharp objects, 20 by prime movers, 12 by working machines, and 10 by tools. The heading "other causes" includes 6 fatalities caused by infection, 23 due to industrial diseases, strain, etc., 3 to drownings not elsewhere specified, 8 caused by shooting and violence, 16 by cave-ins, etc., 19 by lightning, frost, storms and sunstroke.

Numbers of industrial accidents, fatal and non-fatal, dealt with by the various provincial Workmen's Compensation Boards, are included in the following section on Workmen's Compensation.

Section 7.—Workmen's Compensation in Canada.

An account of the development of workmen's compensation legislation in Canada from employers' liability legislation was given at pp. 744-746 of the 1927-28 Year Book, while a summary of the legislation with regard to workmen's compensation appears in the general sketch of labour legislation in Canada at pp. 772-778 of the current edition. Details regarding the operation of the various Workmen's Compensation Boards of the provinces are given below.

Operations of the Workmen's Compensation Boards.—Nova Scotia.—The Workmen's Compensation Act was passed in 1915, but only became effective on Jan. 1, 1917. During the twenty years between that date and Dec. 31, 1936, 148,525 accidents were reported to the Board of which 131,426 were compensated as per Table 9. Prior to Jan. 1, 1920, medical aid was furnished only in special cases.

New Brunswick.—The Workmen's Compensation Act of New Brunswick was passed in 1918. It extends to a wide range of industries, and is administered by a Board of three persons, levying assessments and paying benefits. For the sums paid out annually from 1920 to 1936 as compensation and for medical aid, see Table 10.

Quebec.—The Quebec Workmen's Compensation Commission was established in 1928 by authority of cc. 79 and 80 of the Statutes of that year. The Act was brought into force by proclamation on Mar. 22, 1928, operations of the Commission commencing as of Sept. 1, 1928. Under this Act, the Quebec Commission did not insure employers against their liability. On April 4, 1931, a new Act was enacted by the Quebec Legislature (21 Geo. V, c. 100), effective Sept. 1, 1931, providing for state insurance, practically along the same lines as the Workmen's Compensation Act of Ontario. This new Act was amended by 23 Geo. V, c. 98, enacted on April 13, 1933, by 25-26 Geo. V, c. 80, enacted on April 11, 1935, and by 1 Edward VIII, c. 39-40, enacted on Nov. 12, 1936. Table 11 shows the operations of the Quebec Commission from Sept. 1, 1928, to Dec. 31, 1936.

Ontario.—Under the system operated by the Ontario Workmen's Compensation Board in Schedule 1, where the liability is collective, 24 classes of industries pay various percentages of their payrolls annually to the Board, and escape individual civil liability for accidents and certain specified industrial diseases. The percentage of payroll collected by the Board is graded according to the degree of hazard in the occupation and ranged in 1936 from 15 cents per \$100 of payroll in blue-printing, multigraphing or mimeographing to \$12 for aerial testers, flying or demonstrating. The average for all classes was \$1.50 per \$100 of payrolls which amounted to \$425,603,000. Certain other industries under Schedule 2, including municipal undertakings, railways, car shops, telegraphs, telephones, etc., are made individually liable to pay the rates of compensation fixed under the Act. Employees of the Dominion or of the province, killed or injured in the discharge of their duty, are by special legislation placed on the same footing as those of private employers of the second class.

Statistics of the benefits awarded and the accidents to workers reported during the first 22 years of the operation of the Act appear in Table 12; 56,189 accidents were paid for during the year 1936, including: 299 cases of death, 30 of permanent total disability, 584 of permanent partial disability, 25,712 of temporary disability, and 29,564 in which medical aid only was provided. These latter are all under Schedule 1, as medical aid in Schedule 2 cases and Crown cases is furnished directly by the employer.

¹ No provision for medical aid.² Half year only.

Manitoba.—Under the Workmen's Compensation Act, effective Mar. 1, 1917, Part I of the Act, dealing with workmen in hazardous occupations, is administered by the Workmen's Compensation Board, which charges insurance rates according to the hazard of the industry, the sums received by the workman being in lieu of the rights of action previously existing. The province, the city of Winnipeg, and certain corporations operating public utilities are permitted by the law to practise self-insurance.

The Workmen's Compensation Board also administers the provisions of the Dominion Act respecting payment of compensation to employees of His Majesty who are killed or suffer injuries while performing their duties, being Chapter 15 of the Statutes of 1918 and subsequent amendments.

From the date of the coming into force of the Manitoba Workmen's Compensation Act to Dec. 31, 1935, the Board has dealt with 109,804 compensable accidents and paid out \$15,039,848 for compensation and medical aid. Of the accidents in 1935, 4,274 involved medical aid costs only, 3,732 involved temporary and 210 permanent disability, while 21 resulted in death. The figures quoted above and hereunder cover accidents dealt with under both Provincial and Dominion legislation.

13.—Compensation Paid and Accidents Compensated by the Manitoba Workmen's Compensation Board, 1917-35.

NOTE.—All figures for compensation paid for 1919-34, for medical aid paid for 1920-34, and for numbers of accidents compensated for 1921-28 have been revised, owing to the inclusion of Dominion Government cases, which were not included in the figures published in previous editions of the Year Book.

Saskatchewan.—The Workmen's Compensation (Accident Fund) Act became fully effective July 1, 1930, and covers practically all employees in the province except railway employees engaged in the running trades, casual workers, farm and ranch labourers, domestic and menial servants, janitors, retail store employees, and persons who cannot be classed as workmen.

The Act is administered by a Board of three and imposes compulsory collective liability on the employers covered. The schedule of benefits is similar to that provided by other compensation Acts. Table 14 shows the number of accidents and benefits paid to the end of 1935.

¹ Six months.

Alberta.—The Workmen's Compensation Act of 1918 became effective Aug. 1, 1918, as regards mining, and Jan. 1, 1919, in respect of almost all industries except agriculture, railroading, and the operation of retail stores and offices. Railroading (except for the running trades) was brought within the scope of the Act in 1919, and a further amendment in 1928 left only conductors and trainmen exempt from the operations of the Act.

Table 15 shows the operations of the Board for the calendar years 1921 to 1935. Of the 11,058 accidents reported in 1935, 59 were fatal and 72 resulted in some permanent injury. The amounts shown below do not include sums transferred to the pension fund, which had assets amounting to \$3,208,550 on Dec. 31, 1935, nor do they include administration expenses nor sums set aside to cover estimated liabilities. The numbers of accidents compensated shown in the last column do not include claims disposed of by payment only of account for medical aid.

British Columbia.—The Workmen's Compensation Act, effective Jan. 1, 1917, provides compulsory accident insurance in almost every industrial occupation carried on in the province, protecting in 1935 approximately 130,000 employees with a payroll of almost \$125,000,000. Insurance rates levied against employers are graded according to the hazard of the industry. All employers under the Act are required, in addition, to deduct one cent per day or part thereof from the wages of employees and to remit this money to the Board to the credit of the medical aid fund, which provides all necessary medical, surgical and hospital expenses for injured employees. For figures see Table 16.

Section 8.—Strikes and Lockouts.

Statistics of strikes and lockouts in Canada have been collected by the Dominion Department of Labour since its establishment in 1900. Table 17 shows the numbers of disputes, of employees involved in disputes, and the time loss in working days for each year from 1921 to 1936 and the totals for the period beginning 1901. The items in the columns headed "time loss in man-working days" in the tables following are calculated by multiplying the number of persons directly involved in strikes and lockouts by the number of working days they are so affected during the time the disputes are in existence. Tables 18 and 19 give detailed analyses, by provinces and by industries, for 1935 and 1936.

Summary tables of the figures with details as to strikes and lockouts during 1936 will be found in the *Labour Gazette* for March, 1937; pp. 267-296.

Industrial Disputes in Recent Years.—From 1930 to 1936 the figures as to numbers of strikes and lockouts, numbers of employees involved and time loss were substantially greater than during the period 1926 to 1930, but were still much lower than during the years prior to 1926 when coal-mining strikes involved large numbers of employees and resulted in great time loss. Since 1930 most of the important disputes have been in clothing manufacturing, logging, sawmilling and wood-working industries, with a substantial number in coal mining. In 1936, there were important disputes in silk and cotton textile factories in Ontario and Quebec, and in fur and leather manufacturing in Winnipeg, Toronto, and Montreal. The number of disputes in 1936 was 156 as compared with 120 in 1935, while the number of workers involved was 34,812 as compared with 33,269 in 1935, the time loss being 276,997 man-working days as compared with 284,028 in 1935. Table 17 includes figures regarding coal mining, industries other than coal mining, and all industries.

17.—Strikes and Lockouts in the Coal Mining, Other, and All Industries in Canada, calendar years 1921-36.

NOTE.—For the years 1901-20, see the 1933 Year Book, p. 763.

¹ Figures for disputes extending over the end of a year are here counted more than once. ² The totals are for the whole period of record, 1901-36. ³ No classification of All Industries totals made for the earlier years. ⁴ Revised since the publication of the 1936 Year Book.

Table 18 is a record of industrial disputes by provinces for the years 1935 and 1936. In 1935, the outstanding strikes, by industries, were located in the provinces as follows: in Ontario in the logging, furniture, sawmilling, metal, shoe and clothing industries; in British Columbia in coal and gold mining, water transportation, fishing and agriculture; in Nova Scotia in coal mining; in Quebec in clothing (including a millinery strike), cotton manufacturing and water transportation; in Manitoba and Alberta in printing. In 1936, the important disputes by provinces and industries were as follows: in Ontario in textile and clothing manufacturing; in British Columbia in fishing, logging and water transportation (longshoremen); in Nova Scotia in coal mining; in Quebec in cotton, silk and dress manufacturing, and in transportation (taxi drivers); in Alberta in coal mining; and in Manitoba in fur and men's work clothing manufacturing.

Table 19 shows strikes and lockouts by industries during 1935 and 1936, the most important in 1935 occurring in logging, mining, shoe and clothing manufacturing, sawmilling, woodworking, and water transportation, and during 1936 in the same industries with the addition of textile manufacturing and fishing.

Causes and Results of Industrial Disputes.—In each of the previous years, since the record was begun in 1901, the most important cause of disputes has been changes in wages, but in 1936 union questions led to a greater number of disputes, involving more workers and causing greater time loss. The number of such disputes was 64 as compared with 61 in which wages were chiefly in dispute. The increase in 1936 was chiefly in disputes over union recognition and in those due to discharge of workers for union membership and activity. In both years one-half of the disputes were terminated by direct negotiation between the parties and approximately one-quarter by the return of workers or their replacement.

In 1935 and 1936 there was a marked gain in the proportion of strikes settled by conciliation and arbitration, there being roughly one-quarter as compared with about one-eighth in recent years.

¹ Non-ferrous smelting is included with Mining; erection of all large bridges is under Bridge Construction; water service is under Public Administration.

Section 9.—Employment and Unemployment.

Subsection 1.—Operations of the Employment Service of Canada.

Employment Service of Canada.—Under Sec. 3 of the Employment Offices Co-ordination Act (c. 57, R.S.C., 1927), an Act passed by the Dominion Parliament in May, 1918, the Minister of Labour is empowered:—

“(a) to aid and encourage the organization and co-ordination of employment offices and to promote uniformity of methods among them;

“(b) to establish one or more clearing houses for the interchange of information between employment offices concerning the transfer of labour and other matters;

“(c) to compile and distribute information received from employment offices and from other sources regarding prevailing conditions of employment.”

The Act further provides that certain sums of money are to be appropriated annually and paid to the provinces on a basis proportionate to the amount that each expends on the maintenance of employment offices.

The desired uniformity and co-ordination of employment office activities throughout the various provinces are obtained by having the Dominion's payments contingent upon an agreement ensuring that the provinces, in the conduct of their employment offices, shall endeavour to fill situations in all trades and occupations for both men and women, and that no charge shall be made to employers or employees for this service. Each province agrees to maintain a provincial clearance system in co-operation with the interprovincial clearance system established by the Dominion Government, in order to secure the necessary mobility of labour as between localities in the same province or in different provinces. For the fiscal year 1936-37, agreements were concluded with all of the provinces except Prince Edward Island. Thus is formed the Employment Service of Canada—a chain of employment offices reaching from Halifax to Vancouver. At the time the Act came into force only 12 provincial employment offices were operated in Canada. This number was steadily increased until, at the close of 1919, due to the impetus given by the Employment Offices Co-ordination Act together with the requirements of the demobilization period, offices were functioning at 84 different centres. Subsequent contractions have reduced the Service to offices permanently located at 66 centres (on Dec. 31, 1936), distributed by provinces as follows: Nova Scotia, 3; New Brunswick, 4; Quebec, 8; Ontario, 27; Manitoba, 2; Saskatchewan, 9; Alberta, 5; and British Columbia, 8.

Employment Service Council of Canada.—An Order in Council, issued in 1918 in pursuance of the Act, provided for the formation of a body to be advisory to the Minister of Labour in the administration of the Act. This body, known as the Employment Service Council of Canada, is composed of representatives of the Dominion Departments of Labour and of Pensions and National Health, the Provincial Governments, the Canadian Manufacturers' Association, the Canadian Construction Association, the Trades and Labour Congress of Canada, the Railway Association of Canada, the Railway Brotherhoods, the Canadian Lumbermen's Association, the Canadian Council of Agriculture and the returned soldiers. At the eleven meetings of the Council, the most recent of which was held on Aug. 21-22, 1930, various recommendations and suggestions relative to employment office administration were brought forward and presented to the Minister.

Operations of Employment Offices.—Statistics covering the work of the local offices are collected and tabulated by the Employment Service Branch of the Department of Labour. Table 20 shows the positions available, applications for work and placements effected by the Service in each year since 1920 for the Dominion, and for the years 1935 and 1936 by provinces. During 1936 there were 680,053 applications for employment, 355,376 vacancies and 331,450 placements recorded, as compared with 656,421 applications, 376,574 vacancies and 353,802 placements in 1935. About 34 p.c. of the total placements were of a casual nature, many of these being the result of work given on a rotation basis by municipalities and Provincial Governments on various relief schemes throughout the year to persons who, otherwise, would have been unemployed.

Reduced Railway Fares.—In order to facilitate the movement of labour in cases where there were not enough workers in any one locality to fill the available vacancies, the Employment Service, by special arrangement with nearly all the members of the Canadian Passenger Association, has been granted the privilege of

issuing certificates which entitle the bearers to purchase railway tickets at the reduced rate of 2.5 cents per mile. This rate is for a second-class ticket and is applicable only to fares of not less than \$4. During 1936, 9,045 certificates were issued, 8,254 to persons proceeding to points within the same province as the dispatching office and 791 to workers going to points in other provinces. During 1935, 7,999 certificates for special rates were granted, 7,171 to persons travelling to employment within the same province as the dispatching office and 828 to persons for whom employment had been secured in other provinces.

20.—Applications for Employment, Positions Offered and Placements Effected by the Employment Service of Canada, 1920-36, and by Provinces, 1935 and 1936.

NOTE.—Figures by provinces for the years 1920-25 will be found at p. 703 of the 1926 Year Book, for 1926-28 at p. 731 of the 1930 Year Book, for 1929-30 at p. 773 of the 1931 Year Book, for 1931-32 at p. 768 of the 1933 Year Book, for 1933 at p. 826 of the 1934-35 Year Book, and for 1934 at p. 767 of the 1936 Year Book.

Subsection 2.—Unemployment as Reported by Trade Unions.

Monthly statistics on unemployment are compiled and published by the Employment Service Branch of the Dominion Department of Labour, based on returns received from 1,800 local trade unions having an aggregate membership of nearly 178,000 workers. "Unemployment" as here used means involuntary idleness, due to economic causes. Persons engaged in work other than their own trades, or idle because of illness, are not considered as unemployed, while unions involved in industrial disputes are excluded from the tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentages of unemployment are based, it should be understood that the figures for each month have reference only to the reporting organizations. Table 21 is a record of unemployment in trade unions, for the past 11 years, by provinces. The maximum of unemployment in 1936 was in April,

when the percentage stood at 15.1; the 1936 low was 10.8 p.c. recorded in August. In 1935 the February figure of 18.2 p.c. constituted the maximum, and the minimum of 13.0 p.c. was reached in September. Employment among organized workers, as indicated by these statistics, was more active on the average in 1936 than in 1935, the average of the monthly figures of unemployment for 1936 being 13.2 p.c., while for 1935 the corresponding figure was 15.4 p.c.

21.—Percentages of Unemployment in Trade Unions, by Provinces, half-yearly, 1926-35, and by months, 1936.

NOTE.—For percentages of unemployment at June 30 and Dec. 31 from December, 1915, to December 1925, see p. 827 of the 1934-35 edition of the Year Book. For data by months from 1921, see successive issues of the Year Book commencing with the 1922-23 edition.

Subsection 3.—Employment as Reported by Employers.

The Dominion Bureau of Statistics tabulates monthly reports of the numbers employed by firms having 15 or more persons on their staffs; the returns are representative of practically every industry except agriculture and the more specialized business and professional callings. During 1936, about 9,720 of these employers reported an average working force of 979,741 persons, varying from 918,716 at April 1, to 1,052,985 at the beginning of November.

Further moderate improvement was shown in industrial employment in Canada during 1936, continuing the favourable trend which, with few interruptions, has been in evidence during the past four years. On the whole, the fluctuations during 1936 were not so pronounced as those in the preceding year, the increase in the number of persons at work being accompanied by an increase in the regularity

of their employment. The general improvement during 1936 compared with 1935 was rather greater than that in 1935 over 1934. The consolidation of the gains made in the past few years, and their extension to lines which had been slower in responding to the upward movement originating in 1933, resulted in a generally higher level of industrial employment in 1936 than in any other year since 1930. At the 1936 peak at Nov. 1, the index stood at 111.0, which was the maximum in 72 months.

In 1936, as in 1935, public work undertaken primarily for the relief of unemployment was a factor of diminishing importance in the general situation; the number of persons provided with such employment was smaller in the year under review than in 1935, when it in turn had not been so large as in 1934 and 1933. The more favourable situation which existed therefore gave encouraging evidence of a natural revival in business resulting from a greater public demand for commodities and services, rather than from artificially stimulated activity.

The number of man-days worked on a wage basis on relief projects as reported to the Dominion Commissioner of Unemployment Relief by the provinces and Dominion Departments for the twelve months January to December, 1936, was 3,188,155. The average number of men afforded employment per month during the year was 19,719. In camps operated by the Dominion or by the provinces where single men were given useful work in return for subsistence and a small cash allowance, 3,656,735 man-days relief was afforded during 1936. These figures include 2,683,461 man-days relief afforded in camps administered by the Department of National Defence which were in operation from January to June, during which period an average monthly number of 18,103 single men were cared for (after June practically all these men were afforded employment on the railways in connection with the program of maintenance of way and betterment works carried out under arrangements made between the Dominion Government and the Railways). All of the above figures are subject to revision when final reports are received.

During the year 1935 the number of man-days worked on a wage basis was reported as 4,388,225 and the average number of men afforded employment per month was 25,047. The number of man-days relief afforded on a subsistence basis in 1935 was 6,750,621 and the average number of men cared for monthly on this basis was 23,935.

The fluctuations in employment in the past ten years are illustrated in the chart on p. 756. This shows to September, 1936, the generally upward movement that has characterized industrial activity since the low point of employment in the depression was reached at April, 1933.

Employment by Economic Areas.—The revival in industrial activity during 1936 extended in greater or less degree to all five economic areas. The situation at the end of 1936 was better in each of these districts than it had been at the opening of the year and, except in the Prairie Provinces, was also better than at the end of any of the preceding four years. In Manitoba, Saskatchewan, and Alberta, taken as a unit, the index was slightly lower than at the close of 1935, but was higher than towards the end of 1934, 1933 and 1932. The greatest proportional gain between the 1936 low and high points occurred in Quebec, where the maximum of activity was at Dec. 1; the index then stood at 112.6, being 21.2 points higher than the minimum of 91.4 recorded at April 1. Employment in all five economic areas was greater, on the average, than in the twelve months of 1935, being also at a more satisfactory level than in 1934, 1933 or 1932. In the Maritime Provinces, there was a gain of 5.5 p.c. in the 1936 mean over that for 1935, in Quebec of 5.6 p.c., in Ontario of 3.3 p.c., in the Prairie Provinces, of 4.3 p.c. and in British Columbia of 3.5 p.c. Table 22 is a record of employment in the five economic areas, by months, in 1935 and 1936, with averages for preceding years since 1921.

22.—Index Numbers of Employment as Reported by Employers in Economic Areas, as at the First of each Month, January, 1935, to December, 1936, with Yearly Averages since 1921.

NOTE.—These indexes are calculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of employees reported in the indicated economic area to the total reported by all employers making returns in Canada at Dec. 1, 1936.

Averages, 1936.....	109.4	100.7	106.7	99.3	101.1	103.7
Relative weights of employment in economic areas, as at Dec. 1, 1936 ²	7.9	29.9	42.0	12.0	8.2	100.0

¹ Since the average for the calendar year 1926, including figures up to Dec. 31, 1926, is the base used in computing these indexes, the average index here given for the 12 months Jan. 1-Dec. 1, 1926, generally shows a slight variation from 100.

² Percentages of Dominion total.

Employment by Cities.—Improvement in industrial employment was reported in seven of the eight centres for which statistics are segregated, *viz.*, Montreal, Toronto, Ottawa, Hamilton, Windsor, Winnipeg, and Vancouver, while in Quebec city there was a slight recession. The gains were relatively greater during 1936 in Hamilton and Vancouver than in the other cities. As in 1935, the recovery in these cities, which during 1933 and 1934 had been generally at a slower rate than in the Dominion as a whole, was in 1936 slightly more pronounced. Their index numbers showed an average advance of 4.9 p.c., as compared with the general increase of 4.3 p.c. in the Dominion. The continued improvement in manufacturing and trade in recent months largely accounts for this situation.

The reports show that employment was again maintained at a generally higher level in Ottawa and Windsor than in the other centres above named, while, as in 1935, the lowest indexes were indicated in Montreal and Winnipeg. Table 23 gives monthly indexes in the cities in 1935 and 1936, with yearly averages since 1922.

Employment by Industries.—An analysis of the data furnished by employers shows that practically all industries except highway construction shared in the improvement noted during 1936 as compared with 1935. Manufacturing experienced a lengthy period of expansion, during which the general increase exceeded that indicated, on the average, in the same months of the years, 1921-35; to this advance, most of the various branches of factory employment contributed to a greater or lesser degree. Logging, on the whole, was unusually active, the average index, at 138.7, being considerably higher than the 1935 mean of 126.9. Mining particularly of metallic ores, advanced during many months, with the result that employment in that group as a whole was brisker than in any other year of the record. Building construction generally remained at the same level as in 1935 continuing in small volume as compared with years of normal activity; employment

in railway construction was brisker than in the preceding year, but highway construction employed a smaller number of men, partly as a result of changes in the unemployment relief policies of the various governments. Services and trade were more active, stimulated to some extent by a better tourist season, as well as by the general improvement in business. Table 24 gives index numbers of employment by main industrial groups.

23.—Index Numbers of Employment as Reported by Employers in Leading Cities, as at the First of each Month, January, 1935, to December, 1936, with Yearly Averages since 1922.

NOTE.—These indexes are calculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of employees reported in the indicated city to the total reported by all employers making returns in Canada at Dec. 1, 1936.

² Percentages of Dominion total.

³ Except agriculture (see p. 755).

Subsection 4.—Unemployment Relief.

The assistance rendered by the Dominion Government under the Unemployment Relief Act, 1930, the Unemployment and Farm Relief Act, 1931, the Relief Act, 1932, the Relief Act, 1933, the Relief Act, 1934, and the Relief Act, 1935, is fully set out in previous issues of the Canada Year Book. The recapitulation appearing at the end of this statement shows the Dominion's disbursements under those statutes as at Oct. 31, 1936.

The Unemployment Relief and Assistance Act, 1936.—At the first session of the 18th Parliament, the Unemployment Relief and Assistance Act, 1936, which received Royal Assent on May 7, 1936, was enacted.

Section 2 of the Act provides that it shall be administered by the Minister of Labour.

Under this statute, the Dominion is continuing to pay to the provinces monthly grants-in-aid to assist the provinces in discharging their responsibilities in connection with the relief of necessitous persons within their respective boundaries. The amounts of the monthly grants to the provinces, which had been increased by 75 p.c. for the period December, 1935, to March, 1936, were reduced 15 p.c. for the first three months of the fiscal year 1936-37, the monthly grants paid to the provinces for April, May, and June, 1936, being as follows: Prince Edward Island, \$3,160·94; Nova Scotia, \$59,500·00; New Brunswick, \$37,187·50; Quebec, \$743,750·00; Ontario, \$892,500·00; Manitoba, \$200,812·50; Saskatchewan, \$297,500·00; Alberta, \$148,750·00; British Columbia, \$223,125·00.

The amounts of the monthly grants-in-aid paid to the provinces for the months of July, August, September, and authorized for October, November, and December, were reduced by 10 p.c., making the monthly grants-in-aid for that period as follows: Prince Edward Island, \$2,844·85; Nova Scotia, \$53,550·00; New Brunswick, \$33,468·75; Quebec, \$669,375·00; Ontario, \$803,250·00; Manitoba, \$180,731·25; Saskatchewan, \$267,750·00; Alberta, \$133,875·00; British Columbia, \$200,812·50.

In addition to payment of the monthly grants-in-aid above referred to, agreements have been entered into, under the provisions of the Unemployment Relief and Assistance Act, 1936, with all the provinces providing for Dominion contribution of 50 p.c. of the provinces' cost of construction on the Trans-Canada and other provincial highways.

Provision is also made in the agreements for Dominion contributions to the cost of construction of mining roads in the provinces of Manitoba, Saskatchewan, Alberta, and British Columbia.

The agreements with the provinces further provide for Dominion assistance toward the cost of the following relief measures: Prince Edward Island, municipal works; Quebec, municipal works; Ontario, municipal works; Manitoba, municipal and provincial works; Saskatchewan, moving and placing on suitable farming land in northern parts of the province, agricultural settlers and assisting said settlers so placed, also provincial undertakings consisting of drainage projects and construction of a rock dam; Alberta, moving and placing agricultural settlers on suitable farming land in northern parts of the province, assisting settlers so placed, and moving feed and fodder into dried out areas.

At the date of this statement, namely, Oct. 31, 1936, agreements had been entered into with the four western provinces, while negotiations for the consummation of similar agreements were being carried out with the other provinces, for the purpose of placing on farms unemployed persons, without means of support, who would otherwise be in receipt of direct relief. The agreements make provision for payment to the farmer of \$5 per month, and payment to the individual placed on the farm of a rate equal, at the end of the period, to \$7·50 per month. Provision is also made for the purchase, for each individual placed, of suitable work clothing not in excess of \$3, while the Dominion is to contribute to the necessary cost of transportation of workers from the point of employment to the home of the employing farmer. The Dominion's contribution under the Farm Improvement and

Employment agreements is to be 50 p.c. of each province's cost of the aforementioned measures, exclusive of the cost of administration.

Recognizing as a national emergency the very serious drought conditions which developed, during the crop season of 1936, in large agricultural areas of the three Prairie Provinces, the Dominion entered into agreements with those provinces whereby it has undertaken to pay all costs (other than those of provincial administration) incurred by the provinces for food, fuel, clothing and necessary shelter supplied, from Sept. 1, 1936, to Mar. 31, 1937, to all permanent residents of the defined areas in need of direct relief, excepting those located in cities or towns within the areas, which latter are being cared for by the provinces and municipalities with the assistance of the Dominion grants-in-aid above mentioned. The agreements provide that the measure of relief granted pursuant to the arrangement shall not exceed that given to similar needy in other rural sections of the provinces.

25.—Number of Settler Families and Individuals Approved and Settled under the Relief Acts Agreements to Oct. 31, 1936.

Province.	Settler Families.	Total Individuals.
Nova Scotia.....	341	1,799
Quebec.....	976	5,029
Ontario.....	606	2,384
Manitoba.....	915	3,470
Saskatchewan.....	939	3,665
Alberta.....	650	2,411
British Columbia.....	52	233
Totals.....	4,479	18,991

Under the provisions of the Relief Act, 1932, agreements were completed with all the provinces, except Prince Edward Island, providing for a non-recoverable expenditure of one-third of an amount not to exceed \$600 per family for the purpose of providing, to families who would otherwise be in receipt of direct relief, a measure of self-sustaining relief by placing such families on the land. It was provided that the remaining two-thirds of the expenditure should be contributed by the province and the municipality concerned. The agreements covered a period of two years and expired on Mar. 31, 1934.

Under the provisions of the Relief Acts of 1934 and 1935, agreements, effective from April 1, 1934, to Mar. 31, 1936, providing continuity of settlement with the agreements which expired Mar. 31, 1934, were entered into with all the provinces excepting Prince Edward Island. Provision is made in the agreements for an additional non-recoverable contribution by the Dominion, on the recommendation of the province and with the approval of the Governor in Council, of one-third of an amount not exceeding \$100 in the case of a settler who may not be self-supporting at the end of the two-year period, and for whom subsistence expenditure during the third year of settlement is deemed necessary. This additional amount for subsistence during the third year, where necessary, applied both to those settled under the 1932 agreement and those settled under the renewal agreement.

Under the provisions of the Unemployment Relief and Assistance Act, 1936, further agreements, effective from April 1, 1936, to Mar. 31, 1940, providing continuity of settlement with the agreements which expired Mar. 31, 1936, have been entered into with the provinces of Manitoba and Alberta. Provision is made in said agreements for placement of further families on the land, and a non-recoverable expenditure of one-third of an amount not to exceed \$1,000 per family for a period

of four years. Provision is also made on behalf of families settled under previous agreements, for an additional non-recoverable contribution by the Dominion of one-third of an amount not exceeding \$80 per family for fourth year of settlement and \$70 per family for fifth year of settlement.

Table 26 sets forth the Dominion's disbursements under relief legislation from 1930 to Oct. 31, 1936, namely, the Unemployment Relief Act, 1930; the Unemployment and Farm Relief Act, 1931; the Relief Act, 1932; the Relief Act, 1933; the Relief Act, 1934; the Relief Act, 1935, and the Unemployment Relief and Assistance Act, 1936.

A summary of loans and advances outstanding as at the same date is also shown.

Subsection 5.—Employment and Unemployment Statistics of the Census.

In the 1933 edition of the Year Book, pp. 775-780 were devoted to an examination of the preliminary figures of unemployment as reported at June 1, 1931, for that date and for the preceding twelve months. The final results of this inquiry are available in Vol. VI. of the Census Publications, which may be obtained from the King's Printer, Ottawa, at a price of 75 cents for the paper-bound volume.

Tables 24 and 25, on p. 836 of the 1934-35 Year Book, summarize, by industries, the statistics of those actually unemployed at the date of the Census, and of time lost during the twelve months preceding that date.

Section 10.—Pensions for the Aged and the Blind.

The Old Age Pensions Act, 1927.—Legislation respecting Old Age Pensions (R.S.C., 1927, c. 156) was adopted by the Dominion Parliament in 1927. Under the provisions of this statute the Dominion Government reimbursed each province participating in the Dominion scheme to the extent of one-half of the provincial expenditure for old age pensions. An amendment passed at the 1931 session of Parliament (c. 42, Statutes of 1931) provided that the Dominion contribution to the provinces be increased from 50 p.c. to 75 p.c. of the provincial disbursements for old age pensions pursuant to a provincial statute authorizing and providing for the payment of such pensions to the persons and under the conditions specified in the Act and the regulations made thereunder. Following the enactment of the amendment to the Dominion Act, the Dominion Old Age Pensions Regulations were revised and agreements negotiated with the provinces whereby the Dominion contribution of 75 p.c. of provincial disbursements was made effective from Nov. 1, 1931; the provinces have since been reimbursed on this basis.

Sec. 5 of the Act provides that before any agreement is made with a province the scheme for the administration of pensions proposed to be adopted by the province shall be approved by the Governor in Council, and that no change in such scheme shall be made without the consent of the Governor in Council.

Sec. 8 reads as follows:—

(1) Provision shall be made for the payment of a pension to every person who, at the date of the proposed commencement of the pension:—

- (a) is a British subject, or, being a widow, who is not a British subject, was such before her marriage;
- (b) has attained the age of seventy years;
- (c) has resided in Canada for the twenty years immediately preceding the date aforesaid;
- (d) has resided in the province in which the application for pension is made for the five years immediately preceding the said date;
- (e) is not an Indian as defined by the Indian Act;
- (f) is not in receipt of an income of as much as three hundred and sixty-five dollars (\$365) a year; and
- (g) has not made any voluntary assignment or transfer of property for the purpose of qualifying for a pension.

(2) The receipt of a pension shall not by itself constitute a disqualification from voting at any provincial or municipal election.

Sec. 9 provides that the maximum pension payable shall be \$240 yearly, subject to reduction by the amount of the income of the pensioner in excess of \$125 a year. The pension authority may accept a transfer of the pensioner's interest in a dwelling house in which he resides, in which case the value of the dwelling is not considered in calculating the amount of pension payable. The pension authority is entitled to recover out of the estate of any deceased pensioner the amount of pension payments with interest at 5 p.c. per annum, compounded annually, subject to the limitation that no claim shall be made for such recovery out of any part of the estate which passes by will or on an intestacy to any other pensioner or to any person who has, since the grant of the pension or for the last three years during which the pension has been paid, regularly contributed to the pensioner's support by the payment of money or otherwise to an extent which, having regard to the means of the person so having contributed, is considered by the pension authority to be reasonable.

Secs. 10 and 12 provide for the distribution of the pension burden among the provinces in which the pensioner has resided during the 20 years immediately preceding the grant of the pension. Secs. 13 and 14 provide for the distribution of the pension burden where a pensioner moves from one province to another after pension has been granted. Sec. 11 provides for the reduction of pension where a pensioner has resided for a portion of the 20 aforementioned years in a province

with which no agreement has been made. Sec. 15 provides for the suspension of pension where a pensioner has transferred his residence to some place out of Canada. It is provided by Sec. 16 that a pension shall not be subject to alienation or transfer by the pensioner or to seizure in satisfaction of any claim against him.

The Governor in Council was empowered by Sec. 19 of the Act to make regulations pursuant to this section. Existing regulations were revised and approved by an Order in Council dated Feb. 1, 1932.

The Dominion Old Age Pensions Act is now operative in all provinces and in the Northwest Territories.

The Gold Commissioner of Yukon was given authority, by a Yukon Territorial Council Ordinance passed in 1927, to enter into an agreement with the Dominion Government for the purpose of obtaining the benefits of the Old Age Pensions Act for residents in the Territory. No proposed scheme of administration for adoption in Yukon has been submitted for the approval of the Governor in Council.

¹ The province of Quebec has entered into an agreement with the Dominion for the payment of pensions commencing Aug. 1, 1936, but statistics for this province are not available for the five months.

Pensions for the Blind.—By an amendment to the Old Age Pensions Act provision is made for the payment of a pension to every blind person who, at the date of the proposed commencement of pension:—

- (a) is, and continues to be, so blind as to be unable to perform any work for which eyesight is essential;
- (b) has attained the age of forty years;
- (c) is not in receipt of a pension in respect of blindness under the Pension Act, or an allowance under the War Veterans' Allowance Act;
- (d) is:—
 - (i) unmarried, or a widower without a child or children, or a widow without a child or children, and is not in receipt of an income of as much as four hundred and forty dollars a year, or
 - (ii) married, or a widower with a child or children, or a widow with a child or children and is not in receipt of an income of as much as six hundred and forty dollars a year; and
- (e) fulfils the conditions laid down in paragraphs (a), (c), (d), (e), and (g) of Subsection 1 of Section 8 of the Act.

The maximum pension payable to a blind person is two hundred and forty dollars yearly except in the case of a blind person, who, after the coming into force of the amendment to the Act, marries a person so blind as to be unable to perform any work for which eyesight is essential. The maximum pension in such a case is one hundred and twenty dollars yearly.

The amended Act provides that pensions payable to blind persons shall be subject to reduction as follows:—

- (a) in the case of an unmarried person or a widower without a child or children or a widow without a child or children, by the amount of the income of the pensioner in excess of two hundred dollars a year;
- (b) in the case of a married person or a widower with a child or children or a widow with a child or children, by the amount of the income of the pensioner in excess of four hundred dollars a year;
- (c) in the case of a person married to a blind person receiving a pension under the amended Act, by the amount of the income of the pensioner in excess of two hundred dollars a year.

It is also provided that no blind person who is married, or is a widower with a child or children, or a widow with a child or children, shall be entitled to any pension in excess of the pension to which an unmarried person is entitled unless such married person and his or her spouse or such widower or widow and one or more of his or her children are living together.

The Governor in Council is empowered to make regulations with regard to pensions for blind persons and to define the expression "is so blind as to be unable to perform any work for which eyesight is essential".

Section 11.—The Co-operative Movement in Canada.

A general article on "The Co-operative Movement in Canada" appeared at pp. 704-720 of the 1925 edition of the Year Book under the three sub-headings of "Consumers' Co-operation", "Co-operative Credit", and "Producers' Co-operation".* Because of the pressure upon space, this article is not reprinted here, but a digest of the latest available material on each of these three subdivisions of co-operation follows, the presentation of producers' co-operation being confined to that among agricultural producers.

The Co-operative Union of Canada was formed in 1909, with six affiliated societies and 1,595 members. In 1935, 49 societies reported to the Union, their

* The article referred to above was prepared for the Year Book by Miss Margaret Mackintosh, M.A., of the Department of Labour, Ottawa.

membership being 45,919. The sales of the reporting societies totalled \$9,142,103 and the purchase dividends returned to their members amounted to \$176,315. The classes of co-operative activities covered included retailing, wholesale trading, marketing, dairying, and transportation societies.

Since October, 1909, the Union has published a monthly, *The Canadian Co-operator*, from which these statistics and those in Subsection 1 have been taken.*

Subsection 1.—Consumers' Co-operation.

The statistics in Table 28, which cover only those retail societies reporting to the Co-operative Union of Canada, cannot be considered as strictly comparable due to the fact that, should a large society fail to report in any one year (and this has frequently happened in the past), an apparent decrease in the activities of the societies, not in line with actual conditions, would result.

The following notes, covering membership only, will help the reader to judge the real trend of consumers' co-operative activity: the increase of 624 in 1932 was, in part, due to the failure of 2 existing societies to report in 1931, although 3 new societies reported a membership of 583; in 1933, of the total increase of 1,354, 1,058 was due to the reporting, for the first time, of 4 societies which had been in existence from 2 to 5 years, while one new society reported 57 members; in 1934, the apparent increase of 418 is lessened by the fact that it includes 210 members of a society which did not report in 1933, one new society, with 44 members, reported in 1934; in 1935 the situation is complicated by the fact that 6 societies which reported in the previous year failed to do so in 1935, their 1934 membership totalled 736; on the other hand, 2 previously-existing societies, which did not report in 1934, reported 177 members and 3 new societies reported 525 members. As these two factors almost balance, it would appear that the existing societies increased their membership by nearly 600.

* For details regarding the Co-operative Union of Canada and its activities, see the 1925 Year Book, pp. 708-709.

Subsection 2.—Co-operative Credit in Quebec.

A form of co-operation which has achieved great success is that which provides short-term credit for small farmers and industrial workers in the province of Quebec. In 1900, what are known as "Les Caisses Populaires", or People's Banks, were begun with the establishment, by the late Alphonse Desjardins, of La Caisse Populaire at Lévis. M. Desjardins adopted the principles of lending money only for approved purposes to carefully selected members in a restricted area, of limited liability, of withdrawable shares of small amount payable by instalments, and of distribution of profits. These banks are for the most part established in agricultural districts. Loans are made to purchase agricultural implements at cash prices, to increase farm live stock, to improve farm buildings, to tide over a period of depression, to pay off a merchant, and for various similar purposes. The loans, though comprised within the term "short credit", are for longer periods than are usual in ordinary commercial transactions because agricultural operations necessarily extend over longer periods than those of trade. They may be for 12, 15, or even 24 months, because they must give time for the farmer to realize on his products.

Details of organization may be found in the Statistical Year Book of Quebec, in the 1936 edition of which may be found statistics of the system as a whole. Complete information of the working of each individual bank, including such details as number of members and depositors, rates of interest paid, loans made and profits realized, classification of size of loans, receipts and expenses and a résumé of chief operations from 1915 to 1935, are published in the report entitled "Co-operative People's Banks and Co-operative Agricultural Societies".

Table 29 shows the progress of these banks by quinquennial years from 1915 to 1930 and annually since then.

Subsection 3.—Agricultural Co-operation in Canada in 1935.*

Farmers' co-operative business organizations occupy an important position in the marketing of Canadian agricultural products. The activities of the larger organizations such as the wheat pools, live stock, and fruit co-operatives have reached a high stage of development, and have received world-wide recognition. In addition to these are hundreds of comparatively small organizations which are working effectively to serve local areas.

Available statistics show 781 co-operative associations actively engaged in business in 1935. The 781 associations have 2,485 branches which combined make a total of 3,266 places of business engaged in the marketing of farm products and the purchase of supplies for farmers. The shareholders and members financially interested number 366,885 and patrons reported total 406,321. Combined assets total \$85,751,901 with plant and equipment valued at \$35,289,468. The members equity amounts to \$51,086,691 consisting of paid-up share capital \$8,954,135 and reserves and surplus of \$42,132,556. Sales of farm products for the year under review amounted to \$144,962,609. The sales value of supplies handled totalled \$12,788,192 and other revenue \$414,764, which combined means a total business of \$158,165,565.

Available records indicate that the most important early activity of farmers in the field of co-operation in Canada was directed toward the marketing of farm products. In comparing the volume of business, marketing associations transact twenty times the business handled by purchasing agencies. Membership in the co-operative marketing associations is given as 335,651 persons compared with 30,012 members in purchasing organizations.

Within the marketing group the grain and seed co-operatives, which include the wheat pools of Western Canada, have the largest membership and investment, and exceed all other commodity groups in volume of business, which is estimated at \$99,612,837 for the year under review. A membership of 191,635 grain growers contributed to this business through 2,128 co-operative marketing agencies. Mainly through deductions from the selling price of their grain, these members have invested a sum of \$37,836,404 in their business and in addition have paid up \$3,420,345 in share capital. Combined assets total \$67,727,047.

One hundred and thirty-six dairy co-operatives with 142 depots in Canada reported a membership of 33,211 with assets valued at \$4,478,737. Paid-up share capital amounts to \$1,899,715 with reserves of \$868,400. Sales of dairy products totalled \$11,631,338 for the year under review.

The records for 59 live-stock shipping and marketing associations show a combined membership of 35,544. Financing of these associations is mainly by membership fees and commissions. Assets are comparatively low with value of plant and equipment amounting to \$796,632. This accommodated a business of \$8,264,035. The live-stock co-operatives undertake very little processing of their product. Their main activity is the assembling of live stock in cars at producing points for shipment to central markets.

* Statistics contained in this review are based on records received by the Economics Branch, Department of Agriculture, in 1936, covering the business year of 1935.

A large part of the fruit and vegetable crop is marketed through 107 co-operative agencies with a combined membership of 10,210 fruit growers. Assets for all companies total \$3,926,958; reserves and surplus amount to \$754,301. Sales of fruits and vegetables during the year amounted to \$7,424,400 which, together with supplies and other revenue, gave a total business of \$8,975,171.

Poultry producers have organized in each of the provinces to sell their products co-operatively. There were 31 associations with 254 places of business which reported a membership of 34,458 members. Assets amount to \$445,293 with reserves of \$198,644. Sales for the year amounted to \$2,161,647.

Practically all the wool marketed co-operatively in Canada is handled by the Canadian Co-operative Wool Growers Limited. The company operates in each province through the medium of 18 sheep-breeders' and wool-growers' associations. The co-operative stores, grades and markets the wool received from its 8,000 patrons. In addition, it carries on advertising and educational work and handles materials and supplies for its members. The quantity of wool handled by the co-operative during the year amounted to 4,500,000 pounds.

In Ontario and Quebec, the honey producers are organized co-operatively with a combined membership of approximately 1,800 members. Two tobacco co-operatives in Ontario, and three in the province of Quebec report a total membership of 953 and sales of approximately a half million dollars for 1935. The *Producteurs de Sucre et Sirop d'Erable de Québec*, with a membership of 1,982, is organized on a co-operative basis. During the year under review the sales value of maple products marketed by this association amounted to \$452,948.

For years the Canadian National Silver Fox Breeders' Association has been engaged in the inspection of silver foxes for registration and the marketing of silver fox pelts in all the provinces of Canada. Sales of silver fox and other furs by this Company amounted to one and one-quarter million dollars in 1934. Operating within the province of Nova Scotia, the Nova Scotia Silver Fox Breeders' Association grades, warehouses and markets fox pelts for its members in addition to carrying on valuable educational and field service work. Sales for the year under review amounted to approximately a quarter million dollars.

Available statistics show 378 associations are organized for the purpose of purchasing farm supplies and merchandise on the co-operative plan. These consumer associations, of which nearly one-half are established in the province of Saskatchewan, have a combined membership of 30,012. The sales value of supplies handled during the year, by associations organized exclusively for the handling of supplies, amounted to \$7,808,067. In five of the provinces co-operative wholesale buying societies purchase goods for their shareholder associations.

Within the miscellaneous group is included the Consumers' Refineries Co-operative Association Limited, Regina, Saskatchewan, which was incorporated in 1935 for the purpose of manufacturing petroleum products and selling them on a wholesale basis to local co-operative organizations throughout Saskatchewan. The co-operative completed its first year of operation successfully with sales amounting to approximately one-quarter million dollars.

For further information see Table 30, p. 771.

Section 12.—Labour Legislation in Canada in 1936.

A summary of the labour legislation in force in Canada at the end of the year 1928 was given in the Canada Year Book for 1929 at pp. 755-762, and each subsequent Year Book gives a summary of the labour laws passed in the year preceding its publication. Those for 1935 appearing at pp. 784-786 of the 1936 Year Book. Labour laws enacted during 1936 are contained in the Report on Labour Legislation in Canada, 1936, issued by the Department of Labour. The following is a *résumé* of the principal enactments.

Dominion Labour Legislation.—The National Employment Commission Act provides for a Commission of not more than seven members to carry out, in co-operation with provinces, municipalities, and public and private bodies, a national registration and classification of persons on relief, and to advise the Government on matters connected with unemployment and unemployment relief. Special committees on the employment of women and young persons were provided for, and the Act also makes provision for local advisory committees.

The Unemployment Relief and Assistance Act which is to remain in force until Mar. 31, 1937, gives authority to the Governor in Council to carry out such works as may be deemed in the general interest of Canada. Where the Dominion Government contributes to works under provincial jurisdiction, contracts must be approved by the Minister of Labour and the work supervised by an engineer in the service of the Dominion Government. The Act also provides for financial assistance to any province and empowers the Governor in Council to enter into agreements with the provinces respecting relief measures and to take other measures to encourage industrial expansion and to provide relief.

The Veterans' Assistance Commission Act provides for a Commission of three members under the Department of Pensions and National Health to ascertain the extent of unemployment among war veterans, and recommend methods of caring for them and of finding employment for those who are unemployed, particularly those who are handicapped.

Section 98 of the Criminal Code, dealing with unlawful associations, was repealed. Section 133 of the Code which deals with sedition was amended to provide that, without limiting the generality of the meaning of the expression "seditious intention", everyone is to be presumed to have a seditious intention who publishes or circulates any writing or printing in which is advocated, or who teaches or advocates, the use, without the authority of law, of force as a means of accomplishing any governmental change within Canada.

Provincial Legislation.—Legislative action was taken in British Columbia to deal with the problem of silicosis. The Metalliferous Mines Regulation Act was amended to require workmen employed in ore-crushing or rock-crushing operations, other than those in which the ore or rock is kept constantly moist, to be certified as free from disease of the respiratory organs. Silicosis occurring in these occupations or in other industries specified by the Workmen's Compensation Board, is made compensable under the Workmen's Compensation Act of British Columbia. Another addition made to the industrial diseases compensated in British Columbia is that of infected blisters due to employment in any process involving friction or vibration.

In Manitoba, the Workmen's Compensation Act was also amended to provide for compensation for silicosis occurring in mining and in iron, steel, and non-ferrous metal foundries.

In Quebec, an injured workman was given the right to choose his own physician and to take action at common law against any person other than his employer, even if compensation had been obtained under the Act. The Nova Scotia Act was amended as regards the liability of the principal when work is done by a contractor and sub-contractor.

In Alberta, the Workmen's Compensation Board was authorized to establish different assessment rates for different employments in the same class and to fix a special rate for an establishment in which the hazard is greater than the average.

Changes in the Ontario Factory, Shop and Office Building Act require employers in restaurants to keep registers of the women and young persons employed, and extend the section authorizing regulations for the protection of persons employed in processes involving the use of lead or benzol to include processes in which other dangerous or harmful substances are used. The sections governing home-workers were strengthened to require such workers and their employers to obtain permits, which may be issued only to employers who satisfy the inspector that they are likely to comply with the Minimum Wage Act and to workers who maintain proper sanitary conditions. Provision is made for inspection of employers' and workers' premises and of the registers of home-workers which employers are required to keep.

Sections relating to home-workers were added to the British Columbia Factories Act and are similar to the new Ontario provisions. Other changes in the British Columbia statute include slight changes in the list of holidays, provision for a short day on days other than Saturday, and for a minimum fine of \$50 and reduction of the maximum term of imprisonment from six months to three.

The Special Income Tax Act of Manitoba was amended to increase the amount of wages which entitled persons with dependants to exemption from payment of the two per cent tax. Exemption is now granted to a married person receiving 50 cents an hour, \$4 a day, \$100 a month or \$1,200 a year.

The Male Minimum Wage Act of Alberta, which is generally similar to that of British Columbia, applies to all adult male employees except farm labourers and domestic servants. The Act which was passed at the first session of the Legislature originally provided for its administration by a Minimum Wage Board authorized to fix minimum wages, with special provision for certain classes of employees including those who are handicapped and those who are under 21 years of age. At the second session of the Legislature the Act was amended to provide for its administration by the Board of Industrial Relations appointed under the Hours of Work Act passed during that session, and to permit the Board to fix overtime rates for time worked in excess of the maximum number of hours permitted by the Hours of Work Act.

The Minimum Wage Act of Saskatchewan was consolidated and amended. As before, the Act applies to female employees in shops and factories in cities, and the Board is empowered with the approval of the Lieutenant-Governor in Council, to extend its provisions to other parts of the province and to male employees in

establishments to which the Act applies. In October, 1936, an Order in Council was issued extending the provisions of the Act to cover male employees in shops and factories in cities. The new Act also provides for stricter inspection of the premises and records of an employer.

In British Columbia, the Male Minimum Wage Act and the Female Minimum Wage Act were amended to empower the Board of Industrial Relations to regulate "conditions of labour and employment" as defined in the Act.

An amendment in the Ontario Minimum Wage Act stipulates that, except as otherwise permitted by the Board, wages must be paid in full in cash or by cheque payable at par at the place where the work is performed by the employee. Any agreement between employer and employee to waive or forego any provisions of the Act or to refund any part of the wages paid is rendered invalid and the making of such an agreement is an offence by the employer. The Board may negotiate a settlement of a wage claim and if the employer fails to settle the claim, the Board may obtain an order for payment from a magistrate.

The New Brunswick Fair Wage Act provides for the appointment of a Fair Wage Officer to hear complaints and inquire into the wages, hours, and conditions of labour prevailing in any trade, industry, or business, and, where these are found to be inadequate or unfair, to call a conference of representatives of employers and workers in such trade, to be presided over by an independent person appointed by the Minister, for the purpose of effecting a voluntary adjustment. A report on the conference must be made to the Minister and may be referred by him to the Board of Commissioners of Public Utilities. Whether an investigation or a conference has been held or not, the Board may establish fair rates of wages and maximum hours for which such wages shall be paid and may fix rates for overtime. Different orders may be made for different establishments in the same trade and special rates fixed for part-time or handicapped workers or apprentices.

In Ontario, statutory provision was made for the first time for "fair wages" on public works. The Government Contracts Hours and Wages Act is generally similar to the Dominion Fair Wages and Hours of Labour Act of 1935. Persons employed on construction works undertaken by the Provincial Government, by contract, and on works towards which provincial aid is granted must be paid "fair wages" and have an 8-hour day and 44-hour week. The conditions do not apply to the purchase of materials or equipment for use in the work contemplated under a contract of sale and purchase. The Act is to be construed subject to the Industrial Standards Act, the Minimum Wage Act, and the Public and Other Works Wages Act.

The Industrial Standards Act of Nova Scotia is similar to the Industrial Standards Act, 1935, of Ontario but applies only to private building and construction in Halifax and Dartmouth. The Act enables the Minister of Labour, on petition of the employers or workers, to call a conference of employers and workers for the purpose of aiding them in negotiating an agreement as to wages and hours. The Lieutenant-Governor in Council may declare such an agreement to be binding on all persons engaged in the industry if, in the opinion of the Minister of Labour, it was arrived at by a proper and sufficient representation of employers and employees. The

Government may appoint inspectors to assist in enforcing the Act and agreements. A joint board to hear complaints and assist in enforcing the agreements may be set up by the parties to any agreement.

The Collective Labour Agreements Extension Act of Quebec was amended to enable several claims against the same employer to be joined in the same suit, and to bring persons violating the wage terms of an agreement under the penalty clauses of the Act. Another amendment was designed to make it clear that the Act applies to all persons employing workers in the building trades subject to the exemptions for workmen permanently employed in the maintenance of religious or charitable institutions or manufacturing establishments.

Amendments in the Industrial Standards Act of Ontario merely clarify the meaning of the Act as regards the scope of the agreements on wages and hours. Heavier penalties are provided for second or subsequent violations of the legal rates or hours. Power to set up a joint board to aid in enforcing a schedule of wages and hours is now vested in the Minister, and the Board is authorized to fix special rates for handicapped workers.

In Alberta and Nova Scotia provision was made for fixing hours of labour and wages of drivers of public service and commercial vehicles, but in Alberta the law will not come into force until proclaimed.

The Hours of Work Act of Alberta provides for an eight-hour day and forty-eight-hour week for female workers and for a nine-hour day and fifty-four-hour week for male workers and for a weekly rest day in any industry, trade or business except farming and domestic service. The Act, however, is not to affect the provisions of the Coal Mines Regulation Act. The Act is to be administered by the Board of Industrial Relations, consisting of not more than five persons. Provision is made for exemption from the daily and weekly limit of hours. Persons in supervisory, managerial or confidential positions are exempt. Provision for the application of the statute and for permanent and temporary exceptions are similar to those of the British Columbia Hours of Works Act and of the Eight-Hour Day Convention of the International Labour Conference. The Board may investigate conditions in any industry and prescribe that maximum hours for any employee shall be less than those fixed by the Act, determine rest periods and generally, make regulations regarding hours and conditions of work.

The Fire-Departments Hours of Labour Act of British Columbia was extended to apply to any place in which there is a paid fire department and to grant officers and other employees of fire departments two full days off duty each week in addition to the periods off duty under the Fire Departments Two-Platoon Act.

The One Day's Rest in Seven Act of Saskatchewan, applying only to cities, was amended to give statutory exemption only to persons employed solely as watchmen, janitors, or in managerial positions and to those not usually employed for more than five hours per day.

The Quebec Forest Operations Commission Act of 1934 was repealed. This Act required timber limit holders and contractors cutting timber on Crown lands to furnish certain information, including the wages of employees, the methods of

calculation and payment, deductions, fines, etc., prices charged for articles sold to employees, and for transportation, medical and other services, hours of labour, sanitary conditions, food, and work hazards. The above information was required to be posted at the camp and any employee paid lower wages than those reported might claim the difference in a civil action.

The Apprenticeship Acts of British Columbia and Ontario were amended to enable persons over 21 years of age to become apprentices. Another amendment to the Ontario Act authorizes the appointment of a provincial advisory committee for each designated trade or group of trades. With the approval of the Apprenticeship Board and the Government, a committee may make regulations as to the age and number of apprentices, length of apprenticeship and other matters affecting its relation to the trade. Such committees are to consist of five members representing equally employers and employees with an official of the Department of Labour. Provision is also made for the assessment of employees as well as employers in a trade in order to meet the costs of the apprenticeship scheme in that trade.

In Alberta, Manitoba and Saskatchewan, statutory provision was made for continued co-operation with the Dominion Government in dealing with unemployment. In the other provinces laws enacted for that purpose in previous years were still in effect.

The Bureau of Relief and Public Welfare Act of Alberta provides for a bureau under a Commissioner of Relief and Public Welfare, who is to make provision out of moneys voted by the Legislature for the maintenance of transient indigents and for their care and treatment in illness, to superintend the collection of statistics and information relating to indigency and relief and to supervise the administration of such Acts and relief measures as may be assigned to the Bureau. The Act also requires municipalities to provide relief for their residents, defines "residence", and enables a municipality providing relief for a resident of another municipality to claim reimbursement.

In British Columbia the Residence and Responsibility Act, which will come into force on proclamation, stipulates that where the authority of a local area is liable to provide relief, health and welfare services or to contribute to their cost, such assistance is to be given only to residents of the area and the responsibility of the local authority is limited by the Act. "Resident" is defined and provision made for the appointment of a Board of Arbitration to settle disputes. The Lieutenant-Governor in Council may make regulations to define more clearly the residence of any person and to discourage the undue removal of destitute persons from one area to another.

The Direct Relief Act of Saskatchewan enables a municipal council to grant relief to indigents, whether residents of the municipality or not, and to provide medical and hospital care for an indigent who is not a resident, defines "residence" for purposes of the Act, and provides that a municipality may recover sums expended for the relief of a resident of another municipality. The transportation of indigents from one municipality to another for the purpose of transferring the burden of relief is prohibited except at the request of the other municipality.

In Ontario the Unemployment Relief Act, 1935, was amended to authorize the Lieutenant-Governor in Council to make regulations for the establishment of a

system of registration with respect to employment in relation to unemployment and unemployment relief.

The Tradesmen's Qualification Act of Alberta may be applied by the Lieutenant-Governor in Council to certain specified trades, such as plumbing, electrical work, welding, trades engaged in the construction of automobile engines, boilers, radios, and refrigerators. The Act may be applied also to any trade in which 66 p.c. of the persons engaged have petitioned to have it so applied. The Lieutenant-Governor in Council may prohibit any person who does not hold a certificate of competency carrying on a trade to which the Act applies. Boards of examiners may be appointed and standards of proficiency prescribed in any such trade.

The Health Insurance Act of British Columbia provides for a compulsory scheme of health insurance to be administered by a Health Insurance Commission consisting of a Chairman, and not more than four members assisted by a Technical Advisory Council of not more than six persons. The Act applies to all employees earning \$1,800 per annum or less with the exception of farm workers. Certain classes of employees, including domestic servants and casual and part-time workers, may be exempted by the Lieutenant-Governor in Council on recommendation of the Commission. The Lieutenant-Governor in Council may also exempt members of an established industrial medical-service plan which assures its members and their dependants of a standard of service equal at least to the services of a physician and hospital care in all cases of ordinary illness. The Commission, with the approval of the Lieutenant-Governor in Council, may extend the provisions of the Act to persons earning between \$1,800 and \$3,000 per annum who, on Jan. 1, 1936, were members of an industrial medical-service plan which ceases to provide such service. Persons who are outside the scope of the compulsory scheme may become voluntary contributors. The scheme is to be financed by contributions from employers and employees, the former paying 2 p.c. of their wages and the latter 1 p.c. of their payroll for insured persons. The minimum weekly contribution is 20 cents for each insured employee from the employer and 35 cents from the employee, or such smaller sum as may be fixed by the Lieutenant-Governor in Council. The maximum is 35 cents for each insured employee from the employer and 70 cents from the employee. Special rates may be fixed for persons in seasonal or irregular employment, but the annual contributions in respect of such persons may not exceed \$18 from the employer and \$36 from the employee. Voluntary contributors bear the full cost of insurance for themselves and their dependants. Benefits include medical and surgical care, hospital maintenance in a public ward for a period not exceeding ten consecutive weeks for any one illness, and laboratory, X-ray and other services. Drugs, medicines, and dressings are also included, subject to the condition that the Commission may require a portion of the cost not exceeding one-half to be paid by the insured person.

The Mothers' Pensions Act of British Columbia was amended to permit the granting of an allowance to a mother who was formerly a British subject either by birth or naturalization and to provide for an additional payment of \$7.50 per month in cases where the husband of a mother is totally disabled and is living with her. The maximum assessed value of real property used as a home and owned by a mother eligible for an allowance was increased from \$2,000 to \$2,500.

An amendment in the Alberta Mothers' Allowances Act reduces the proportion of the allowance payable by the municipality from 50 to 25 p.c. A wife deserted, without reasonable cause, for five years or longer is made eligible for an allowance.

An amendment in the Department of Trade and Industry Act of Alberta, makes the Act applicable to producers and manufacturers as well as to wholesale dealers, and the clauses are repealed which provided that it should not apply to the retail sale of second-hand goods or goods advertised in a *bona fide* mail-order catalogue and sold in the course of a *bona fide* mail-order business. The Minister may now recommend to the Lieutenant-Governor in Council that a trade not covered by the statute shall be brought within its scope. The amendment stipulates that codes must be approved by a majority of persons engaged in the trade or by the persons owning over 50 p.c. of the aggregate capital invested. Formerly such codes had to be approved by 66 p.c. of the persons engaged, or by those owning 66 p.c. of the aggregate capital. Maximum as well as minimum prices for commodities may now be fixed. Provision is made also for the appointment of the Price Spreads Board of from three to five persons to inquire into the production, supply, distribution or sale of any goods or merchandise or to any trade or industry to which the Act applies. After such inquiry, the Board may fix maximum or minimum prices or both for the sale or purchase of such goods by wholesale and retail or for services or work done.

Section 13.—Legislation Respecting Combinations in Restraint of Trade.

A general article on Canadian legislation concerning trade combinations and monopolies against the public interest will be found at pp. 765-770 of the 1927-28 Year Book under the heading "Legislation Respecting Combinations in Restraint of Trade". The article outlines the provisions of the Combines Investigation Act and reviews the principal cases dealt with under the Act up to that time. A brief statement of the provisions against combines as contained in the Criminal Code, the Customs Tariff, the Excise Act and the Patent Act is included. A further section of the article summarizes former Canadian legislation for the investigation of combines, including the Combines Investigation Act of 1910 and the Combines and Fair Prices Act of 1919.

The Combines Investigation Act.—The Combines Investigation Act (R.S.C., 1927, c. 26) is designed, as its full title indicates, "to provide for the investigation of combines, monopolies, trusts and mergers", and declares to be unlawful only such combines as "have operated or are likely to operate to the detriment or against the interest of the public, whether consumers, producers or others". The penalty section of the statute provides that any person who is a party or privy to or knowingly assists in the formation or operation of a combine is guilty of an indictable offence and liable to a penalty not exceeding \$10,000 or to two years imprisonment, or, if a corporation, to a fine not exceeding \$25,000. Provision is also made in the Act for the reduction or removal of the customs duty on any article of commerce, among the manufacturers or dealers in which there exists a combine, the operation of which is facilitated by the tariff. Similarly, the Exchequer Court may revoke a patent if there is evidence to show that the holder of such patent has made use of his exclusive rights to limit production or competition unduly, to enhance prices unreasonably, or to restrain or injure trade.

Combines Legislation in 1936.—The administration of the Combines Investigation Act continued under the jurisdiction of the Dominion Trade and Industry Commission during 1936. The reference for determination of the consti-

tutional validity of the Act establishing this Commission was before the courts throughout the year.

In 1935 the Combines Investigation Act had been amended to provide that not only evidence given orally, but also any documents required to be produced in an investigation under the Act might not be used in subsequent criminal proceedings. During the session of 1936 a Bill was introduced to restore the Act in this particular to what it had been prior to the amendment of 1935. The Senate refused to accept the amendment and the Act remained without change. The Prime Minister expressed the intention of the Government to introduce in the session of 1937 a Bill amending the statute as proposed in the 1936 Bill and in other respects.

Combines Cases in 1935-36.—The Dominion Trade and Industry Commission, consisting of the three members of the Tariff Board, was charged with the administration of the Combines Investigation Act under the provisions of the Dominion Trade and Industry Commission Act, 1935, which came into effect on Oct. 1, 1935. On Nov. 5, 1935, the Commission Act was referred by Order in Council to the Supreme Court of Canada for decision as to its constitutional validity. In June, 1936, the Supreme Court pronounced the opinion that Section 14, dealing with price and production agreements, and Sections 19 and 20, concerning a "Canada Standard" trade mark, were unconstitutional. This decision was the subject of an appeal and cross-appeal to the Judicial Committee of the Privy Council. No decision had been delivered by the latter body at the close of 1936. As a result of these developments no extensive investigations were conducted under the Combines Investigation Act during the fiscal year 1935-36.

An investigation into the importation and distribution of anthracite coal in Canada, indicated in the Speech from the Throne at the opening of Parliament on Feb. 6, 1936, was conducted under the Inquiries Act. Dr. H. M. Tory was appointed as a Commissioner to conduct this investigation. Hearings were begun at Montreal on July 8, 1936, and public sessions were held at Montreal, Toronto, Quebec, Halifax, Saint John, and Ottawa. At the end of 1936 the investigation had not been completed.

Various preliminary inquiries were made, as in previous years, in connection with complaints relating to trade practices in particular industries, alleged to affect unfairly certain classes of persons and to be injurious to the public. For reasons already indicated this work was of a more limited nature in the latter part of the fiscal year.

Section 14.—Mothers' Allowances.

Six of the nine provinces of Canada provide for the payment of allowances to mothers who are widowed or without adequate means of support. The province of Manitoba was the first to make such provision in 1916, and the example has been followed by the other western provinces and by Ontario and Nova Scotia. The Mothers' Allowances Act, 1930, of New Brunswick has not been proclaimed in effect.

All the Mothers' Allowances Acts stipulate that the mother must be a resident of the province at the time of making application and a widow or, in all provinces but New Brunswick and Nova Scotia, a wife, whose husband is physically or mentally incapacitated. The section in the Alberta Act bringing the wife of a physically disabled man within its scope, has, however, not been proclaimed.

In Alberta, British Columbia, Ontario, and Saskatchewan, deserted wives are paid an allowance, and in British Columbia and Saskatchewan, the wives of inmates

of penal institutions are eligible. Under all the statutes except those of Alberta and Saskatchewan, the mother must be a British subject, or the widow or wife of a British subject. Allowances may be paid to a foster-mother under certain conditions in all the provinces but Alberta, Nova Scotia, and New Brunswick.

In New Brunswick and Nova Scotia, allowances are payable in respect of two or more dependent children, but an allowance is payable for one child under 16 if there is an invalid child over 16 years of age. In the other provinces, allowances are payable in respect of one or more dependent children, but in Manitoba, under the regulations, no allowance is payable in respect of an only child, or an only child under 15 years of age unless the mother is temporarily or permanently unable to care for the child. A dependent child is a child under 16 years of age in British Columbia, New Brunswick, Nova Scotia, Ontario, and Saskatchewan. In Alberta, a boy under 15 or a girl under 16 is deemed to be dependent. In Manitoba, only children under 15 are regarded as dependent unless they are invalids.

In Alberta, British Columbia, Manitoba, and Ontario, the cost of the allowances is divided between the province and the municipalities concerned. In Ontario, however, the Provincial Treasury bears the whole cost of allowances payable to persons resident in the provisional judicial districts (northern Ontario) of the province and not in cities. In Saskatchewan, New Brunswick, and Nova Scotia, the whole cost is carried by the province.

Rates of Allowances.—In British Columbia, the Act provides for a maximum monthly allowance of \$42.50 for a mother with one dependent child, an additional \$7.50 for each other child under 16 years of age, and a further \$7.50 in cases where the husband of the mother is totally disabled and is living with her. In New Brunswick and Nova Scotia, a maximum allowance of \$60 per month is fixed by statute. In the other provinces, the provincial authority administering the Act has power to fix the rate of the allowance. In Ontario, the maximum for a mother and one child is \$35 per month in a city, \$30 in a town of over 5,000 population and \$25 in a rural district, with an additional \$5 for every child in each case. In Saskatchewan, under the terms of an Order in Council of January, 1936, maximum monthly payments range from \$8 to a mother with one child to \$44 to a mother with ten or more children.

In Manitoba, the maximum allowance for a mother and two children is \$50, excluding allowance for winter fuel, with a maximum of \$89 for a family of seven or more children. In Alberta, the allowance is determined by the special circumstances in each case, the maximum payment ranging from \$25 per month to a mother with one child, to \$50 per month where there are five children.

Table 31 shows the number assisted and the expenditure on mothers' allowances in the provincial fiscal years ended 1935:—

31.—Mothers' Allowances in Canada, fiscal year 1934-35.

Province.	Number Assisted.		Benefits Paid.
	Families.	Children.	
	No.	No.	\$
Alberta (year ended Mar. 31).....	1,573	3,794	462,252

¹ Owing to change in fiscal year, figures are for fourteen months.

² Owing to change in fiscal year, figures are for five months only.

PART II.—WAGES AND COST OF LIVING.

Section 1.—Wage Rates.*

Statistics of rates of wages and hours of labour have been collected for recent years by the Dominion Department of Labour, and are published in a series of bulletins supplementary to the *Labour Gazette*. Report No. 1 of this series was issued in March, 1921. The records upon which the statistics are based begin in most cases with the year 1901. Index numbers have been calculated to show the general movement of wage rates; the series covers six groups of occupations back to 1901, and common factory labour, miscellaneous factory trades and lumbering back to 1911. The index numbers are based upon wage rates in 1913 as 100. Average index numbers, weighted according to the average numbers of employees in each group, as shown in the Censuses of 1921 and 1931, are also given. Weighting has not been applied within groups. In groups by occupations or industries such as these, weighting makes comparatively little difference as rates of wages for the various classes of labour tend to rise and fall to the same extent even in different localities. In the three groups, common factory labour, miscellaneous factory trades, and logging and sawmilling, the index numbers being calculated from samples, the averages are automatically weighted by the number of samples which vary according to the number of workers in the various occupations and industries. The upward movement which appeared in the index numbers for some groups in 1934 became general in 1935 and continued in 1936 except for steam railways.

*See pp. 774-783 of the 1927-28 Year Book for an article on the "Wages Statistics of the Census of 1921" and pp. 797-799 of the 1933 Year Book for "Earnings in the Census Year 1931".

1.—Index Numbers of Rates of Wages for Various Classes of Labour in Canada, 1913-36.

NOTE.—Rates of wages in 1913=100. Index numbers for 1901-12 were given at p. 674 of the 1932 Year Book.

¹ For statistics of the wages and hours of employees of steam railways and wages of employees in and about coal mines in Canada, see pp. 751-752 of the 1930 Year Book, where the rates, etc., for the past seven or eight years to 1929, are given. Wages in coal mines of Nova Scotia were reduced 10 p.c. in 1932, and in Drumheller, Alta., in 1933; in 1935 in both districts 5 p.c. was restored. On steam railways deductions of 10 p.c. were in effect during 1932, 1933, 1935 and 1936; 15 p.c. in 1934; running trades 20 p.c. for six months in 1933. In editions of the Year Book prior to 1933 a table showing the wages and hours of common labour in factories for certain cities was given in this section. The information for 1936 can be found at p. 54 of "Wages and Hours of Labour in Canada", published as a supplement to the *Labour Gazette* for January, 1937. For the five cities of Table 2 it is included under sub-heading 5 of the stub.

² Maximum rates based on length of service; Halifax rate for one-man cars; 5 cents extra for one-man car operators in Montreal, Toronto, and Winnipeg; Vancouver 6 cents extra.

³ Deduction of 5 p.c. 1932-34; 2½ p.c. in 1935; no deduction in 1936.

Section 2.—Wages and Hours of Labour under Provincial Minimum Wage Legislation.

All of the provinces in Canada except New Brunswick and Prince Edward Island have in effect legislation providing for minimum wages for female employees in certain industries and occupations through boards which establish and enforce the minimum rates, and there is also legislation for the restriction of hours of labour. (See Section 12 of Part I on Labour Legislation in 1936). In Nova Scotia the legislation is applicable to females only, but in the other provinces it applies to males in certain respects. In New Brunswick a statute was passed in 1930 to come into force on proclamation, but it has not yet been proclaimed. Hours of labour are regulated in some of the provinces by the minimum wage boards but in the others only under the factory acts, etc.

Minimum wage rates for males separately had been established prior to 1934 to a slight extent only in British Columbia since 1925 and in Manitoba since 1931, but in 1934 orders were issued or extended to apply to large numbers of male workers in these two provinces. Also in 1934 wage rates were established under the Collective Labour Agreements Extension Act in Quebec and under the Forestry Commission Acts in Quebec and New Brunswick. The Industrial Standard Acts of Ontario and Alberta in 1935, and that of Nova Scotia in 1936, provided for the establishment of wage scales in various industries for all employees. A supplement to the *Labour Gazette* for January, 1937, on Wages and Hours of Labour in Canada in 1929, 1935 and 1936 contains an appendix giving, in some detail, information as to hours and minimum wages for males as well as for females.

Information as to minimum wage rates for work under Dominion Government contracts for the manufacture and supply of equipment, stores, clothing, etc., appears in the paragraphs on Fair Wages in the section on the Dominion Department of Labour at pp. 734-735.

Subsection 1.—Minimum Wages for Females.

The accompanying table gives information as to minimum rates of wages and as to hours for which these rates are payable under the orders of the various provincial boards and commissions in effect at the end of 1936.

The information here given is intended to afford merely a statistical summary of the minimum wages with hours of labour in the provinces and industries affected, and while some of the more significant details have been given in footnotes, it has been found impossible to include the information in such form as to indicate any more than the general conditions under these provisions.

For complete information it is necessary to refer to the orders as issued by the various provincial boards. These have been given in some detail in the *Labour Gazette* from time to time as issued, and in summary form in the Wages and Hours Supplement to the *Labour Gazette*, January, 1937. In some provinces these orders include regulations as to employment conditions, sanitary conditions, etc. The boards have power to issue licences for lower rates of pay for handicapped workers and to meet special conditions in the nature of emergencies.

3.—Minimum Wage Rates for Female Workers in Canada Under

NOTE.—For further details regarding minimum wage rates for females, see pp. 94-104 of *Wages and*

¹ Rates apply to cities and incorporated towns.² Rates vary according to population and industry, the higher rates for Montreal and district.³ Rates vary according to locality and population.⁴ Rates apply generally throughout province, also to male workers in many cases and to boys under 18 in cities.⁵ Only in cities and within a radius of 5 miles; applies to males as well as females.⁶ Apply to centres with more than 600 population, and to Banff, Lake Louise, Waterton Lake Park and Jasper, except in case of "Fruit and vegetable canning, etc." (where rates given apply throughout the province), and except in case of telephone operators.⁷ Rates apply throughout the province. Provision made for washing, curing, packing, etc., (except canning) of fish as follows: experienced—\$15.50 per week (48 hours) or 32 7/24 cents per hour; minors, learners, etc.—\$12.75 to \$14.75 per week.⁸ In some industries, instead of a graduated scale according to experience, stipulated percentages of female workers in each establishment must receive the full minimum wage, while the remainder may work at lower minimum rates.⁹ Hourly rates are fixed for certain industries: adults, experienced—19 to 25 cents per hour, minors, learners, etc.—12½ to 19 cents.¹⁰ Includes departmental and chain stores, also wholesale establishments.¹¹ Hotels, per month with room and board. Restaurants: 17 and 15 cents per hour.¹² Custom millinery trades not in factories: minors, learners, etc.—\$5.00 to \$10.00.¹³ Shoe shine parlours in Toronto only, all including learners \$12.50 (under separate order).¹⁴ Or 25 to 30 cents per hour.¹⁵ Apply also to elevator operators including learners (under separate order).¹⁶ Apply also to departmental stores and mail-order houses (under separate order).¹⁷ Higher rate applies to Winnipeg and district, and Brandon at any time; to Portage la Prairie, May to October; and to any summer resort, June to September.

¹³ Ticket sellers and ushers, less than 40 hours a week—30 cents per hour. No minor to be employed.

¹⁹ Winnipeg, St. Boniface, and St. James only.

²⁰ Factory order includes garages and automobile service stations. Part time: adults—30 cents per hour; minors, learners, etc.—20 and 25 cents. See footnote 5.

²¹ Includes fur-sewing, dress-making, and millinery establishments.

²² Includes mail-order houses; exempts druggists, drug apprentices, foot or bicycle delivery boys.

²³ Or 25 cents per hour. Inexperienced adults—\$9-00 per week or 20 cents per hour. Order exempts bell boys, elevator operators and porters. Kitchen help—\$10-00 per week or 21 cents per hour.

²⁴ Millinery shops, \$4-00 to \$10-00 per week.

²⁵ Rates for a 7-day week as follows: experienced—\$14-50; apprentices—\$10-50 to \$13-00.

²⁶ Personal service order applies also to garages and operation of elevators, including male employees.

²⁷ Includes attendants in physicians' or dentists' offices, cash girls, telegraph operators and assistants in post offices.

²⁸ For week of 40 hours or more. Hourly rates are set for those working less: adults, experienced—35 cents with minimum of \$1-40 per day; minors, learners, etc.—20 to 30 cents with minimum of \$1-00 to \$1-25 per day.

²⁹ Order includes chambermaids in lodging houses and elevator operators. There is a separate order for janitresses in apartment houses.

³⁰ Personal service order includes attendants at garages and service stations, drivers of motor cars, etc., or all of whom (except those under 18) the rate is \$14-25 per week.

³¹ Ushers, including learners—\$14-25 for 36-48 hours per week, \$10-00 for 18-36 hours; for legal holidays and special matinees—30 cents per hour with minimum of 75 cents per day.

³² For week of 37½ hours or more. For less than 37½ hours: adults, experienced—40 cents per hour; minors, learners, etc.—30 to 37½ cents. A minimum of 4 hours pay in any one day.

³³ Order includes telegraph employees.

In the preceding table figures for adult learners and for minors and apprentices are shown in a range covering both classes. There is wide variation in the rates for such classes in the several industries and the time allowed for such periods varies considerably, from three months to three years. Probationary periods without pay are allowed in some cases—beauty parlours, millinery, dressmaking in shops, etc. The number of learners and apprentices is usually restricted to 25 p.c. of the employees. Where no rates for minors, learners, etc., are shown the rates for experienced adults apply.

Subsection 2.—Minimum Wages for Male Employees.

In Quebec, Ontario, Manitoba, Alberta and British Columbia, the minimum wage legislation provides that, in certain respects, men and boys may not be employed at rates lower than the minimum rates set for female employees. In Saskatchewan all orders of the Minimum Wage Board apply to male as well as female workers. Other provisions for minimum wage rates for male employees are outlined in the Wages and Hours Supplement to the *Labour Gazette*, January, 1937, pp. 126-147, a summary of which follows.

In New Brunswick, the Forest Operations Commission during 1936 established for stream-driving a minimum rate of \$2 per day and board net, or its equivalent in case of piece work. For booming and sorting a minimum rate of 20 cents an hour was set. For cutting, yarding and handling a minimum rate of \$27 and an average rate of \$31 per month and board net were fixed.

In Quebec, the Minister of Lands and Forests informed all timber limit holders that a minimum of \$40 per month with board must be paid on penalty of withdrawal of certain concessions.

In Manitoba, in any industry except farming, market gardening, or domestic service, no person over eighteen years of age may be paid less than \$12 per week of 48 hours or 25 cents per hour in any city, in certain suburban localities and in summer resorts, while in the rest of the province the minimum rate is \$10 per week of 48 hours or 21 cents per hour. For boys under eighteen in factories, garages, and retail stores the minimum rates are \$8 per week during the first six months, \$9 during the second six months and \$10 thereafter in Greater Winnipeg and Brandon. The same rates apply for boys in laundries, dyeing and cleaning establishments in Winnipeg and St. Boniface, also for boys in hotels and restaurants in certain localities and in summer resorts. For bell boys and messenger boys in drug stores the minimum rate is \$8 per week, with 15 cents per hour for part-time work for the latter. For apprentices the rates specified in the indenture must be approved by the Board. In manufacturing, repairing, etc., in department stores and in mail-order houses, the orders of the Board apply to males as well as females. The Taxicab Act establishes for Greater Winnipeg a minimum of \$15 per week or 35 cents per hour with a minimum of \$1.40 per day, hours not to exceed twelve per day, six days per week. The Highway Traffic Act sets minimum rates for drivers of public passenger vehicles at \$80 per month or \$20 per week, nine hours per day, six days per week. The Fair Wage Act provides for minimum wages and maximum hours on public works under contract, and also on private construction work as defined in the Act, under schedules approved by the Minister of Public Works.

In Saskatchewan, the Coal Mining Industry Act, 1935, and an amendment to the Public Services Vehicles Act in 1935 provide for the establishment of minimum wage rates but none had been set by the end of 1936.

In Alberta, a Male Minimum Wage Act was passed in 1936, but no orders had been issued by the end of the year. The Public Service Vehicles Act, 1936, provided for the minimum rate of \$15 per week of six days.

In British Columbia, under the Male Minimum Wage Act, 1934, applying to all occupations except farm labourers and domestic servants, orders have been issued as to the following: logging, sawmilling, shingle, and wood-working industries, baking, fruit and vegetable canning, preserving, etc., shipbuilding, construction, the carpentry trade in Victoria and vicinity, transportation other than rail, water, or air, wholesale and retail establishments, barbering (excluding beauty parlors), elevator operators, janitors, stationary steam engineers, and first-aid attendants. In many instances the minimum rates for unskilled labour are 35 cents per hour for males over 21 years of age, 25 cents for those between eighteen and twenty-one, with 20 cents per hour for those under eighteen. In logging and construction the rates per hour are five to ten cents higher.

Subsection 3.—Wages and Hours of Labour under Collective Agreements and Schedules of Wages and Hours Made Obligatory by Order in Council in Certain Provinces.

In Nova Scotia, under the Industrial Standards Act, 1936, minimum wage rates and standard hours have been fixed for bricklayers, carpenters, electrical workers, plumbers and steamfitters in Halifax and Dartmouth.

In Quebec, under the Collective Labour Agreements Extension Act, 1934, wages and hours in agreements between representatives of employers and workers have been extended and made compulsory for all employers in the trade or industry in the district affected as follows: for the whole province in certain manufacturing industries, *viz.*, boots and shoes, men's and boys' clothing (not work clothing), children's clothing, women's coats and suits, gloves, and furniture, also for granite and stone quarrying; in most of the districts throughout the province for building trades and hairdressing trades; in Quebec, Three Rivers, Sherbrooke, Montreal, Hull and the surrounding districts for bakeries; in Montreal and district for the fur industry, for women's and children's millinery, also for longshoremen (inland navigation); in Montreal, Quebec, and Chicoutimi districts for printing trades; in Montreal and Quebec for ornamental iron and bronze work.

In Ontario, under the Industrial Standards Act, 1935, wages and hours schedules have been made obligatory by Order in Council for the following industries: most of the building trades in Toronto, the principal building trades in Ottawa and Windsor, and certain building trades in Kingston, St. Catharines, Hamilton, Kitchener, Brantford, London, Port Arthur, and Fort William; bakeries in the counties of Waterloo, Wellington, Perth, and Huron and in Ottawa; breweries, furniture factories, men's and boys' clothing factories, women's cloak and suit factories, and millinery shops throughout the province; logging in the Port Arthur district; and also for barbers in Toronto and Windsor.

In Alberta, under the Industrial Standards Act, 1935, schedules have been put into effect by Order in Council as follows: for the baking trade at Calgary, Edmonton, and the adjacent territory; the brewing industry throughout the province; certain building trades at Calgary, Edmonton, Wetaskiwin, and the surrounding territories.

Section 3.—Cost of Living of Wage-Earners.

An index number of the cost of living in working-men's families has been computed by the Department of Labour since 1913, and is published monthly in the *Labour Gazette*. This index is specifically designed for the purpose of measuring the trends of the cost of living for certain wage-earning classes with a somewhat lower standard of living than that which is measured by the Bureau of Statistics index number of retail prices, shown on pp. 797-801 of the present volume. The former wage-earners index is used extensively in negotiations as to wage rates and in the settlement of industrial disputes. An abridgment of this index is presented in Table 4.

4.—Changes in the Cost of Living in Canada from 1914 to 1936.

¹ The figures for "All Items" were calculated by giving the following weights to each group: Food, 35 p.c.; Fuel, 8 p.c.; Rent, 18½ p.c.; Clothing, 18½ p.c.; Sundries, 20 p.c.

Section 4.—Earnings in the Census Year, 1931.

The total number of wage-earners in Canada reporting earnings for the census year ended June 1, 1931, was 2,476,414 or 96·35 p.c. of all wage-earners and the total amount of their earnings was \$2,100,552,700. Of this number 1,947,957 were males and their earnings amounted to \$1,804,942,500 or 85·93 p.c. of the total

earnings. Females reporting earnings numbered 528,457 and the total amount of their earnings was \$295,610,200 or 14.07 p.c. of total earnings. The total weeks worked by wage-earners reporting earnings was 104,624,422. The number of weeks worked by the males was 80,003,048 or 76.47 p.c. of the total for both sexes, and the total for the females was 24,621,374 weeks or 23.53 p.c. of the grand total. Table 5 shows total earnings and average earnings by wage-earners in Canada and each province, by sex, for 1931 compared with 1921 and 1911. Table 6, pp. 802-803 of the 1936 Year Book gives an extended analysis of wage-earners, by industrial groups, for 1931.

5.—Wage-Earners, Ten Years of Age or Over, by Sex, Showing Total and Average Earnings and Average Number of Weeks Employed During the Twelve Months Prior to the Dates of the Censuses, by Provinces, 1911-31.

NOTE.—At the 1911 Census only earnings and weeks employed during the 12 months prior to the date of the Census at chief occupation were compiled. In addition, the information for that year is for wage-earners, 15 years or over.

CHAPTER XX.—PRICES.*

For purposes of statistical analysis, commodity prices are usually divided into two principal groups, wholesale prices and retail prices. The term "wholesale" is not used literally, and included in this group primary producers', factory, and jobbers' quotations are often found, as well as actual wholesale prices. Markets in which this type of price is quoted are usually well organized, and frequently very sensitive. They are responsive to changing business and monetary conditions. Wholesale quotations are accordingly preferred, therefore, for sensitive index numbers of prices designed to reflect price reactions to business factors, and for more general index numbers to furnish a basis of measuring changes in the purchasing power of money. Although possessing admitted defects, general wholesale price index numbers are widely used for this latter purpose.

Retail prices represent more diffused markets, and are less sensitive. There is ordinarily a lag of several months between this type of quotation and its wholesale counterpart. Retail prices are important from a statistical point of view, however, because they indicate changes in living costs, and along with measurements of income, show fluctuations in the economic well-being of the community.

Section 1.—Wholesale Prices of Commodities.

Subsection 1.—Historical Review of Canadian Prices.

Annual average index numbers for every year since Confederation are given in Table 1. In that table will be noted the high prices of 1867, following the close of the American Civil War and the Austro-Prussian War of 1866, and the tendency

*Revised by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics. This Branch compiles and publishes statistics on: Prices (wholesale, retail, securities, bond yields, services, exchange, cost of living), Retail and Wholesale Trade, Foreign Capital Investments in Canada and Canadian Investments Abroad, Balance of International Payments, and other related subjects. For a complete list of the publications of this Branch, the reader is referred to Chapter XXIX, Section I, under "Internal Trade".

to declining prices in subsequent years. Prices went up again after the Franco-German War of 1871 and reached a high point in 1872 and 1873, but the crisis of the latter year resulted in a decline. A downward trend persisted fairly steadily throughout the 25 years from 1872 to 1897, when the gold supply of the world did not increase as rapidly as the supply of commodities. This gold shortage was accentuated by the demonetization of silver, which ceased to be legal tender and was reduced to the level of token money by most nations. Relief came through the discoveries of gold in the Rand mines and the application of the cyanide process to low-grade ores. The result was a rapidly increasing world production of gold from about 1890 to the outbreak of the Great War, with consequent rising general prices as the volume of the new gold became an appreciable part of the total stock. Thus prices increased from the low point of 75·6 in 1897 to 100 in 1913 and 102·3 in 1914. Afterwards, the Great War, both through the scarcity of commodities which it occasioned and the inflation of the currency which it produced, drove prices rapidly upward to a maximum of 243·5 in 1920, followed by a rapid drop to 152·0 in 1922. This was succeeded by a slight increase to 160·3 in 1925. The tendency from 1925 to 1929 was gradually downward, although the period was one of increasing prosperity.

Commencing in the autumn of 1929, a severe economic depression set in, which was accompanied by a drastic decline in wholesale prices. Its extent may be gauged from the drop of the wholesale price index from 153·7 in August, 1929, to 99·2 in February, 1933. A subsequent irregular rise carried this index upward to 111·6 in March, 1934, and until June, 1936, it varied little from that level. In the second half of 1936, however, a sharp rise in basic commodity markets, led by grains and non-ferrous metals, advanced the index to 124·5, a gain of almost 11 p.c. in seven months.

Subsection 2.—The Index Number on a Post-War Base (1926).

The official Canadian index numbers of wholesale prices, along with the other price indexes computed by the Dominion Bureau of Statistics, were revised in 1928, when the list of commodities included was increased from 236 to 502. The weighting system was extended to obtain a fairer distribution among sub-groups, and the base was shifted to the year 1926. By that time most of the leading countries of

the world had completed the first phase of post-war currency reorganization, and a reasonable degree of price stability seemed to have been established. Commodities and weights were again revised at the beginning of 1934, bringing the total number of price series in the index up to 567.

From 1926 to the latter part of 1929 a moderate decline occurred, but its effect upon the price structure was not great. Subsequent dislocation, however, was extremely serious, as may be observed from the following percentage declines of group prices between August, 1929, and February, 1933: Canadian farm products, 60·7 p.c.; raw and partly manufactured materials, 50·5 p.c.; fully and chiefly manufactured goods, 29·3 p.c.; and the average of all commodities at wholesale, 35·5 p.c. From March, 1933, to December, 1936, the movement of commodity prices has been irregularly upward, and the advance for primary products considerably more rapid than that for manufactured products. The following index numbers show the relationship between the average of all commodities and specified commodity groups for December, 1936: all commodities, 100·0; Canadian farm products, 103·4; raw and partly manufactured materials, 99·5; and fully and chiefly manufactured materials, 97·0. This represents material improvement over conditions existing at the nadir of the depression, and points to a substantial restoration of equilibrium between the major price groups.

2.—Weighted General Wholesale Price Index Numbers, by Months, 1927-36.

(1926=100.)

October.....	97·2	95·2	96·8	81·0	69·9	65·0	67·9	71·3	73·1	77·1
November.....	96·9	94·9	95·7	79·5	70·7	64·7	68·9	71·1	72·7	77·2
December.....	97·2	94·6	96·0	77·7	70·4	64·0	69·0	71·1	72·7	79·7
Yearly Averages.	97·7	96·4	95·6	86·6	72·1	66·7	67·1	71·6	72·1	74·6

The general level of wholesale prices in Canada advanced 9·6 p.c. during 1936. This was represented by a rise in the Dominion Bureau of Statistics wholesale price index number from 72·7 to 79·7, which compares with 63·5, the extreme low of the preceding decline reached in February, 1933. The December, 1936, wholesale price index was thus 25·5 p.c. above the depression nadir, and it is noteworthy that more than a third of subsequent recovery has come in the year just ended. Of even greater interest is the fact that the 1936 increase came almost entirely during the past six months after a period of two and one-half years of exceptional stability. The 1936 advance has been very unevenly distributed as may be observed from the following percentages of increase for different commodity groups: vegetable products 28·0; animal products 1·8; textiles 2·0; wood products 5·8; iron and its products 4·9; non-ferrous metals 17·8; non-metallic minerals 0·5; chemical products 1·9; and Canadian farm products 29·6.

3.—Annual Weighted Index Numbers of Wholesale Prices of Commodities (on the 1926 Base), by Groups (Chief Component Material Classification), 1913-36, with Monthly Figures for 1935-36.

NOTE.—Monthly figures for 1932 and 1933 will be found at p. 863 of the 1934-35 Year Book, for 1934 at p. 807 of the 1936 Year Book, and those for certain earlier years in the corresponding table of previous editions.

Section 2.—Retail Prices of Commodities.

Collection of data and calculation of index numbers of retail prices and the cost of living are carried out in co-operation by the Dominion Bureau of Statistics (Department of Trade and Commerce) and the Department of Labour. Resultant series of index numbers are computed from different points of view. The computations of the Labour Department are designed to show changes in the cost of living for workmen in cities. They are constructed from family budgets, principally a weekly family budget of staple foods, fuel, and rent published monthly in the

Labour Gazette since 1915 and annually since 1911; in addition, figures are included for clothing and sundry items and further data for fuel, light, and rent. The Labour Department aims, by this method, to have a basis for computation that can be readily applied to the data for any given locality or district at any time, or for any class of labour—for instance, coal miners, who usually do not live in cities. Index numbers of retail prices and costs of living issued by the Bureau are constructed from a more general point of view, having for their object the measurement of the general movement of such prices and costs in the Dominion as a whole, and being so calculated as to make comparisons possible with other general index numbers constructed on similar principles, for example, the index of wholesale prices. Calculated, as they are, on the aggregative principle, *i.e.*, the total consumption of each commodity, the Bureau's index numbers afford an excellent measurement of changes in the average cost of living in the Dominion as distinguished from that of any particular class or section.

In the Bureau's index, 1926 is taken as the base year and is represented by 100 to bring it into conformity with other series of index numbers shown in this chapter. A description of the system of weighting of individual items, sub-groups and groups, and of the method of construction of this index number was given at pp. 812-818 of the 1931 Year Book. The Labour Department uses 1913 as 100 for both cost of living and wages index numbers. As will be seen from Table 7, the general cost of living index moved up from 79.1 in 1935 to 80.6 in 1936, continuing the upward trend apparent after July 1933. Higher prices for foods, rentals, and clothing were chiefly responsible for the advance. Fuel declined from 86.8 to 86.6. The monthly index for living costs fluctuated during 1936 between 79.6 and 81.7. January and December group indexes were as follows: foods, 73.9 and 75.3; fuel, 87.2 and 86.7; rent, 82.6 and 84.9; clothing, 69.9 and 71.6; sundries, 91.9 and 92.3.

¹ Revisions in the method of computing the clothing index are responsible for minor changes in the clothing group index, and in the total index.

² Subject to revision.

³ Revised since the publication of the 1936 Year Book.

Table 9 shows the average prices of items included in the family budget in 1920, 1926, and in each of the years from 1928-36. These prices are weighted by the quantities used by the Department of Labour in computing their monthly family budget. Table 10 gives the group indexes by provinces. An examination of the tables reveals the course of the budget, consisting of food, fuel and lighting, and rent, over the period shown.

9.—Prices of a Family Budget of Staple Foods, Fuel and Lighting, and Rent, for Sixty Cities in Canada, 1920, 1926, and 1928-36.

Section 3.—Index Numbers of Security Prices.

Security prices have long been utilized in statistical measurements related to economic phenomena. They are extremely sensitive to changing business conditions, although this valuable characteristic is sometimes overshadowed by the fact that their movements may be greatly influenced by speculative interest very remotely associated with underlying economic conditions. Thus in 1928 and 1929, common stock prices advanced far beyond levels indicated by business profits and prospects.

The behaviour of Canadian common stock prices has been quite different from that of commodity prices since pre-war years. There was no advance in security markets during the Great War paralleling the pronounced inflation in commodity values. Between 1926 and 1929, however, when commodity prices were declining gradually, common stocks more than doubled in price. Both sets of prices recorded a sharp drop between 1929 and 1933, and both have shown recovery subsequently. This has been much more pronounced in the case of security prices.

Investors Index Numbers of Common Stocks.—Monthly figures for the investors index numbers of common stocks, computed by the Dominion Bureau of Statistics on the basis 1926=100, have been carried back to 1913. The index falls into two parts, *viz.*, the period subsequent to 1926 and the earlier period. For the period 1913 to 1926 those stocks were used which were included in the index number previously issued on the 1913 base, *viz.*, 31 industrials, 10 public utilities and 9 banks, or 50 stocks in all. In the subsequent period the list of stocks included in the monthly index numbers was revised at annual intervals and now contains 68 industrial, 19 domestic utilities and 9 bank stocks. Despite the difference in the number of stocks included, the trend of stock prices is adequately shown throughout the whole period. The larger number of stocks included in the revised index number, though adding little to the accuracy of the general index, gives more complete information regarding various groups of stocks traded on Canadian exchanges.

Security prices in nearly all fields registered sharp gains during 1936 despite corrective reactions in the spring months and again in November. The magnitude of net changes for the year in different sections of the market may be appreciated by reference to the following group percentages of increase: utility common stocks 25 p.c., and industrial common stocks 19 p.c. The marked improvement in utilities in contrast with their lethargic behaviour during the past few years was one of the outstanding developments of 1936. The Bureau's index of industrial common stocks advanced sharply from 178.2 to 200.0 in January and February, with the latter month witnessing the heaviest trading in recent years. A minor reaction in March was followed by a second one of more importance in April which marked the first serious set-back industrials had received since July, 1934. The end of this movement came in May when the industrial group index averaged 187.9. During June and July recovery was hesitant, but in the next three months prices mounted rapidly, this advance being comparable to the sharp rise in the final quarter of 1935. Unlike that movement, however, its 1936 counterpart received a serious set-back in the second and third weeks of November. The market immediately resumed its advance in December, showing much greater recuperative power than after the spring decline. The December average index of 212.8 compared with the high point for the year of 226.1, recorded for the second week of November.

Utility common stock prices followed the same general movements described above for industrials, except that the November reaction was slight and the December recovery relatively stronger. The utility index mounted from 50.1 for December, 1935, to 57.0 for February and then dropped back to 52.5 in May. Subsequent reactions were so small that each succeeding monthly index showed an increase, the final December number being 62.8. Were it not for the transportation sub-group, the December utility index would have been more than 20 points above its current level. This may be observed from the following utility sub-group indexes for December: transportation 34.6, telephone and telegraph 120.4, and power and traction 82.1.

11.—Investors Index Numbers of Common Stocks (on the 1926 Base), by Months, 1936.

NOTE.—Figures for 1933 and 1934 were published at pp. 874 and 875 of the 1934-35 Year Book, and for 1935 at p. 816 of the 1936 Year Book; those for earlier years may be found in the corresponding table of earlier editions.

Weighted Index Numbers of Mining Stocks.—A weighted index number of mining stocks is computed by the Dominion Bureau of Statistics on the basis 1926=100. Mines of a semi-industrial nature, such as International Nickel and Consolidated Mining and Smelting Company, do not appear here, but are included in the Bureau's investors index of common industrial and public utility stocks.

Gold stock price movements in 1936 appeared to anticipate those in other groups by several months. Thus their initial decline commenced late in January, while recovery was occurring during the April reaction in other sections. From July until late in October golds declined gradually, then turned upward and continued to gain throughout the precipitous drop in industrials during November. The peaks and troughs of the year were marked as follows: June and July 134.4, March 122.7, and October 126.4.

Base metals gained more consistently than any other group, rising from 214.8 in January to 241.1 for April. Then after a minor decline to 239.2, they advanced without interruption to 317.8 for December. Spectacular increases in base metal commodity prices, particularly in the final quarter, furnished considerable support for improvement in base metal stock prices. Gains of the latter, however, were approximately three times as great as those for commodity prices.

Section 4.—Prices of Services.

A study of the prices of services sheds considerable light on the cost of living, as such services are a considerable item in the average family budget. Information with regard to the trend of street-car fares, of rates for manufactured and natural fuel-gas, of domestic electric light rates and of telephone charges was published at pp. 801-804 of the 1927-28 Year Book. Later information shows that the prices of manufactured fuel-gas have shown a downward tendency, the Dominion index number for 1935 being 93.0, as compared with 100.0 in 1926. The index number of the price of natural fuel-gas also declined from 100.0 in 1926 to 92.5 in 1930, rose again to 94.3 in 1932, then declined to 93.2 in 1935.

On the other hand, telephone rates have shown a distinct increase, the Dominion index number of domestic telephone rates having risen from 100.0 in 1926 to 107.4 in 1933, 1934, and 1935. Again, the business telephone rate has risen from 100.0 in 1926 to 118.5 in 1933, 1934, and 1935.

Additional information and details by provinces regarding the prices of services will be found at pp. 133-143 of the Annual Report on Prices and Price Indexes, 1913-35, issued by the Dominion Bureau of Statistics.

Hospital Charges.—In view of discussions of the increased cost entailed by illness and hospital treatment, special investigations on hospital charges are now made annually and the results are given as Dominion averages in the following table. In general, this shows that hospital charges in 1930 were 94 p.c. above the 1913 level. From 1930 to 1935 rates gradually declined to less than 89 p.c. above those in 1913. Operating room charges have not increased at the same rate as room charges, being only 55 p.c. above those in 1913, while the latter averaged 90 p.c. higher. The cost of maintaining patients in hospitals declined more than 11 p.c. between 1930 and 1935.

The detailed results of this investigation, including the statistics by provinces, are to be found at pp. 134-137 of the Annual Report on Prices and Price Indexes, 1913-35, issued by the Dominion Bureau of Statistics.

¹ Revised since the publication of the 1936 Year Book.**Section 5.—Index Numbers of Bond Yields.***

Few economic statistics are of more significance than the net rates of return received on absolutely the safest securities, such as government bonds maturing on a fixed date. Interest rates naturally grade upward from the rates which the safest of possible borrowers has to pay, and from the fluctuations of that price an idea may be obtained as to the relation between the supply of, and the demand for, funds for investment.

The exceptional requirements of the war years turned the Dominion authorities to a field which had hitherto served mainly the needs of the provinces and municipalities. To the latter, therefore, it is necessary to go for earlier historical records of long-term bond yields in the internal market. Province of Ontario issues covering the years from 1900 to date are available in this field, and were utilized for the first long-term bond yield index constructed by the Bureau of Statistics. The relatively long period for which these records have been preserved makes this series of considerable value. Since the War, however, the growing importance of Dominion financing in the domestic market has made it advisable to supplement the Ontario series with the Dominion index of bond yields shown in Table 14. The following remarks pertain to the Ontario bond yield movements since 1900.

The gradual rise in yields during the years prior to 1913 reflected the demand for capital and the upward tendency in interest rates which prevailed throughout the Dominion during this period. The only serious disturbance affecting the Ontario index in these years was the financial crisis of 1907-8. Following its termination, the rise in yields continued and accelerated rapidly in the early war years.

* The index of Ontario long-term bond yields formerly shown may be found in the Bureau's monthly bulletin "Prices and Price Indexes", obtainable from the Dominion Statistician.

A temporary reaction in the latter part of 1916 and the winter of 1917 was attributed to a marked reduction in offerings of municipal bonds which coincided with greater demand from the United States for Canadian securities. With the entry of the United States into the War in April, 1917, however, the American market was occupied with its own financial requirements, and Canadian yields again rose abruptly until the latter part of 1918. Then, with the pressure of war financing removed, and a plentiful supply of funds available for the purchase of the limited number of new issues, prices of bonds rose for a time, and, correspondingly, yields declined. This situation was quickly changed by an abrupt fall in the sterling rate at Montreal during the latter half of 1919, causing British holders of Canadian bonds to offer them on the Canadian market in large quantities, and for a time a state approaching demoralization existed. The severity of this condition is indicated by the Ontario yield index, which reached an all-time high of 128.4 in December, 1920. This compared with the war-time high of 126.3 in June, 1918, when the burden of war financing reached its peak. The "thawing" of commercial loans and lower call money rates paved the way for a broader bond market in 1921, and yields fell steadily until 1928, when they were on approximately the same levels as in 1913. The speculative boom of 1929 carried money rates and bond yields upward again until the fall months of that year. A subsequent recession was interrupted by the financial crisis of 1931 and 1932, but after June, 1932, yields declined irregularly until the third quarter of 1936, when they were at the lowest level on record. Subsequent increases were of minor proportions.

Section 6.—Wholesale Price Index Numbers of Principal Imports and Exports.

For a country such as Canada, whose economy is vitally affected by foreign trade, the importance of statistics relating to all phases of international commerce is readily apparent. Prices of imports and exports, although of less general concern than aggregate values, are nevertheless significant, and the examination of price fluctuations must form a part of any complete analysis of trade statistics. If trade value figures decline, it is important to know whether this represents a contraction of markets or simply a reduction in prices with volume maintained at former levels. Indexes of both volume and price are necessary for a complete knowledge of such facts. They are also useful to determine the influence of tariff policy upon trade movements. It is likewise of considerable importance that repercussions of international price fluctuations upon domestic price levels may be observed, and measurements made of their effect.

The calendar year import and export valuation indexes formerly published have been replaced by a new and more comprehensive series of wholesale price index numbers for principal imports and exports. These are available from 1913 to the present time on the base 1926=100. They compare closely with the corresponding valuation indexes and have been constructed so as to be directly comparable with other wholesale price index numbers which the Bureau publishes. From 1934 onward, the new series is available upon a monthly basis.

CHAPTER XXI.—PUBLIC FINANCE.

The following treatment of public finance includes an outline of Dominion, provincial, and municipal finance in Canada, supported by the necessary detailed statistics, and closes with a brief discussion of the national wealth and national income of the Dominion as the basis of all public finance.

The great increase in Dominion expenditure since 1913 has been partly due to the Great War with the resulting burden of interest, pension charges, etc., and partly to railway expenditures and social services including, latterly, unemployment relief. Increases on a commensurate scale have also taken place during the same period in provincial and municipal expenditures. Thus, in their fiscal years ended 1934, the total ordinary expenditure of the nine Provincial Governments was \$217,701,776 as compared with \$53,826,219 in 1916, only 18 years before—an increase of almost 304 p.c. (The aggregate interest payments of Provincial Governments rose from \$7,817,844 in 1916 to \$67,184,943 in 1934.) Again, in recent years, between 1924 and 1934, the aggregate tax receipts of the municipalities of Ontario have increased from \$94,526,271 to \$117,892,884 (comparable figures are not available for earlier years)—an increase of nearly 25 p.c. In Quebec the ordinary receipts of municipalities increased from \$33,288,115 in 1915 to \$79,471,242 in 1933—an increase of 139 p.c.; the 1934 figure given in Table 31 is not comparable as explained in the footnote thereto. While taxation receipts in the Prairie Provinces and the Maritime Provinces, for those years for which comparable figures are available do not show an upward trend, except in the case of Nova Scotia, the figures cover relatively recent years in the majority of cases, and in the Prairie Provinces a larger proportion of tax levies has remained uncollected. In British Columbia the taxes collected by the municipalities totalled \$9,382,099 in 1917 and \$18,002,475 in 1934.

Public Debt of Canada.—The latest year for which a figure for the aggregate public debt of Canada can be given is 1935. The statement below is summarized from the statistics given in the respective Sections of this chapter, the guaranteed or indirect debt being shown separately. The figures with regard to provincial debt are for the respective fiscal years of the provinces ended in 1935, given on p. 853.

SUMMARY OF THE AGGREGATE PUBLIC DEBT OF CANADA (CIRCA) 1935.			
(Dominion, Provincial, and Municipal Debt.)			
NET DIRECT DEBT—		\$	\$
Net Debt of Dominion Government, Mar. 31, 1935.....	2,846,110,958

¹ Including bank advances re wheat marketing \$39,274,661, against which grain held and margin moneys amounted to \$36,896,440 leaving a net liability of \$2,378,221 at the valuation then made on the current prices for grains.

Section 1.—Dominion Public Finance.*

Historical Sketch.—Both under the French *régime* and in the earlier part of the British, the territorial or casual revenues of Canada, consisting of certain seigneurial dues and the proceeds of the sale of government timber and land, were reserved to the Crown, while the right of levying taxes and of regulating the trade and commerce of the colony was, after 1763, deemed to be vested in the British Parliament.

By the Quebec Act of 1774, certain duties on spirits and molasses were imposed, to be expended by the Crown in order to provide a revenue "towards defraying the expenses of the administration of justice and the support of the civil government of the province". A little later, in 1778, the British Government, by the Declaratory Act (18 Geo. III, c. 12), renounced forever the right of taxing the colonies to provide Imperial revenue, but maintained its claim to impose duties considered necessary for the regulation of trade, the proceeds to go towards defraying the expenditures of the colonial administration. After the Constitutional Act of 1791, the customs duties remained under the control of the Imperial Government, their revenue, as well as the territorial revenue above mentioned, coming in to the Executive Administration independently of the Legislative Assembly and thus making the Executive power largely independent of the Legislature. In case these revenues proved insufficient, recourse could generally be had to the grant made by the Imperial Government for the support of the army. As time went on, however, the Crown revenues became more and more inadequate to meet the increasing expenditure, while the wave of economy in the United Kingdom after 1815 made it impossible any longer to supplement these revenues from military sources. On the other hand, the purely provincial revenues collected under the authorization of the Provincial Legislature showed an increasing surplus. The power of the purse thus began to pass into the hands of the Legislatures; further, in 1831 the British Parliament passed an Act placing the customs duties at the disposal of the Legislatures.

Under the Act of Union, a consolidated revenue fund was established. All appropriation bills were required to originate in the Legislative Assembly, which was forbidden to pass any vote, resolution or bill involving the expenditure of public money unless the same had first been recommended by a written message of the Governor General. The British Government surrendered all control of the hereditary or casual revenues, which were thenceforth paid into the treasury of the province to be disposed of as its Legislature should direct.

At the interprovincial conference which took place prior to Confederation, it was decided that the new Dominion Government, which was to take over permanently, as its chief source of revenue, the customs and excise duties that had yielded the greater part of the revenues of the separate provinces (direct taxation being as unpopular in British North America as in other new countries), was also to assume the provincial debts and to provide out of Dominion revenues definite cash subsidies for the support of the Provincial Governments. (See Tables 15 and 16.) Until the Great War, which made other taxes necessary, the customs and excise revenue constituted the chief resource of the Dominion Government for general purposes—the Post Office revenue and the Government railway receipts, which are not taxes at all, being mainly or entirely absorbed by the expenses of administering these services. Indeed, for many years preceding the War, customs and

* This Section has been revised under the direction of Dr. W. C. Clark, Deputy Minister, Department of Finance, with the exception of those parts dealing with war tax revenue and inland revenue on pp. 828 to 833, which were revised by the Department of National Revenue.

excise duties, together with the revenue from the head tax on Chinese immigrants, were the only items of receipts which were classified as taxes by the Department of Finance. In the last pre-war fiscal year these two items aggregated \$126,143,275 out of total receipts on consolidated fund account amounting to \$163,174,395, the Post Office and Government railways furnishing between them \$26,348,847 of the remainder, offset, however, by expenditures on these two services amounting to \$27,757,196. Miscellaneous revenue, largely fees, amounted in that year to \$10,682,273—a comparatively small fraction of the total. As both customs and excise taxes were indirect, the average Canadian felt but little the pressure of taxation for Dominion purposes.

The War enormously increased the expenditure, and this increase had in the main to be met by loans. It is, however, a cardinal maxim of public finance that, where loans are contracted, sufficient new taxation should be imposed to meet the interest charge upon the loans and to provide a sinking fund for their ultimate extinction. This war taxation was begun in Canada within the first weeks of the War when, in the short war session of August, 1914, increases were made in the customs and excise duties on various commodities, including coffee, sugar, spirituous liquors, and tobacco. In 1915 special additional duties of 5 p.c. *ad valorem* were imposed on commodities imported under the British preferential tariff and 7½ p.c. *ad valorem* on commodities imported under the intermediate and general tariffs, certain commodities being excepted. New internal taxes were also imposed on bank circulation, on the income of trust and loan companies, on insurance in other than life and marine companies, on telegrams and cablegrams, railway tickets, sleeping-car berths, etc., also on cheques, postal notes, money orders, letters and post cards. In the following year, the business profits war tax (dropped in 1921)* was introduced, and in 1917 an income tax was imposed. In 1918 both of these taxes were increased and their application widened, and in 1919 the income tax was again increased, and still further augmented in 1920 by a surtax of 5 p.c. of the tax on incomes of \$5,000 and over; the sales tax was also introduced in that year. The cumulative result of these war taxes was that, in the fiscal year ended Mar. 31, 1921, customs duties were for the first time displaced from their position as the chief factor in Canadian revenue, the war taxes yielding \$168,385,327, as against the customs yield of \$163,266,804. This situation has remained true down to 1936 with the exception of the period between 1928 and 1931, when customs duties temporarily assumed their former position.

A more detailed sketch of the changes made in taxation from 1914 to 1926 will be found at pp. 755-759 of the 1926 Year Book, while similar information *re* tax changes in 1927 to 1929 was given at pp. 791-792 of the 1930 Year Book and at pp. 824-826 of the 1936 Year Book for the years 1930 to 1935.

Recent Modifications in the System of Taxation.—In 1936 important changes were made in various taxation rates. The ordinary rate of income tax on corporations was increased from 13½ p.c. to 15 p.c., and where returns are consolidated, the rate was increased from 15 p.c. to 17 p.c. No changes were made in the existing rates on individual incomes. In order to stimulate an expansion of mining activity, an exemption from corporate income tax was granted to any metalliferous mine coming into production between May 1, 1936, and Jan. 1, 1940, such exemption to apply to its income for the first three years following the commencement of production. A new category embracing non-resident-owned investment corporations was established with provision for a rate of half the normal rate of tax on corporations.

* Belated revenue from this tax has been collected in subsequent fiscal years down to 1933 (see Table 8, p. 829).

The rate of sales tax was increased from 6 p.c. to 8 p.c. Certain changes in the exemption list were made to eliminate double taxation on materials consumed in the process of manufacture commonly known as "consumable materials".

Changes were made in the schedule of excise taxes on automobiles with a limitation providing that the tax per automobile in no case shall exceed \$250.

The excise duty on Canadian brandy was reduced from \$4 to \$3 per gallon. The duty on spirits used in the manufacture of medicines, etc., was reduced from \$2.50 to \$1.50 per gallon.

The more important tariff changes were as follows: intermediate tariff on automobiles was fixed at $17\frac{1}{2}$ p.c. instead of former varying rates of $17\frac{1}{2}$, $22\frac{1}{2}$, and 30 p.c.; intermediate tariff on agricultural implements reduced from $12\frac{1}{2}$ to $7\frac{1}{2}$ p.c.; intermediate tariff on gasoline reduced from $2\frac{1}{2}$ cents to 1 cent per gallon.

Under the British preferential tariff the following were the more important changes: free listing of iron and steel machinery of a class or kind not made in Canada; the removal of existing specific duties on all yarns or fabrics wholly of cotton, and on yarns and fabrics of artificial silk; and a reduction in rate on all unenumerated commodities made of iron or steel.

Reductions under all tariffs applied to printing machinery and equipment, various requirements for public hospitals, and all articles imported for use of the blind.

An important change was the provision for allowing Canadians returning from abroad to import free of customs duties goods to the value of \$100, for their personal use. The following statement gives a summary of the present taxation system of the Dominion Government together with gross revenue collected under each division.

SUMMARY OF THE DOMINION GOVERNMENT TAX SYSTEM AS OF JULY, 1936,
TOGETHER WITH GROSS REVENUE COLLECTED UNDER EACH DIVISION.

NOTE.—Since the figures given here are gross amounts actually collected, they do not agree in every case with the adjusted amount appearing in the Public Accounts.

¹ Customs Act. Under the provisions of the Customs Act, regulations have been established by Order in Council authorizing the payment of a drawback of 99 p.c. of the duty paid on materials imported into Canada and used, wrought into, or attached to any articles manufactured or produced in Canada and exported. The Customs Tariff Act also contains a schedule of imported materials on which designated drawbacks may be granted. See Schedule B of the Customs Tariff. ² Certain goods are totally exempt from sales tax. ³ Incomes of \$1,000 in the cases of unmarried and \$2,000 in the cases of married persons plus exemptions for dependants are exempt. Additional income is taxed at a graduated rate varying from 3 p.c. to 56 p.c. according to the published schedule. ⁴ Interest payable to non-residents in Canadian funds only, except on bonds of, or guaranteed by, the Dominion of Canada. ⁵ When payable in foreign currency which is at a premium in excess of 5 p.c. in terms of Canadian funds. ⁶ Notes of the bank in circulation in any British colony or possession other than Canada are exempt in certain cases. ⁷ Except any letter or postcard entitled to the privilege of free transmission under the provisions of the Post Office Act. ⁸ The amount of this tax cannot be separated from general postal revenues. ⁹ This total includes \$700 collected on account of licence fees.

Subsection 1.—The Current Balance Sheet of the Dominion.

A summary review of the current financial situation of the Dominion as at Mar. 31, 1935 and 1936, is given in the balance sheet shown as Table 1. This shows the figures for gross debt on the above dates to have been \$3,205,956,369 and \$3,431,944,026, respectively, partly offset by active assets aggregating \$359,845,411 and \$425,843,509, leaving the figures for net debt at \$2,846,110,958 and \$3,006,100,517, respectively.* Non-active assets, including such public works as canals and railways, also loans to railways, amounted in the aggregate to \$1,803,304,906 and

* See Table 18, p. 839, for figures of net debt in these and earlier years.

\$1,811,918,015, leaving debit balances on Consolidated Fund Account on Mar. 31 of \$1,042,806,052 and \$1,194,182,502, respectively. The details of the various assets and liabilities are contained in the schedules accompanying the balance sheet and printed in the Public Accounts.

¹ Direct liabilities only. Indirect liabilities or guarantees given by the Dominion of Canada are listed in Table 24 on pp. 844-846.

Subsection 2.—Receipts and Disbursements.

The receipts of the Dominion Government on Consolidated Fund Account for the fiscal year ended Mar. 31, 1936, were \$372,222,206, an increase of \$13,747,446 as compared with the previous year; besides these, special receipts amounted to \$319,833 and other credits, including refunds to capital account and credits to non-active accounts, amounted to \$53,957—a total revenue of \$372,595,996. The regular expenditure on Consolidated Fund Account was \$372,539,149, while Special Expenditures amounted to \$102,047,285. Under the newly-established category of "Government-Owned Enterprises" (see explanation, p. 819), total disbursements amounted to \$50,940,401, under "Capital Account" to \$6,544,154, and under "Write

Down of Assets" to \$514,566. Thus total disbursements amounted to \$532,585,555. There was an increase of \$159,989,559 in the net debt (gross debt less active assets) during the year. (See Table 22 for interest-bearing debt.)

Detailed statistics of receipts and disbursements are contained in Tables 2 and 3. Tables 4 and 5 are historical tables giving the figures of the main items of Dominion receipts and expenditures since Confederation, while Table 6 shows the per capita receipts and expenditures for these years, calculated on census and estimated population. Per capita receipts and expenditures are given by principal items in Table 7.

Changes in the Public Accounts, 1936.—Several important changes were made under various headings in the Public Accounts for 1936. On the revenue side "War and Demobilization Receipts", previously carried as "Special Receipts", were transferred to Ordinary Account (Casual Revenue). On the expenditure side several recurring items were also transferred from "Special" to "Ordinary", as follows: Cost of loan flotations, representing flotation costs of new loans and annual charges for amortization of bond discount; the Government's annual contribution to the Superannuation Fund; the annual payment to maintain the reserve in the Government Annuities Fund; adjustment of war claims; and expenditures made under the Railway Grade Crossing Act. A new category has been established under the heading "Government-Owned Enterprises", to cover expenditures incurred by the Government on account of the Canadian National Railways, the Canadian National Steamships and various Harbour Commissions. Other major changes are establishment of a separate category for Write Down of Assets, and transference of payment of Old Age Pensions from the Department of Labour to the Department of Finance.

In Tables 2, 3, and 7 the new classification of items has been adopted for the 1936 figures, but no attempt has been made to adjust the figures in the previous four years to the new set-up. The result is that, although the figures for each year as given in the tables conform with the figures shown in the Public Accounts for that same year, because of the new set-up for 1936 the figures are not on a comparable basis throughout.

2.—Details of Revenue Receipts, fiscal years ended Mar. 31, 1932-36.

NOTE.—See text above re adjustment of 'stub' classification as compared with former editions of the Year Book.

Totals, Write-Down of Assets Charged to Consolidated Fund.....	—	—	—	—	514,566
Grand Totals, Expenditures.....	450,955,552	531,760,983	457,968,585	478,004,747	532,585,555

¹ Certain charges of management shown separately in former Year Books are not now separable and are included with "General Expenditures". ² See footnote 1 to Table 2. ³ Included in Ordinary Expenditures—Maritime Freight Rates Act, 1932, \$6,631,856; 1933, \$8,716,751. ⁴ Corresponding figures for operations in the years 1930 and 1931 were \$28,425,000 and \$52,256,000, respectively. The losses in 1930 and 1931 were financed by loans and/or guarantee of securities. Government loans of \$41,121,000 in respect of 1931 operations appear in the above statement under Loans and Advances, Non-Active, for the year 1933.

⁵ Canadian National Railways—Loans of 1931-32, \$41,121,216; sundry Harbour Commissions—Advances prior to 1932-33, \$21,817,023. ⁶ Items not segregated prior to 1936. ⁷ See under "Finance".

⁸ See "Pensions, war, military and civil" above.

4.—Principal Items of Dominion Expenditure, 1868-1936 (continued on pages 824-825).

NOTE.—From 1868 to 1906, inclusive, the fiscal years ended on June 30; after 1906, on Mar. 31.

¹ Expenditure (Collection of Revenue). After 1919 railway receipts were applied directly to railway expenditure; this accounts for the great decline in the figures in 1920 and subsequent years. ² The expenditures shown do not include moneys spent for Civil Government account and miscellaneous expenditures, and to this extent do not correspond with the Post Office figures shown in Table 3 for the years 1932-36.

³ Includes various non-enumerated items.

⁴ Nine months.

⁵ See footnote 1 to Table 2, p. 820.

¹ For detailed statements see Table 8, p. 829.² Includes various smaller items of revenue receipts.

for most earlier years and special receipts since 1921.

³ Nine months.⁴ Revised since the publication of the 1936 Year Book.

6.—Per Capita Figures of Taxation, Total Revenue Receipts, Expenditure on Consolidated Fund Account and Total Expenditure, 1868-1936.

NOTE.—The years marked with an asterisk (*) are those of the censuses, April 2, 1871; April 4, 1881; April 6, 1891; April 1, 1901; June 1, 1911, 1921 and 1931. For the intercensal years the populations are estimated as at June 1 (see p. 153 for estimates of population). The fiscal period of 1907 is nine months ended Mar. 31. See the tables on pp. 823-826 for the figures of revenue and expenditure on which this table is based.

of Table 3.

⁴ Less than one-half of one cent.

⁵ Old Age Pensions transferred to Finance

⁶ Includes Civil Pensions in 1936.

⁷ Includes Railway Grade Crossing Fund in 1936.

Subsection 3.—War Tax Revenue.

An account of the various war taxes imposed in 1915 and subsequently has already been given on p. 810 in the introduction to this Section. For convenience of reference, the amounts received from these taxes since the beginning are segregated and the totals paid into the Receiver General are given in Table 8. The taxes imposed on banks, trust and loan companies, and insurance companies are collected by the Department of Finance. The excise war taxes, the business profits

war tax and the income war tax are collected by the Department of National Revenue, formerly the Customs and Excise Department. The amounts of excise war taxes collected from different sources in the past six fiscal years are given in Table 9, while Table 10 contains the details by provinces for the latest year. (See also Tables 37 to 42 of this chapter.)

Subsection 4.—Inland Revenue.

Under the Inland Revenue Act (R.S.C., 1906, c. 5), the Department of Inland Revenue had the control and management of standard weights and measures and of the collection of excise duties, of stamp duties, internal taxes, bridge and ferry tolls and rents until 1918. It administered the statutes which dealt with the adulteration of food and other articles, electricity and gas inspection, patent medicines, petroleum, naphtha, and the analysis of fertilizers and feeding stuffs. This Department also established the food standards which were put into force by Orders in Council under the authority of Section 26 of the Adulteration Act. Later the administration of the Adulteration of Food and the Proprietary and Patent Medicine

Acts was transferred to the Department of Health, that of the Commercial Feeding Stuffs and Fertilizers Acts to the Department of Agriculture, and that of the Acts relating to weights and measures and the inspection of gas, electric light and water meters to the Department of Trade and Commerce. By Order in Council of May 18, 1918, the Departments of Customs and of Inland Revenue were combined as the Department of Customs and Inland Revenue, under one Minister of the Crown. On June 4, 1921, the Department of Customs and Inland Revenue was consolidated as the Department of Customs and Excise (11-12 George V, c. 26). As from April 1, 1927, the name of this Department, which collects the great bulk of the revenue of the Dominion, was changed to Department of National Revenue by authority of 17 Geo. V, c. 34. This Act provides for three chief departmental officers—the Commissioner of Customs, the Commissioner of Excise and the Commissioner of Income Tax, while an Assistant Commissioner of Customs may also be appointed.

In the fiscal year ended Mar. 31, 1936, the gross amount of customs duties collected by the Department was \$82,784,317, as compared with \$84,627,473 in 1935, \$73,154,472 in 1934, \$77,271,965 in 1933, \$113,997,851 in 1932, and \$149,250,992 in 1931. The total of excise duties and excise war taxes collected in the fiscal year ended Mar. 31, 1936, was \$161,830,681, as compared with \$158,576,297 in 1935, \$145,176,663 in 1934, \$123,478,841 in 1933, \$109,586,366 in 1932, and \$93,986,975 in 1931.* The total of income tax collected in the fiscal year ended Mar. 31, 1936, was \$82,709,803, as compared with \$66,808,066 in 1935. While the income tax and the business profits war tax (see Table 8) are collected by the Commissioner of Income Tax, the other main branches of inland revenue—the excise duties and excise war taxes—are collected by the Commissioner of Excise.

Canadian Excise Tariff.—The following is a statement of the Canadian excise tariff, as existing at Jan. 1, 1937:—

1. Spirits distilled in Canada, per proof gal..\$ 4.00	3. Beer or Malt Liquor—concluded.
Except Spirits as follows:—	(b) Imported (in addition to any of the duties otherwise imposed), per gal.....\$ 0.07
(a) Used in a bonded manufactory for medicines, extracts, etc., per proof gal.. 2.50	4. Malt:—
(b) Used in a bonded manufactory for perfumes, per proof gal..... 1.50	(a) Produced in Canada and screened, per lb..... 0.06
(c) Used in a bonded manufactory for vinegar, per proof gal..... 0.27	(b) Imported, per lb..... 0.06
(d) Used for chemical compositions approved by Governor in Council, per proof gal..... 0.15	(c) Imported, crushed or ground, per lb. 0.08
(e) Sold to licensed druggists for pharmaceutical preparations, per proof gal.. 2.50	5. Malt Syrup:—
(f) Distilled from native fruits and used by a licensed wine manufacturer for fortification of native wines, per proof gal..... 1.00	(a) Produced in Canada, per lb..... 0.10
2. Spirits imported (in addition to any of the duties otherwise imposed), per proof gal..... 0.30	(b) Imported, per lb..... 0.16
3. Beer or Malt Liquor:—	6. Tobacco, Cigars and Cigarettes:—
(a) Brewed in whole or part from any substance other than malt, per gal..... 0.22	(a) Manufactured tobacco, per lb..... 0.20
	(b) Cigarettes weighing not more than 3 lb. per M, per M..... 4.00
	(c) Cigarettes, weighing more than 3 lb. per M, per M..... 11.00
	(d) Imported leaf tobacco, unstemmed, per lb..... 0.40
	(e) Imported leaf tobacco, stemmed, per lb..... 0.60
	(f) Cigars, per M..... 3.00

A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities to universities, scientific or research laboratories, or to any *bona fide* public hospital for medicinal purposes only.

Revenue from Excise Duties.—The inland revenue collected from excise duties, other than war taxes, is shown by items for the past six fiscal years in Table 11.

* Table 9, p. 829, gives the details of the revenues from individual taxes for the years 1931-36 and Table 10, p. 830, gives this information by provinces for 1936.

Tobacco, including cigarettes, is shown by the figures to have supplied about 63 p.c. of the revenue from excise duties in the fiscal year 1936.

11.—Details of Excise Duties Collected, fiscal years ended Mar. 31, 1931-36.

(As shown in the Report of the Commissioner of Excise.)

Duty Collected Ex-manufactory on Deficiencies and Assessment—						
Amount..... proof gal.	965	9,643	575	297	80	664
Duty..... \$	8,677	87,061	5,187	2,076	559	2,655
Totals, duties collected plus licence fees..... \$	14,802	94,186	11,437	7,826	5,559	7,405

It will be seen from the above table that the quantity of spirits manufactured dropped between 1931 and 1933 from 9,286,780 proof gallons to 4,345,834 proof gallons. Since 1933 there has been an increase to 6,553,190 proof gallons for 1936. The duties collected ex-manufactory on deficiencies etc., plus licence fees fell from \$14,802 to \$5,559 between 1931 and 1935 but show an improvement at \$7,405 for 1936.

Alcohol and Tobacco Taken out of Bond.—In Table 13 are shown the quantities of spirits, malt liquor, malt, cigars, cigarettes, and tobacco taken out of bond for consumption in the fiscal years ended 1911 to 1936.

Between 1920 and 1936 the number of cigars taken out of bond fell from 270,089,761 to 124,570,870 and the quantity of tobacco, which was 23,049,012 lb. in 1920, had fallen to 20,870,651 lb. by 1925, since when there was a steady increase

to 23,113,501 lb. in 1936. The consumption of cigarettes increased from 2,440,982,912 in 1920 to 5,082,314,590 in 1931 but declined to 4,401,628,765 in 1932, and 3,728,832,089 in 1933, rising again to 4,342,728,835 in 1934, 4,958,250,855 in 1935, and 5,310,132,016 in 1936.

Between 1923 and 1929 spirits taken out of bond (exclusive of imported spirits) rose from 729,678 gal. to 2,016,802 gal., but there was a decided and steady drop to 769,527 gal. for 1933. Since 1933 fairly substantial increases have been shown. Malt liquor showed an increase from 36,789,195 gal. in 1923 to 65,719,129 gal. in 1929 but there was a decrease to 40,105,883 for 1934; the figure for 1936 was 56,913,069 gal.

13.—Quantities of Spirits, Malt Liquor, Malt and Tobacco Taken out of Bond for Consumption, fiscal years ended Mar. 31, 1911-36.

(For years prior to 1900 see 1916-17 Year Book, p. 528, and for 1901-10 see 1933 Year Book, p. 840.)

² Including snuff.

Subsection 5.—Subsidies and Loans to Provinces.

Subsidies.—By the provisions of the British North America Act and subsequent arrangements entered into from time to time, the Dominion is required to make certain annual payments to the individual provinces. These payments fall into the following classes:—

Interest on Debt Allowances.—By the terms of the Union of the provinces at Confederation in 1867, the Dominion assumed all the outstanding debts and liabilities of the provinces and undertook to pay, except in the case of Ontario and Quebec, interest at 5 p.c. on the amounts by which the actual per capita indebtedness

of the provinces fell short of a basic debt allowance calculated at approximately \$25 per capita. On the subsequent entry of additional provinces into Confederation, similar arrangements were effected regarding the assumption of their pre-Confederation indebtedness. From time to time, adjustments have been made in the basis of calculation of the debt allowances of the various provinces and the Dominion pays interest at 5 p.c. per annum on the amounts by which the actual debts of the provinces, on their entry into Confederation, fell short of the allowed debts as adjusted. The aggregate annual payment from the Dominion to the provinces in respect of interest on debt allowances is \$1,609,386.

Allowances for Government and Legislature.—Under the terms of the Union, annual grants of specific amounts were made to the various provinces for the support of their governments and legislatures. These fixed amounts vary with the population of the provinces according to the following scale, approved in 1907:—

Where population is—		\$
Under 150,000.....		100,000
150,000, but does not exceed 200,000.....		150,000
200,000, " " 400,000.....		180,000
400,000, " " 800,000.....		190,000
800,000, " " 1,500,000.....		220,000
Over 1,500,000.....		240,000

The aggregate annual allowances presently paid under this head amount to \$1,750,000.

Allowances per Head of Population.—Under the British North America Act of 1867, a grant of 80 cents per head of the population was allowed to each province. The British North America Act of 1907 provided that the grant would be paid to each province at the rate of 80 cents per head up to a population of 2,500,000, and at the rate of 60 cents per head for so much of the population as exceeds that number. The cost to the Dominion in 1936 of the annual allowances paid to the provinces per head of population was \$8,128,688.

Special Grants.—In the case of certain of the provinces, grants have been added to the original scale of subsidies in view of special circumstances obtaining, which, for the fiscal year 1936, amounted in aggregate to \$2,280,880 as set forth below:—

Prince Edward Island.—A special grant of \$195,000, less a deduction of \$39,120 (net grant of \$155,880).

New Brunswick.—An annual grant of \$150,000 since 1875 in consideration of the repeal of lumber duties reserved to the provinces by the B.N.A. Act of 1867.

Manitoba.—A special grant on the basis of population amounting at present to \$562,500 per annum.

Saskatchewan and Alberta.—Currently receiving an annual sum as compensation for loss of revenue derivable from their Public Lands, based on their respective populations which amounts, in the case of Saskatchewan, to \$750,000 per annum at present, and, in the case of Alberta, to \$562,500.

British Columbia.—A special grant amounting at present to \$100,000 per annum.

Other Special Grants.—In addition to the above, there are other special grants paid to the Maritime Provinces and British Columbia which are voted annually, aggregating, in the fiscal year 1936, \$3,975,000 as follows:—

Prince Edward Island.....	\$ 275,000
Nova Scotia.....	1,300,000
New Brunswick.....	900,000

¹ Special grants, pending reconsideration of provincial subsidies, are granted to Prince Edward Island, Nova Scotia, New Brunswick, and British Columbia. For the fiscal year ended Mar. 31, 1936, these grants were as follows: Prince Edward Island \$275,000, Nova Scotia \$1,300,000, New Brunswick \$900,000, British Columbia \$1,500,000 (not included in above table). ² \$4,822,842 of this amount was on account of readjustment of subsidy in lieu of Public Lands from 1870 to 1908, as provided for in the Manitoba Natural Resources Act, 1930.

15.—Total of Subsidy Allowances to Provincial Governments, from July 1, 1867 to Mar. 31, 1936.

¹ Compensation for lands and allowances for buildings. ² Allowances in lieu of debt. ³ Does not include special grants paid to Maritime Provinces and British Columbia, pending reconsideration of provincial subsidies.

Loans to Provinces.—All of the provincial loans recently advanced by the Dominion have been made to the western provinces under the authority of relief legislation beginning with the Unemployment and Farm Relief Act, 1931, and these have been secured by interest-bearing treasury bills of the respective provinces, the rate being 3 p.c. since July 1, 1936. The sum total of such loans outstanding as at Mar. 31, 1937, was \$131,989,641.

In addition to these, however, there were also outstanding at that date \$4,730,388 of housing loans, being the balance of loans made to the provinces in the years following the Great War, on the authority of Orders in Council passed in 1918 and 1919, and of the Appropriation Acts of 1920 and 1921. Upon these loans the province of Ontario repaid the whole of the advances in 1928, and the other provinces concerned have in most cases reduced their indebtedness from year to year.

Table 16 gives details of the loans made by the Dominion Government to the provinces concerned on account of relief expenditures, and Table 17 shows the amounts outstanding as at Mar. 31, of each of the years 1920-37, on account of loans made for housing.

Subsection 6.—The National Debt.

The gross national debt of Canada on Mar. 31, 1914, was \$544,391,369, as against assets of \$208,394,519, leaving a net debt of \$335,996,850. Comparatively small as was this debt, it was a debt incurred almost altogether either for public works of general utility which, like the Interecolonial and transcontinental railways and the canal system, remained assets, though perhaps not realizable assets of the nation, or was expended as subsidies to enterprises, which, like the Canadian Pacific Railway, though not government-owned, assisted greatly in extending the area of settlement as well as the productive and, therefore, the taxable capacity of the country. Broadly speaking, it was a debt incurred for productive purposes. Also, it was mainly held outside the country, the principal of the Dominion funded debt payable in London being \$302,842,485 on Mar. 31, 1914, as against only \$717,453 payable in Canada.

The great changes brought about in our national debt during the 21 years from 1914 to 1936 have been: (1) the enormous increase in net debt from \$335,996,850 to \$3,006,100,517; (2) the gross debt, having been largely incurred for war purposes is not represented by corresponding assets; (3) the debt is now mainly held in Canada, \$2,401,659,735 being payable in Canada at Mar. 31, 1936.

Recent Funded Debt Operations.—Conversions and other national debt operations carried out between 1931 and 1934 are dealt with at pp. 905-907 of the 1934-35 Year Book, those of the fiscal year 1935 on pp. 845-846 of the 1936 Year Book, and those between 1914 and 1930 at pp. 842-843 of the 1933 Year Book. The following review carries the summary down to Mar. 31, 1937.

On June 3, 1936, an issue of \$134,703,000 was floated in Canada, principally for the purpose of conversion, only \$20,000,000 being issued for cash. The balance was made up of conversions of 1½ p.c. bonds due Sept. 15, 1936, 2 p.c. bonds due Oct. 15, 1936, and 5 p.c. bonds due Nov. 15, 1936. The new issue was comprised of two maturities, 1½ p.c. four-year bonds yielding 1.63 p.c., and 3¼ p.c. thirty-year bonds yielding 3.30 p.c. Cash subscriptions were accepted only in respect to the latter maturity.

On Sept. 10, 1936, another major issue of \$100,000,000 was sold in the Canadian market in two maturities, as follows: \$45,000,000 in 1 p.c. four and one-half year notes sold to yield 1.40 p.c., and \$55,000,000 in 3 p.c. perpetual bonds (callable in 30 years) sold to yield 3.11 p.c.

The third major issue of the last fiscal year was offered in the New York market on Jan. 21, 1937. This issue, amounting to \$85,000,000 in two maturities, \$30,000,000 2¼ p.c. seven-year bonds sold to the public at 99½ to yield 2.39 p.c., and \$55,000,000 3 p.c. thirty-year bonds sold to the public at 98 to yield approximately 3.10 p.c., was for the purpose of providing the bulk of the funds needed for redemption of \$89,787,000 5 p.c. War Loan Bonds maturing Mar. 1, 1937, payable in Canada and New York, it being the belief that the major portion of this issue was held in the United States. The remainder of the funds necessary to pay off the maturing issue were provided directly from the Dominion Treasury. The \$33,293,000 5 p.c. school land debentures due July 1, 1936, and held by the provinces of Manitoba,

Saskatchewan, and Alberta, were renewed for a further period of one year at an interest rate of 4 p.c.

In the past three years a market for short-term treasury bills has been built up in Canada which has proven highly satisfactory. Each issue has, with two exceptions (where the bills were sold direct to the Bank of Canada), been offered for public tender. Starting with the first issue of Mar. 1, 1934, when 3-month bills were sold at an average interest cost of 2.85 p.c., the price gradually rose till the issue of Sept. 15, 1936, which showed an average interest cost of only 0.643 p.c., the lowest point during the three-year period. Following is a complete list of treasury bills sold by this method:—

TREASURY BILLS SOLD IN CANADA, MAR. 1, 1934, TO FEB. 15, 1937.

Statistics of National Debt.—Summary statistics of the national debt of Canada as at Confederation, and at the end of each fiscal year thereafter down to 1936, are given in Table 18, while details of the active assets and of the gross liabilities as at the end of the past twelve fiscal years are given in Tables 19 and 20, respectively. Further, details of the funded debt, showing the various issues of bonds, the annual interest charges and the place at which principal and interest are payable, are given as at Mar. 31, 1936, in Table 21. From this it appears that the total payable in London at that date was \$409,867,597, in New York \$364,000,000, in Canada \$2,401,659,735, and in Canada and New York \$89,787,000. Thus three-quarters of the funded debt of the Dominion was payable within the Dominion itself, and as a consequence the interest payable outside of Canada was a comparatively small item.

18.—Summary of the Public Debt of Canada and Interest Payments Thereon,
July 1, 1867, to Mar. 31, 1936.

Fiscal Yr.	Gross Debt.	Total Assets.	Net Debt.	Net Debt Per Capita. ¹	Increase or Decrease of Debt during the Year. ¹	Interest Paid on Debt.	Interest Received from Active Assets.	Interest Paid Per Capita. ¹

The Interest-Bearing Debt of Canada.—Something of the extent of the burden of national debt being carried by the Canadian people may be realized from the fact that, for the fiscal year ended Mar. 31, 1936, the interest charges on the total interest-bearing debt amounted to about 43 p.c. of the total receipts from taxation and over 36 p.c. of the receipts from all sources.

Before the Great War, interest rates were comparatively moderate, but the unprecedented expenditure of the world's capital in that gigantic struggle led, in all the participating countries, to the raising of enormous loans at comparatively high rates of interest, which in many cases still have to be paid until refunding becomes possible under the terms of the contracts made between the nations and their creditors. Thus, in Canada, the average rate of interest paid upon the direct interest-bearing obligations of the nation, which was only 3.368 p.c. at Mar. 31, 1913, rose to 5.164 p.c. at Mar. 31, 1922, and fell gradually to 3.937 p.c. at Mar. 31, 1936. Details of the interest-bearing debt of Canada, and the interest charges thereon, as at Mar. 31 of the years from 1913 to 1936 are given in Table 22.

22.—The Interest-Bearing Debt, the Annual Interest Charge Thereon and the Average Rate of Interest, as at Mar. 31, 1913-36.

Fiscal Year.	Bonds, Debentures and Treasury Bills.	Annual Interest Charges on Bonds, Debentures and Treasury Bills.	Average Interest Rate on Bonds, Debentures and Treasury Bills.	Savings Bank Deposits, Trust and Other Funds.	Annual Interest on Savings Bank Deposits and Other Funds.	Total Interest-Bearing Debt. ¹	Annual Interest Charge.	Average Rate of Interest.

¹ The total of interest-bearing debt, as here given, includes bonds purchased and held by the Treasury for sinking funds.

² In 1936 an amount of \$11,827, being compensation to seigneurs, previously included under Savings Bank Deposits, Trust and Other Funds, was transferred to Bonds, Debentures and Treasury Bills.

Guaranteed Debt of the Dominion.—Besides the direct debt of the Dominion, already dealt with, there are also large indirect obligations, arising mainly out of the guarantee of securities, by the Dominion, of the railway lines which now form the Canadian National Railways, and the subsequent extensions thereof. Together with these are other smaller indirect obligations, originating in the Government's guarantees of the bonds of the Canadian National Steamship services and of the bonds of its Harbour Commissions, issued in the main for harbour improvements. Since 1932 guarantees of certain bank loans have been made under the various Relief Acts. With the commencement of business of the Bank of Canada on Mar. 11, 1935, the guarantee, authorized by Section 27 (6) of the Bank of Canada Act, of the

deposit required to be maintained by every chartered bank in the Bank of Canada, came into force. This guarantee will require to be implemented "in the event of the property and assets of the Bank being insufficient to pay its liabilities, and if the Bank suspends payment of any of its liabilities". Statistics showing the growth of these indirect obligations since 1914 are given in Table 23, while Table 24 shows the obligations as they existed on Mar. 31, 1936.

Section 2.—Provincial Public Finance.*

Provincial Governments in Canada are in the position, under Section 118 of the British North America Act, 1867 (30 and 31 Vict., c. 3), and the British North America Act, 1907 (7 Edw. VII, c. 11), of having a considerable assured income in subsidies from the Dominion Treasury. Details of these payments are given for recent years at pp. 833 to 835 of this chapter. In addition, through their retention of ownership of their lands, minerals and other natural resources, those provinces which, by the voluntary action of their previously existing governments entered Confederation, raise considerable revenues through land sales, sales of timber, mining royalties, leases of water powers, etc., while the Prairie Provinces, though having controlled their own natural resources since 1930, formerly received from the Dominion special grants in lieu of land revenues. Further, under Section 92 of the British North America Act, Provincial Legislatures are given authority to impose direct taxation within the province for provincial purposes and to borrow money on the sole credit of the province.

Prior to the opening of the present century, provincial receipts and expenditures were generally moderate, as may be seen, both for individual provinces and for the provinces collectively, from Tables 25 and 26. The demand, more especially in Ontario and the West, for increased services from governments, particularly in respect of education, sanitation, and public ownership and operation of public utilities, and the performance of these functions, necessitated increased revenues, which had in the main to be raised by taxation. Among the chief methods of taxation to be employed has been the taxation of corporations and estates, succession duties showing a considerably increased yield even within the comparatively short period of eighteen years from 1916 to 1934 covered by the statements compiled by the Finance Branch of the Bureau of Statistics.† The fact that provincial govern-

*Revised by Col. J. R. Munro, Chief of the Finance Branch of the Dominion Bureau of Statistics. This Branch issues detailed statements on Provincial Finance which may be obtained from the Dominion Statistician. For a list of these publications see Section 1 of Chapter XXIX.

† The succession duties collected by the provinces in 1934 amounted in the aggregate to \$11,019,033, as compared with \$1,020,972 as recently as 1904, or an increase of more than 12-fold in 29 years. The aggregate revenue raised by taxation of corporations, land, income and miscellaneous (exclusive of gasoline taxes, succession duties and amusement taxes), increased from \$7,217,548 in 1916 to \$33,618,772 in 1934, an increase of 365 p.c. in 18 years.

ment is cheaper per head in the eastern provinces is evident from Table 26, which gives the per capita ordinary revenue and expenditure for various fiscal years from 1871 to 1934. This, however, is not to be taken as evidence that the larger services rendered to the public in the provinces west of the Ottawa river, are not worth what is being paid for them.

For the half-century subsequent to Confederation, the provincial accounts, published by each Government according to its own system of accounting, were quite incomparable as among the provinces, a fact much regretted by students of provincial public finance. Upon the creation of the Dominion Bureau of Statistics in 1918, its Finance Branch undertook the work of placing the various provincial public accounts on a comparable basis, correlating, for example, the revenue derived from succession duties, taxation of corporations, sales of public lands, royalties on forest, mineral and fisheries products, as well as the expenditures on such services as agriculture, civil government, education and public works. As the result of the Bureau's exhaustive analysis of the provincial public accounts, a summary statement of the ordinary receipts and expenditures of the Provincial Governments appeared for the first time in the 1919 Year Book. The various items of receipts and expenditures were classified under appropriate headings and a uniform terminology was adopted. From these statements it is possible to ascertain the amounts received and expended in each year under the respective headings for each province, as well as for the provinces collectively. The figures for the years 1916 to 1920 will be found on pp. 680-685 of the 1921 Year Book, those for 1921 on pp. 786-791 of the 1922-23 Year Book and those for 1922 to 1926 on pp. 836-841 of the 1927-28 Year Book.

The Bureau now makes more extensive analyses of the finances of the provinces, including capital and trust accounts as well as ordinary revenue and expenditure. These analyses are based on a uniform classification adopted at a conference held in 1933 between provincial treasury officials and the Dominion Bureau of Statistics.

Data for 1934 were given on the new uniform basis at pp. 858-861 of the 1936 Year Book; they are not available for publication for 1935 in view of the circumstances outlined in the last paragraph on this page.

Subsection 1.—Provincial Revenues and Expenditures.

Ordinary Revenues and Expenditures.—The total ordinary revenues and expenditures of the provinces for their individual fiscal years are shown in Table 25, pp. 849-850, for the census years 1871-1911 and for each year from 1916-34. Tables 26 and 27 on pp. 858-861 of the 1936 Year Book show detailed ordinary revenues and expenditures for 1934. These are not available for 1935 for reasons stated in the next paragraph. While revenues have grown very rapidly over the period covered in Table 25, expenditures have more than kept pace. Since 1916, *i.e.*, in the short space of 18 years, while total revenues of all provinces show an increase of 251 p.c., ordinary expenditures have increased by 304 p.c.

The Bank of Canada has been requested to make special reports on the financial situation of western provinces, and has found it necessary to have a revision of the classification adopted by the Dominion Bureau of Statistics in the annual report on 'Financial Statistics of Provincial Governments'. After consultation between the Bureau and the Bank's officials, it was deemed inadvisable to attempt any compilation of 1935 and later statistics of provincial finance, on the earlier basis, pending the appointment of the proposed Royal Commission to investigate taxation and other financial matters, when the requirements of the Commission and the Bank of Canada may be worked out more satisfactorily and a revised questionnaire planned for distribution by the Bureau.

The Growth of Provincial Taxation.—Whereas in earlier years the Dominion subsidies, together with the revenues arising out of the natural resources of the provinces and from fees for specific services rendered to the citizens, nearly sufficed to cover the whole expenses of government and rendered a resort to taxation for provincial purposes practically unnecessary in most of the provinces, the great increase in the functions of government since the commencement of the present century has put an end to this state of affairs. The aggregate amount of taxation for provincial purposes in the fiscal years prior to 1916 is unfortunately not available. Since that time provincial taxation has increased, according to the recently amended classification made in the Dominion Bureau of Statistics, from \$12,521,816 in 1916 to \$73,553,567 in 1934, exclusive of motor vehicle licences, liquor traffic profits, and other licences and permits, etc., an almost six-fold increase in 18 years.

The increase in the use of automobiles, both for commercial purposes and pleasure, is clearly demonstrated by the growing revenues from licences and permits issued by the Provincial Governments. In 1921 the total revenue of all provinces from automobile licensing amounted to \$7,857,751. It has since fluctuated considerably, reaching \$21,735,827 in 1929 but declining to \$19,952,575 in 1931. The revenue from this source in 1934 was \$20,840,513.

The growth of revenue from the gasoline tax still further demonstrates the increasing use of motor vehicles. In 1923 Manitoba and Alberta were the only provinces showing a gasoline-tax revenue, the total being \$280,404. In 1924 the five provinces of Prince Edward Island, Quebec, Manitoba, Alberta, and British Columbia collected gasoline-tax revenue to the amount of \$559,543, while in 1925 the same provinces, with Ontario added, collected \$3,521,388. In 1926 all provinces except Saskatchewan, collected gasoline taxes to the amount of \$6,104,716, in 1927 to \$7,615,907, and in 1928 to \$9,151,735; thereafter, gasoline taxes were collected in all provinces and amounted to \$17,237,017 in 1929, \$20,956,590 in 1930, \$23,859,067 in 1931, \$24,987,273 in 1932, \$25,931,480 in 1933, and in 1934 to \$26,812,275. The higher yields in recent years, however, were due partly to higher rates of taxation.

The provincial revenues from the liquor traffic increased considerably between 1925 and 1930, but subsequently declined until 1934. The adoption of government control of the sale of liquor in one province after another, until now it exists in all but Prince Edward Island, where prohibition is still in force, has resulted in trading profits, licensing revenues, and permit fees, all of which have swelled the provincial revenues. Prior to the adoption of government control such revenues were not available to the provinces. In 1925 the total revenue collected by all provinces from the liquor traffic was \$8,964,824; in 1926 it was \$11,609,392, increasing to \$16,793,656 in 1927. In 1928, it amounted to \$22,755,212, in 1929 to \$27,599,687, in 1930 to \$33,248,056, in 1931 to \$32,128,693, in 1932 to \$24,832,427, in 1933 to \$16,160,980 and in 1934 to \$12,814,120. The method of control varies somewhat as between the provinces. In the majority of cases there are independent commissions or boards to administer the provincial Liquor Traffic Acts, but the accounting and trading profits are shown somewhat differently in the various provincial public accounts reports.*

Fiscal Years of the Provinces.—The fiscal years of the provinces are as follows: P.E.I., Dec. 31; N.S., Sept. 30 prior to 1935 and Nov. 30 thereafter; N.B., Oct. 31; Que., June 30; Ont., Oct. 31 prior to 1935 and Mar. 31 thereafter; Man. and Sask., April 30; Alta. and B.C., Mar. 31.

* See Chapter XVII, pp. 626-629, and also the report of the Dominion Bureau of Statistics on "The Control and Sale of Liquor in Canada".

25.—Ordinary Revenues and Expenditures of the Provincial Governments for their respective fiscal years ended in the census years 1871-1911 and in each year from 1916 to 1934.

NOTE.—For provincial ordinary revenues and expenditures in all other provincial fiscal years since Confederation, see 1932 Year Book, pp. 734-736.

¹ Revised since the publication of the 1936 Year Book.

Subsection 2.—Provincial Debts and Assets.

In former issues of the Year Book statements were given showing the total direct liabilities of Provincial Governments and a detailed statement of the provincial assets. In accordance with decisions reached at the Conference mentioned on page 847, a uniform balance sheet for the provincial fiscal years ended in 1933 was presented at pp. 926-929 of the 1934-35 Year Book. Figures for 1934 were given at pp. 866-869 of the 1936 Year Book. In accordance with up-to-date accounting practice, the balance sheet was divided into three distinct categories, capital, income or current, and trust fund account assets and liabilities. As explained on p. 847, it is not possible to publish a comparative balance sheet of the provinces for 1935.

Bonded Indebtedness of the Provinces.—Of the total liabilities of the provinces the major part is represented by bonded debt owing to the public in Canada and abroad. The total gross bonded debt amounted to \$1,426,293,679 in 1936 as compared with only \$218,875,927 in 1916, an increase of over \$1,200,000,000 in the 20 years. In addition to this bonded debt there were treasury bills outstanding on provincial accounts amounting to \$232,928,298 for 1936. Figures of bonded debt for this and previous years to 1916 are given in Table 27. The rapid rise in the bonded debt of the provinces from \$218,875,927 in 1916 is accounted for largely by the development of public ownership of utilities (such as the "Hydro" in Ontario), the extension of the highways and surfaced roads systems in all provinces (highway debentures outstanding in 1935 accounting for \$492,000,000 of the provincial debt), and the requirements for the promotion of industrial activities and public and social welfare. These demanded heavy expenditures which could not easily be met out of current revenue. The borrowings, while increasing the

public debt, are in the main considered justifiable, as the public utilities are in most cases meeting from their revenues the interest on indebtedness incurred in their construction, and the provincial assets generally are sound enough to take care of capital investment for other services which are necessary to develop the country.

27.—Gross Bonded Debt (Exclusive of Treasury Bills) of Provincial Governments, by Provinces, fiscal years 1916 to 1936.

¹ In addition to the available assets shown most of the provinces had partially secured loans and advances in connection with unemployment relief, while Alberta had partially secured loans and advances, and sale of contracts for School Lands Fund amounting to over \$11,000,000 for 1935 and \$12,000,000 for 1936; British Columbia had partially secured loans and advances amounting to over \$40,000,000 for 1935 and \$60,000,000 for 1936.

² Ontario does not consider Dominion Debt Account; Common School Fund; Quebec Turnpike; and Plant, Live Stock and Equipment, "available assets".

Interest Payments and Receipts of the Provinces.—The current burden of a debt in the case of a continuing organization is represented by interest payments, which may be offset in whole or in part by interest received on loans either to provincially-owned public utilities or to corporations or individual citizens. In a country where provincial public policy varies widely with regard to public ownership, it appears desirable to include a statement showing, for each province, the gross interest payments, the interest receipts and the net interest payments. This information is given for the provincial fiscal years ended in 1934 below. At the time of going to press comparable figures for 1935 are not available.

Province.	Gross Interest Paid.	Interest Received.	Net Interest Paid.	Net Interest Paid per Capita.

¹ Revised since the publication of the 1936 Year Book.

Section 3.—Municipal Public Finance.*

The existence of local self-governing units has always been characteristic of democratic societies, and nowhere more so than in Canada. The struggle for responsible government was naturally accompanied by an agitation for local self-government in the cities and towns of Canada and, after responsible government had been conceded, a complete system of municipalities was established throughout the old Province of Canada by the Municipal Act of 1849.† Under the division of powers made by the British North America Act between the Dominion and the Provincial Governments, legislation regarding municipal government, being a local matter, was naturally assigned to the provinces, which differ considerably with regard to their types of municipal organization. Thus in Prince Edward Island the only incorporated municipalities are the city of Charlottetown and seven incorporated towns. In British Columbia seven of the 33 cities have fewer than 1,000 people, while there are no towns at all and only 17 villages; again, in the same province the rural districts are mainly administered from the provincial capital there being only 28 rural municipalities. Finally, in Saskatchewan and Albert

* Revised by Col. J. R. Munro, Chief of the Finance Branch of the Dominion Bureau of Statistics. The Branch issues statements on "Financial Statistics of Urban Municipalities of 10,000 Population and Over" on "Bonded Indebtedness of Municipalities" and on "Assessment Valuations of Municipalities". For a list of publications see Chapter XXIX, Section 1, under "Finance".

† For a brief outline of the rise of the municipal system of Ontario, see 1922-23 Year Book, p. 108.

there exist local improvement districts, areas which have not as yet been organized into rural municipalities, and where the taxes are levied, collected and expended by the Provincial Governments. Such districts, however, may be regarded as on the way to becoming self-governing rural municipalities and their statistics are therefore included in Table 29 which gives statistics of the numbers and types of municipalities in 1934.

¹ Nova Scotia has 18 counties, some of which are "municipalities", while others are divided into "municipalities".

² There are 43 counties in all, geographically, but a number are united for municipal purposes.

³ Officially known as "townships".

⁴ Includes Flinflon Municipal District.

Municipal Revenue from Taxation.—As a result of accumulated borrowings to meet conditions peculiar to the depression, the relentless advance of interest charges against realizable taxation has brought about a condition in many municipalities where expenditures are out of all proportion to receipts, in spite of the fact that the trend of interest rates has been definitely downwards. It is natural under such conditions that the general subject of taxation should receive the increasing attention of the public and, of all forms of taxation, the imposition of municipal taxes—where the tax is applied broadly to assessed valuations placed on homes and other real property and on incomes and business—hits the ratepayer's pocket most directly.

In view of the wide public interest in municipal taxation, the Dominion Bureau of Statistics published a bulletin giving as complete a picture as is possible of tax levies and taxation receipts of municipalities, classified into cities, towns and rural municipalities, by provinces, for the years 1913-34.* The following summary table, taken therefrom, gives figures of tax receipts for these years so far as they are available. Unfortunately, there are certain inconsistencies and omissions, as between provinces, which the footnotes to the table attempt to explain.

* See the bulletin "Municipal Tax Levies and Receipts, by Provinces", obtainable from the Dominion Statistician.

¹ Comparable figures not available. ² Statistics are for Charlottetown only. ³ Cities of Saint John, Moncton and Fredericton only, except for 1934 figures which are for Saint John and Moncton only. ⁴ Revenue for municipalities and receipts for schools. See also footnote 2 to Table 33. ⁵ The figure shown is for all municipalities except cities, whereas cities are included for 1932 and 1933. A comparable figure is not obtainable but receipts for Winnipeg were \$10,874,891, and the total tax imposition for the cities of Brandon, Portage la Prairie and St. Boniface was \$1,652,241. ⁶ B.C. has no municipal organization of towns, and provision was first made for villages in 1922. Statistics of tax receipts for cities and rural districts are shown from 1917-21, and those for cities, villages and rural districts from 1922.

Municipal Assessments.—The chief basis of municipal tax revenue is the real estate within the limits of the municipalities; though, as indicated above, in certain provinces personal property, income, and business carried on are also taxed. General taxes are normally assessed at the rate of so many mills on the dollar of the assessed valuations. In the Prairie Provinces, the values of improvements made to real property are often rated at a very low figure, *e.g.*, in Saskatchewan, where the taxable valuations of buildings are about 12 p.c. of the taxable valuations of lands, and in Alberta, where they are about 28 p.c. of the taxable valuations of lands, as shown in Table 31.

There are various reasons for fluctuations in assessment valuations, due to differences in laws and varying practices with regard to assessment as among provinces, as among classes of municipalities, and as among municipalities of the same class from year to year. Such matters are more fully dealt with in the special report of the Dominion Bureau of Statistics on "Assessment Valuations by Provinces", obtainable from the Dominion Statistician.

Land valuations in the West, which in earlier years were somewhat inflated, have of late been assessed on a sounder basis, and in some provinces the Equalization Boards have placed a more equitable valuation on lands as among the various rural municipalities.

1933, or 1934 in Alberta.

⁵ These amounts include property temporarily exempted.

⁶ In addition, assessments for schools only in Ontario were: townships \$3,125,660, towns and villages \$22,347,193,

and cities \$6,780,452 in 1930; townships \$4,486,690, towns and villages \$20,499,195, and cities \$3,516,472 in

1931; townships \$4,976,492, towns and villages \$18,249,670, and cities \$6,803,023 in 1932; townships \$3,495,026,

towns and villages \$12,884,022, and cities \$8,678,946 in 1933; and townships \$2,636,133, villages \$1,167,415,

towns \$16,656,397, and cities \$86,657,415 in 1934.

⁷ \$484,736 is by special franchise.

⁸ \$441,861

is by special franchise.

⁹ Includes special franchise (amount not stated).

¹⁰ Includes certain

other taxable valuations.

Bonded Indebtedness.—Like other Canadian governing bodies the municipalities of the greater part of Canada borrowed rather freely during the boom period of 1900-12, and again during the nineteen-twenties. The bonded indebtedness of Ontario municipalities rose from \$153,568,409 in 1913 to \$483,952,700 in 1934, while that of Quebec municipalities increased from \$173,720,141 in 1915 to \$565,218,160 in 1934, and a proportionate increase took place in other provinces. The recent growth in the bonded indebtedness of all classes of municipalities is shown by provinces in Table 32. The figures show that there was an increase in 1934 over 1933 in the provinces of Prince Edward Island, Nova Scotia, New Brunswick, and Quebec; the others showed a decrease. In Saskatchewan, net debenture debt is shown for all municipalities in 1919, while from 1920 the statistics represent gross debenture debt. In Alberta in the earlier years, figures represent principally net debenture debt but from 1929 gross debenture debt is shown. All other provinces give gross total debenture debt throughout.

32.—Total Bonded Indebtedness of All Classes of Municipalities, by Provinces, 1919-34.

NOTE.—Figures are for gross debenture debt unless otherwise indicated.

¹ Municipalities included cannot be enumerated for the years 1919-23; figures represent Charlottetown and Kensington 1924-33; Montague for 1925-33; Summerside, Souris, Georgetown, and Alberton 1926-33; and Borden 1932-33. For the latest year the figures include all eight incorporated municipalities of the province.

² Municipalities included cannot be enumerated for the years 1919-23; figures are for 3 cities, 18 towns, 2 villages, and 15 counties in 1924; 2 cities, 13 towns, 2 villages, and 15 counties in 1925; 3 cities, 18 towns, 1 village, and 15 counties in 1926; 3 cities, 23 towns, 4 villages, and 15 counties in 1927, 1928 and 1929; 3 cities, 19 towns, 2 villages, and 15 counties in 1930; and 3 cities, 20 towns, 2 villages, and 15 counties in 1931, 1932 1933 and 1934.

³ Figures for this year are for net debenture debt.

⁴ Footnotes 1, 2 and 3 should

be noted in interpreting these totals.

¹ Census of 1931.² Real Property and Public Utility Assets not included.

Section 4.—National Wealth and Income.

Subsection 1.—National Wealth.

The economic concept of national wealth is concrete and purely material since economics is not able to take cognizance of the immense field of intangible wealth created by churches, schools and other institutions, nor of such things as climate, location, health, etc., which promote individual and national welfare and are often referred to as wealth, but in a different sense from that meant here. Our national wealth, as here understood, is the sum total of our physical assets. It includes all farms, factories, equipment, merchandise in stock, and the thousand and one material things which Canada as a nation possesses. It does not include such things as stocks, bonds, mortgages, etc., which an individual regards as wealth but which, in reality, are mere evidences of ownership. From the point of view of the nation as a whole, all such claims and counter claims must be ruled out. There is, too, a large field of intangible wealth such as that represented by organization for doing business of all kinds, the reputation of business firms, managerial experience, etc., of which no account can be taken in a statistical determination of wealth. Further, a distinction must be made between "present" and "potential" wealth. Canada has an immense potential wealth in forests, mines, etc., the present value of which it is impossible to estimate.

Notwithstanding the enormous statistical and economic difficulties inherent in any evaluation of the national wealth, the justification for such attempts lies in the importance of such information for an analysis of a nation's social and economic position. A general idea of the size and composition of the national wealth is essential for the intelligent consideration of many problems, both national and international, and although, in view of the numerous elements of uncertainty in a calculation of this nature, the statistics must be regarded as indicative rather than strictly accurate, when carefully prepared they hold a very important place in a national statistical system.

There are several methods of computing national wealth, *i.e.*, the aggregate value of the public and private property within the nation apart from undeveloped natural resources. Perhaps the most familiar of these methods is that of working back to capital values through income tax returns, but this can be applied only in countries where small as well as large incomes are assessed for income tax. A second method is that of estimation from probate returns, the value of the estates of deceased persons being regarded as representative. A third is that of a complete census, based upon a canvass of the individual. A fourth method, namely, the so-called "inventory" method, is often employed.* The estimate of Canada's wealth herein presented is based on the "inventory" principle, *i.e.*, an attempt is made to secure for the nation an approximation of the businessman's inventory of his possessions. This method consists in totalling the amounts known from various sources to be invested in agriculture, manufacturing, dwellings, etc. It does not include the value of undeveloped natural resources but only natural wealth which has been appropriated. For instance, it includes the value of the machinery and other capital equipment used in coal mining but not the unmined coal; the boats used in fishing but not the fish in the sea; the power plants and equipment used in developing water power but not the waterfalls themselves. In the case of forest wealth partial exception is made by the inclusion of accessible raw materials. When making comparison between the different provinces it should be remembered that this method tends to understate the wealth of any section of the country which is rich in mines, fisheries or water power.

Whatever method is used, difficulty arises when we try to reduce all the things which go to make up wealth (things which once created are not themselves subject to violent change) to a common denominator. Estimates of national wealth must always be expressed in terms of the national currency. Yet the purchasing power of the currency unit is always fluctuating and since 1929 had increased at one point (February, 1933) by more than 50 p.c. in terms of wholesale prices. Even in 1930, the average index number of wholesale prices was down by nearly 10 p.c. from 1929, while in December of that year the average index number of wholesale prices was 19 p.c. lower than in the same month of 1929.

The effect of such drastic reductions in values is first felt by the commodities which are being currently produced and, through these commodities, the dollar value of production is diminished and consequently the national income of a country where most people are producers. Ultimately, a persistent decline of this character affects the capital values of real estate, buildings, machinery, etc., and its influence is then felt in a reduction in the national wealth as stated in dollars.

The first official estimate issued by the Dominion Bureau of Statistics was for 1921, being based on the census data of that year. The national wealth was then placed at \$22,195,000,000. Later estimates were \$25,673,000,000 for 1925 and \$27,668,000,000 for 1927. The estimates for 1921, 1925 and 1927 are, not exactly comparable with those for 1929 and 1933 given below, but are sufficiently so for most purposes. The estimate for 1929 is \$31,276,000,000, and the 1933 estimate \$25,768,000,000. The former presents a picture at the peak of domestic prosperity, whereas, that of 1933 reflects the writing down of values resulting from the depression.

Wealth of Canada by Items, 1929 and 1933.—In the items showing the composition of the national wealth, as set out in Table 34, care has been taken to exclude duplication. In any consideration of the individual items it should be

* An explanation of method and of the background of early estimates of national wealth as applied to Canada will be found in the article "The Wealth of Canada and Other Nations" by R. H. Coats, Dominion Statistician, published in the *Journal of the Canadian Bankers' Association*, October, 1919.

remembered that each item covers only the portion of wealth which is stated in the description attached thereto. For instance, the item "Fisheries" includes only capital invested in primary operations. Capital invested in fish-canning and -curing establishments is included with "Manufactures", though this also might be considered as part of the wealth connected with "Fisheries". Similarly, the items for "Manufactures" do not include lands and buildings in urban centres which are shown under the heading "Urban Real Property".*

* A fuller explanation of the composition of the separate items is contained in the bulletin "Canada's National Wealth", obtainable from the Dominion Statistician on application.

31.—Estimate of the National Wealth of Canada, with Percentage and Per Capita Distribution of Component Items, 1929 and 1933.

NOTE.—For discussion of these items, see p. 871 of the 1933 Year Book and the bulletin referred to above.

Aggregate and Per Capita Wealth, by Provinces, 1929 and 1933.—As regards the provincial distribution of wealth in 1933, Ontario ranked first with an estimated aggregate wealth of \$8,796,000,000 or 34.14 p.c. of the total; Quebec second with \$6,738,000,000 or 26.15 p.c.; Saskatchewan third with \$2,527,000,000 or 9.81 p.c.; and British Columbia fourth with \$2,431,000,000 or 9.43 p.c. of the whole.

While Ontario and Quebec led in absolute wealth, the western provinces came first in per capita wealth. British Columbia held first rank with a per capita wealth of \$3,414, Alberta second with \$2,721 and Saskatchewan third with \$2,711. Ontario with a per capita wealth of \$2,468 was fourth, Quebec was fifth with \$2,269, and Manitoba sixth with \$2,201. The per capita wealth for the whole Dominion was estimated at \$2,413.

Further details, including revised figures for 1929, are shown in Table 35. In 1929 the provinces held the same relative places, both as regards aggregate and per capita wealth.

35.—Provincial Distribution of the National Wealth of Canada, with Percentage and Per Capita Analyses, 1929 and 1933.

NOTE.—Figures for 1921 and 1925 are given on pp. 849-850 of the 1927-28 Year Book, and for 1927 on p. 870 of the 1931 Year Book.

¹ Includes the population of the Northwest Territories: 9,000 in 1929 and 10,000 in 1933, 0.09 p.c. in both cases.

² As the statistics for Yukon are uncertain, the per capita estimate of wealth is open to question and has not been shown.

³ Per capita figures are worked out on the basis of revised populations, see p. 153.

⁴ Revised since the publication of the 1936 Year Book.

Analyses of Itemized Wealth, by Provinces, 1929 and 1933.—In Table 39 on pp. 882-883 of the 1936 Year Book detailed statistics of the wealth of each province by leading items were published. This information is not repeated in this edition.

Subsection 2.—National Income* and Income Tax Statistics.

Definition of National Income.—"The annual labour of every nation is the fund which originally supplies it with all the necessaries and conveniences of life which it annually consumes, and which consist always either in the immediate produce of that labour, or in what is purchased with that produce from other nations."

—ADAM SMITH. This is perhaps the earliest modern definition of *national income*, and is still among the best, when it is interpreted in accordance with modern knowledge regarding the balance of international payments and the necessity of keeping productive equipment in running order. It must also be remembered that while the national income consists in goods and services of the most varied kinds, its total amount can be stated only in terms of money.

Following, is a statement of the nature of national income from the standpoint of the statistical technique used in its compilation, the description also being in line with present-day economic theory.

"Year in, year out, the people of this country, assisted by the stock of goods in their possession, render a vast volume of work toward the satisfaction of their wants. Some of this work eventuates in commodities, such as coal, steel, clothing, furniture, automobiles; other takes the form of direct personal services, such as are rendered by physicians, lawyers, government officials, domestic servants, and the like. Both types of activity involve an effort on the part of an individual and an expenditure of some part of the country's stock of goods. If all commodities produced and all personal services rendered during the year are added at their market value, and from the resulting total we subtract the value of that part of the nation's stock of goods which was expended (both as raw materials and as capital equipment) in producing this total, then the remainder constitutes the net product of the national economy during the year. It is referred to as national income produced, and may be defined briefly as that part of the economy's end-product which is attributable to the efforts of the individuals who comprise a nation."†

The Difficulty of Measuring National Income.—The precise statistical measurement of the national income is a matter of insurmountable difficulty, and the most indefatigable research into all the relevant statistics, in order to establish a figure of national income, must always leave an appreciable margin of error. Indeed, it is no easy matter even for an individual to establish an accurate money figure as representing his *total* income, especially where he has to include in that total income, besides his cash income, an allowance for the rental value of his (owned) house and his durable belongings therein, together with an allowance for the money value of the commodities produced and consumed within the household (such as eggs and garden produce), and of the services, ordinarily bought and sold but rendered gratis within the family circle. Yet this is the only way of obtaining the total income of the family. While such income, not received directly in money, but in commodities produced and services rendered, is not, except for house and furniture rent, an important percentage of the family income in most urban families, it constitutes a very important part of the income of most rural families, who to a much larger extent consume the commodities which they themselves produce. For this reason, indeed, comparisons between the incomes of urban families and rural families are often misleading, through not allowing for the non-money income of the latter. Certainly most people never think of their non-money income as income at all, and would never consider putting the rental value of their owned homes into

* The estimate of national income has been revised by Sydney B. Smith, M.A., Dominion Bureau of Statistics.

† See *National Income 1929-32 and 1929-35*, U.S. Department of Commerce.

their income tax returns. Indeed, the income tax authorities of Canada do not expect them to do so.

Any difficulties experienced in expressing the total income of an individual as a single figure are multiplied a million-fold in any attempt to express the total of the national income as a single figure. The individual and corporate incomes which are to be combined into this grand total *without duplication* are of such a heterogeneous character that any figure which may be given as the grand total of the national income must include some margin of error.

The Influence of Changes in the Price Level on National Income.—

Fluctuations in the general level of prices, which have been so great in the post-war period (see p. 791), have necessarily affected the money value of the national income. Under these circumstances, it is essential that any estimate of the national income should be definitely stated as for a particular year, so that the national income for each year may be related to the prevailing price levels and corrected by the price levels of that year. Thus, when the official index number of wholesale prices is taken to correct the estimate of the money value of the national income for the decline in prices, it is found that \$71.60 bought on the average as much in commodities in 1934 as \$95.60 bought in 1929. Then, whereas the money value of the national income had declined by 37.3 p.c. in these five years, the adjustment for the drop in prices would reduce the decline in "real" national income of all commodities and services to 16.3 p.c., on the assumption that the prices of services rendered declined proportionately with the prices of commodities included in the index number of wholesale prices. Thus, on the assumption that the money value of the national income in 1934 was about 63 p.c. of that of 1929, the "real" national income would be nearly 84 p.c. of the total for 1929.

Estimate of National Income as Based upon the Survey of Production.—

The industries concerned with the production of *form* utilities employed, in 1931, approximately five-eighths of all gainfully occupied Canadians, and they produced commodities to the net value of about \$2,381,000,000 in 1934, as shown in the Survey of Production at pp. 214-215 of this volume. Then, on the assumption that the remaining three-eighths of the gainfully occupied Canadians who are engaged in the transportation and communications industries, in wholesale and retail trade, in finance and in personal and professional service, are proportionately as productive on the average as those who engage in the production of *form* utilities, we attain a total figure of what labour, assisted by capital, has presumably been able to produce in the course of a calendar year. This figure has, for the latest fifteen years, been published in the Dominion Bureau of Statistics' Annual Survey of Production, and in the Canada Year Book.

On the basis of the annual Census of Industry and the occupational distribution of the population as ascertained at the Decennial Censuses of 1921 and 1931, the grand total value of the national production of commodities and services in each year from 1920 to 1934, inclusive, has been approximately estimated as follows: 1920, \$5,523,000,000; 1921, \$4,215,000,000; 1922, \$4,520,000,000; 1923, \$4,696,000,000; 1924, \$4,643,000,000; 1925, \$5,178,000,000; 1926, \$5,600,000,000; 1927, \$6,101,000,000; 1928, \$6,342,000,000; 1929, \$6,072,000,000; 1930, \$5,335,000,000; 1931, \$4,100,000,000; 1932, \$3,370,000,000; 1933, \$3,193,000,000; 1934, \$3,808,000,000. The totals for 1930-32 were revised in accordance with the findings of the decennial census, while those for 1933, as published in the 1936 edition of the Canada Year Book, have been changed due to revisions in the figures for net production and in the provincial distribution of population.

36.—Total and Per Capita Production of the Gainfully Occupied Population in 1933 and 1934, Based upon the Survey of Production, 1933 and 1934, and the Percentage of Persons Occupied in the Production of Form Utilities as Found at the Census of 1931.

NOTE.—The figures for 1933 have been changed due to revisions in the net production figures and in the provincial distribution of population. In conformance with Resolution 23, adopted by the Conference of British Commonwealth Statisticians, 1935, the cost of fuel and purchased electricity was deducted from the gross value of processed commodities in 1933 and 1934. To this extent the results are rendered incomparable with those of preceding years.

* Dominion average used.

Canada is on balance a debtor country, and in order to ascertain her net national income, deduction must be made from her national production of the amount required to meet the *net* interest payments due to outsiders. Such *net* interest and dividend payments are estimated for 1934 in our "Balance of International Payments" at \$195,000,000, payments on this score reaching \$290,000,000 as against receipts amounting to \$95,000,000. When this outward balance of interest and dividend payments is deducted from the \$3,808,000,000 of the above table, the remainder is \$3,613,000,000, which may be considered as the net national income of the Canadian people in 1934. It is subject to certain deductions required to maintain the national productive equipment in an efficient state.

Incomes Assessed for Income Tax in Canada.*—In those countries of the world where an income tax has been established for a considerable time the figures of the assessed income have been generally accepted as furnishing a guide both to the amount and to the distribution of the total national income by classes. Estimates of the national income, based upon income tax statistics, have been published, for example, in the United Kingdom and in the United States.

The War introduced the income tax into Canada in 1917. Under the Income War Tax Act, the returns of the incomes of individuals and corporations are filed

* This material has been revised by the Income Tax Branch of the Department of National Revenue.

in the year following the earning of the incomes. Further, since the fiscal year ends on Mar. 31, the bulk of the receipts from the income tax usually comes in during the first two or three months of the next following fiscal year. Thus the income tax received in the fiscal year ended Mar. 31, 1936, represents, in the main, income tax collected on 1934 income, and the income tax collected in the fiscal year ended 1935 represents, in the main, 1933 income. It is important that these facts should be kept in mind when considering income assessed in different years. Further, the particular provisions of the income tax existing at any particular time, and the amendments extending or contracting the scope of the income tax by raising or lowering the limit of taxable income, or increasing or lowering the allowances for children, etc., should also be borne in mind in the consideration of the following tables. Among these, Table 37 gives the grand total income of individuals and corporations assessed for the purpose of income war tax for the past sixteen years, while Table 38 gives this income by provinces for the past five years and Table 39 shows the amount of income tax collected by provinces in the past five years. Tables 40 and 41 analyse the payments of income tax in the past four years by size of income class and by occupation of the taxpayer, respectively.

¹ Exclusive of 5 p.c. tax on dividends.

Table 42 shows the amount received from the special 5 p.c. tax of 1933 imposed at the source on interest or dividends paid by Canadian debtors to non-residents of Canada, and on interest or dividends received by Canadian residents by way of bearer coupons or cheques where such are payable by Canadian debtors, optionally or otherwise, in foreign currencies, and such coupons or cheques are cashed in a currency which is at a premium over Canadian funds. The receipts are classified by provinces, no further classification being available.

Subsection 3.—Outside Capital Invested in Canada and Canadian Capital Invested Elsewhere.*

An estimate of the outside capital invested in Canada and the Canadian capital invested outside of the Dominion is prepared by the Internal Trade Branch of the Dominion Bureau of Statistics. Any estimate of this character is liable to a margin of error, but the utmost care has been taken in the computation and it is believed that the figures approximate to actual conditions. More complete information is being obtained from year to year, and a comprehensive revision and extension of the statistics on this subject is now in progress. In the meantime, the figures given are of the latest available date, *viz.*, Jan. 1, 1935; figures for previous years will be found on pp. 879-880 of the 1933 Year Book, p. 947 of the 1934-35 Year Book, and p. 891 of the 1936 edition.

It is estimated that the total investment of British and foreign capital in Canada on Dec. 31, 1934, was \$6,887,812,000. Of this sum, \$2,801,834,000 was British capital, \$3,990,693,000 was from the United States and \$95,285,000 from other countries.

It must be borne in mind that Canadians have invested large amounts of capital abroad. The Bureau estimates that Canadian investments in other countries amounted to \$2,083,341,000 at the end of 1934, or 30 p.c. of the amount of outside investments in Canada. Of this \$1,310,833,000 was placed in the United States, \$112,160,000 in the United Kingdom and \$660,348,000 in other countries. (Table 44.)

It is estimated that the amount of capital invested in Canada is \$18,000,000,000. This sum includes the bonded indebtedness of Dominion, Provincial and municipal governments, investments in railways, all manufacturing concerns, mines and metal industries, public utilities, trading establishments, finance, insurance, land and mortgages. It does not include private capital in domestic enterprises such as farms, homes, etc. Of this sum it is estimated that 62½ p.c. or \$11,200,000,000 is owned in Canada; 22 p.c. or \$4,000,000,000 in United States; 15 p.c. or \$2,800,000,000 in the United Kingdom; ½ p.c. or \$95,000,000 in other countries.

* Revised by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics. For a list of the publications of this Branch, see Chapter XXIX.

If the basis of comparison is total national wealth, British and foreign investments decrease in significance. Canada's national wealth in 1933 was estimated at \$25,768,000,000 (see pp. 860-863); net British and foreign investments in Canada were about \$4,785,000,000, or 18.5 p.c. of the total.

CHAPTER XXII.—CURRENCY AND BANKING; MISCELLANEOUS COMMERCIAL FINANCE.

In this chapter are assembled the statistics regarding financial institutions and transactions, other than those pertaining to insurance which are dealt with separately in Chapter XXIII. The important subject of currency and banking is treated in Part I of the chapter, while trust and loan companies, sales of Canadian bonds, corporation dividends, and foreign exchange, constitute sections of the miscellaneous commercial finance covered in Part II.

PART I.—CURRENCY AND BANKING.

Section 1.—Historical Sketch.

The early history of the currency of Canada, both of the central provinces and of the maritime colonies, from the time of the first settlements to Confederation, is the story of a polyglot currency and the involved difficulties of determining exchange rating for the various coins and pieces.

The salient influences of early political and commercial affiliations upon the types of currency in use are reviewed below.

The Development of Currency in New France.

So long as trade remained in the hands of a few private traders, barter was the rule. Beads and other trinkets which appealed to the Indians, blankets and other useful articles, were traded directly for furs. With the further development of the colony during the French *régime*, while barter still remained, the growing complexity of social organization and trade emphasized the need for a convenient monetary unit, which was met by the adoption of French currency, but, in order to retain in the colony the gold and silver coin which arrived there, it was "over-rated" to the extent of about one-third of its value in France. Thus there was a dual valuation of the same coinage, officially recognized as "money of France" and "money of the country". Copper coins were given an even higher over-rating. In spite of this, money remained very scarce and at one time wheat at current market rates was made legal tender in spite of the difficulties and hindrances to trade inherent in fluctuating values. The illicit fur traffic with English fur traders resulted in the introduction of Spanish silver dollars as well as various worn and mutilated coins to help fill the need. In 1681 foreign coin was officially recognized but it was stipulated by ordinance that it should pass by weight; it was given the one-third increase in value which custom had established for French currency.

One of the earliest forms of fiat paper money in the western world was introduced into New France in 1685. This "card money", as it was termed, was not introduced primarily to meet the lack of circulating media (although, incidentally, it did relieve the prevailing scarcity) so much as an official expedient to meet the pay of soldiers until the annual Royal supplies were forthcoming. The first issue was backed by such annual supplies and was duly redeemed when the supplies arrived, but five years later another issue was made without such backing. This was the beginning of an inflationary move. By 1713, the amount of such unbacked currency outstanding was such as to reduce trade to a chaotic condition and confidence was seriously undermined. Later, card money was again resorted to, but on a sounder basis. The expanding needs of the Treasury, however, unfortunately brought about

the introduction and unlimited use of *ordonnances* and *billets* which quickly undermined the financial structure again, and at the time of the cession, the total amount of paper money outstanding was estimated at 80 million livres. It was because none of this paper money in its later issues was paid in full, and much of it was not redeemed in any manner, that the people of Old Canada resisted so firmly the efforts made in 1792, 1807 and 1808 to establish banks of issue under the authority of Parliament.

In 1721 the first effort was made to establish a special currency for the colony, but this was limited to copper coins and was not successful.

The British Period to Confederation.

The period of military occupation (1759-1763) was marked by conditions of chaos in the matter of currency, but with the revival of the business activity of Montreal and Quebec with Nova Scotia and Massachusetts the currency standards of the latter were adopted and the Spanish dollar again made its appearance. It became the medium by which exchanges were balanced with Britain. Normally, the Spanish dollar was valued at 4s. 6d. sterling, but the tendency was to over-value it, and in colonial ratings it varied between 4s. 6d. to as much as 7s. or 8s. In Nova Scotia, for instance, the customary rating for the Spanish dollar was 5s. while in New York colony it was 7s. 6d. to 8s. Corresponding margins of value prevailed in regard to other coins in the different colonies. The former of these two standard ratings, known as the Halifax currency, was accepted by Quebec, and Montreal adopted the latter, known as the York currency. Of course, there was much confusion and hindrance to trade between Montreal and Quebec as a result of the adoption of the dual standard.

In order to iron out the difficulties, Governor Murray passed an ordinance which established an official rating for the Province of Canada. The Spanish dollar was rated at 6s., the French crown at 6s. 0½d., and the British shilling at 1s. 4d. The custom of cutting up larger coins to make small change, which had grown up in the past, was prohibited. To meet such urgent needs for small coin, the merchants themselves issued bills due or "bons" good at their face value for merchandise. Such "bons" were the true forerunners of the bank note. The ratings given by Governor Murray were a compromise which was not permanently acceptable and proved unsatisfactory.

After the outbreak of the American Revolution in 1775, Quebec influences prevailed and Halifax currency became standard, although the use of York currency persisted in Upper Canada (where the United Empire Loyalists supported its use) until 1821, when it was deprived of legal recognition by an Act of Upper Canada.

In order to pay the expenses of the War of 1812, army bills issued against the credit of the United Kingdom were circulated. These, in the main, bore interest and were convertible into bills of exchange on the United Kingdom; they were redeemed within the ensuing four or five years. These army bill issues tended to renew confidence in paper money and familiarize the people with its use, thus paving the way for the note issues of the early banks after 1817. These first banks were created in Lower Canada, at first as private corporations but obtained charters a few years later. The charters granted to the early banks in Lower Canada are the foundations upon which subsequent improvements have been built.

In the early days of banking, one of the chief functions of banks was to issue promissory notes payable to the bearer on demand; where the banks' credit was

good these notes passed freely from hand to hand, and were the chief circulating media in the Canadas. In some cases bank notes were preferred to those issued by the colonial governments.

The Bank of Montreal began business towards the end of 1817 as a private institution. In the following year the Quebec Bank was established as well as the Bank of Canada at Montreal. These three Lower Canada institutions obtained their charters in 1822. In Upper Canada the Bank of Upper Canada was established at Kingston in 1818, but the first bank to receive a charter was the second Bank of Upper Canada established at York (Toronto) in 1821. In Nova Scotia, unsuccessful efforts were made as early as 1801 to form banks, and in 1812 the Government began to issue treasury notes not bearing interest and re-issuable, sometimes redeemable and sometimes not. This policy was continued down to Confederation. It seems to be in part because of these treasury issues of notes that no bank was started in Nova Scotia before 1825, when the Halifax Banking Company (private) commenced business. The Bank of Nova Scotia received a regular charter in 1832. A bank, the Bank of New Brunswick, was incorporated in New Brunswick in 1820.

Before the union of the two Canadas, the privilege of issuing paper money had been enjoyed almost entirely by the banks alone. Lord Sydenham now proposed a provincial bank of issue with the chartered banks gradually relinquishing the right to note issue, and Hincks,* a young financier of promise, became chairman of the Joint Committee on Currency and Banking established in 1841. This Committee supported the provincial bank idea in principle. The chartered banks, of course, opposed it, and the bill was ultimately defeated, but the principle re-appeared in subsequent measures and ultimately became the basis of the Dominion note issues. Lord Sydenham and Hincks did much, nevertheless, to strengthen and control the banking system.

A period of crisis in 1848-49 forced the adoption of a policy which led to the withdrawal from the banks of the right to issue notes of lower denominations than five dollars. The Government also now issued provincial debentures to the amount of one million dollars payable on demand. They were made acceptable in all payments due the Government and were re-issuable. This is often regarded as the introduction of government paper into the currency system of the country, although, as already noted, Nova Scotia had issued government paper in 1812. Its success led to the revival of the project for a provincial bank of issue and in 1850 the Free Banking Act, designed to restrict note issue privileges and so reduce the number of different media of exchange, was passed, but the chartered banks would not agree to avail themselves of its provisions, nor were conditions in Canada altogether ripe for a change from the elastic system of note issue which had now become established in spite of the fact that, from the point of view of the note-holding public, the proposed system would have been safer.

Between 1840 and 1867 the problem of establishing a uniform metallic currency standard for united Canada was also dealt with. The majority of Canadians strongly favoured the United States decimal system and Hincks declared in its favour. Authorities in the United Kingdom, on the other hand, pressed for the sterling system. In 1853 and in 1858 the decimal system was adopted in the Canadas and thus duplication of sterling and decimal systems was removed and the Canadian dollar, equivalent to the United States dollar, was established with the sovereign as legal tender. After 1860, the official accounts in Nova Scotia and New Brunswick were kept according to the decimal system.

* Later, as Sir Francis Hincks, he was Dominion Minister of Finance (1869-73). His influence on the development of Canadian banking was very marked until his death in 1885.

The Development of Currency and Banking after Confederation.

Currency Acts.—At Confederation, jurisdiction over currency passed to the Dominion Government. By the Uniform Currency Act of 1871 (34 Vict., c. 4), the decimal currency was extended throughout the Dominion; the British sovereign, rated at \$4.86 $\frac{2}{3}$, became the standard coin and the United States eagle was made legal tender for \$10, while authority was given to coin a Canadian \$5 gold piece. No Canadian gold coinage was issued, however, prior to the establishment of the Canadian branch of the Royal Mint in 1908, the first coins struck being sovereigns similar to those of the United Kingdom, but with a small "C" identifying them as having been coined in Canada. In May, 1912, the first Canadian \$10 and \$5 gold pieces were struck, but the Canadian gold coinage has so far been limited in amount, since Canadians have generally preferred Dominion notes to gold for use within the country, and, when gold is needed for export, bullion or British and United States gold coin serve the purpose equally well.

The currency system established by this Act was very little changed until the Currency Act of 1910 which made the standard a fixed weight of fine gold instead of the British sovereign, the latter becoming legal tender.

In respect to paper currency, the provisions of the Provincial Note Act of 1866 were extended to the new Dominion in 1868, and "Dominion" notes came into being. After 1870 such notes could be issued to the amount of \$9,000,000 against a 20 p.c. specie reserve (\$2,000,000 reserve was required for the entire \$9,000,000) and notes in excess of this were to have 100 p.c. specie reserve. Dominion notes which were legal tender were in circulation side by side with bank-note issues which were not legal tender. In 1880 the basis of the present system was definitely established (see below, p. 877, and under heading Chartered Bank Notes, pp. 890-891).

The Bank Act.—After tentative legislation in 1867, the Bank Act of 1870 provided that new banks must have a minimum paid-up capital of \$200,000; at least 20 p.c. of the subscribed capital had to be paid up in each year after the commencement of business. A proposal to limit the liabilities of banks in relation to capital and specie and Government debenture holdings was not translated into legislation. Bank notes in circulation were not to exceed the amount of paid-up capital. The right to issue notes under \$4 was withdrawn, largely in consideration of the abolition of the tax of 1 p.c. on note circulation. If possible up to 50 p.c., but in no case less than one-third, of a bank's cash reserves were to be held in Dominion notes. Dividends were limited to 8 p.c. until or unless the bank's reserve fund was the equivalent of 20 p.c. of its paid-up capital. In case of the failure of a bank, double liability of shareholders became enforceable without waiting for the realization of the bank's general assets. Banks were required to transmit certified lists of shareholders annually, to be laid before Parliament. Any existing bank was permitted, on the authority of the shareholders, to apply for an extension of its charter, and the Governor in Council, upon the recommendation of the Minister of Justice and the Treasury Board, was empowered to extend such charter to 1881. Any suspension by a bank of payment of its liabilities for a period of 90 days would constitute insolvency, and operate as a forfeiture of its charter.

In 1871 the first comprehensive Banking Act of the Dominion was passed. A large part of the statute was devoted to the re-enactment and consolidation of legislation already in force, although the measure of 1870 contained the main features of the Government's policy. The procedure relative to extension of charters laid down in the preceding year was superseded by this Act, which became the

charter of the banks until July 1, 1881, that date being set in contemplation of regular decennial revisions. No new bank was permitted to commence business with less than \$500,000 capital *bona fide* subscribed and \$100,000 similarly paid up, with the further proviso that at least \$200,000 must be paid up within two years after commencement of business. The sections respecting loans against warehouse receipts, etc., were thoroughly revised and difficulties of procedure removed. Banks were permitted to take security on commodities in store pending marketing, and also while undergoing conversion from the raw to the finished state. Advances were allowed upon security of shares of other banks. It was provided that the rate of interest or discount charged by a bank should not exceed 7 p.c. and that no higher rate should be recoverable. Monthly returns of assets and liabilities were required. Certain technical amendments were made to the Bank Act in 1872, 1873, and 1875. In 1879 the power to lend upon the security of shares of other banks was repealed.

At the first general revision of the Bank Act in 1880 (effective 1881), a note holder was definitely recognized as a preferred creditor, claims of the Dominion and Provincial Governments, respectively, ranking next in order of preference. Banks were prohibited from issuing notes under \$5, higher denominations to be multiples of this sum. Dominion notes were now to constitute not less than 40 p.c. of the bank's cash reserves. Monthly returns of a more detailed character were to be made. The Act was amended in 1883 to enforce more effectively the prohibitions, restrictions and duties already imposed upon the banks. The use of certain titles by private bankers not operating under the provisions of the Act was prohibited.

At the revision of 1890 (effective 1891), it was stipulated that not less than \$250,000 capital must be paid up before a certificate permitting a bank to commence business could be issued by the Treasury Board. A period of one year from the date of the charter was allowed for the payment of the capital and the carrying out of other preliminaries. Dividends were not to exceed 8 p.c. until or unless the reserve fund was the equivalent of 30 p.c. of the paid-up capital. A fund known as the "Bank Note Circulation Redemption Fund" was established, consisting of deposits made by the banks with the Minister of Finance of amounts equal to 5 p.c. of their average note circulation, such deposits to be subject to adjustment annually, and to constitute a guarantee of the payment of all notes of a suspended bank with interest at 6 p.c. from the date of suspension until the date when their redemption was undertaken by the liquidator. Failing action by the liquidator within two months, the Minister of Finance was authorized to redeem the notes out of the fund, and such outlay, if not made good out of the assets of the failed bank, was to be re-imbursed by the contributing banks *pro rata* to their contributions. Another major change gave the banks, in certain classes of loans, the same legal power to take security over the borrowers' goods as had previously been granted by warehouse receipts. This enactment served to make general and more clear principles already recognized by previous legislation and practice. Directors' qualifications were set out more clearly and it was now provided that a majority only of directors, instead of all, need be British subjects. Penalties for excess note circulation were made more severe.

The revision of 1900 (effective 1901) recognized the Canadian Bankers' Association as an agency in the supervision and control of certain activities of the banks. It was charged, under the Treasury Board, with the responsibility of supervising the printing and distribution of notes to the banks and their issue and destruction; also with control over clearing houses and the appointment of curators to supervise

the affairs of suspended banks. The amended Act also included provisions permitting one bank to sell its assets to another. More detailed monthly returns were required and the interest on notes of failed banks was reduced from 6 p.c. to 5 p.c. In 1908, after the financial crisis of 1907, provision was made for emergency circulation during the crop-moving season from October to January, when banks were allowed to issue excess circulation up to 15 p.c. of their combined paid-up capital and rest or reserve funds, this emergency circulation to be taxed at a rate not exceeding 5 p.c. per annum. In 1912, the period was extended to the six months from September to February inclusive.

At the fourth revision of the Bank Act in 1913 provision was made for an audit of each bank's affairs by auditors appointed by the shareholders. There was also provision for the establishment of Central Gold Reserves in which banks might deposit gold or Dominion notes for the purpose of issuing additional notes of their own there-against. Annual reports to the Minister of the fair market value of real and immovable property held by the banks for their own use were required. Banks were empowered to lend to farmers upon security of their threshed grain. As a war measure the provision for emergency circulation was extended in 1914 to cover the whole year and banks were further authorized to make payments in their own notes instead of in gold or Dominion notes.

The fifth revision of 1923 (13-14 Geo. V, c. 32) resulted in numerous important changes. The qualifications of provisional directors were re-defined, while provision was made for keeping records of attendance at directors' meetings and bringing them to the notice of shareholders. Annual and monthly statements were given further attention and more complete returns required, including statements of controlled companies in the names of which any part of a bank's operations were carried on. Other or special returns were to be made if called for by the Minister. Two auditors were now to be appointed by the shareholders instead of one, and the qualifications, duties and responsibilities of auditors were more clearly defined. The personal liability of directors in case of distribution of profits in excess of legal limits was also more definitely expressed. Regulations regarding loans were amended and advances to any officer or clerk of a bank could not, in any circumstances, exceed \$10,000. Registration of security for loans under Sec. 88 was provided for. It became necessary for guarantee and pension funds to be invested in trustee securities. The punishment of directors and other bank officials for making false statements of a bank's position was provided for in Sec. 153. In 1924, as a result of the failure of the Home Bank of Canada, provision was made for periodical examination of the chartered banks by an Inspector-General of Banks, who was to be an officer of the Department of Finance.

The sixth revision of the Bank Act was postponed from 1933 to 1934 (c. 24), for adaptation to the establishment of the new Bank of Canada, and most of the alterations were to provide for the relations of the chartered banks with the Bank of Canada; these are given on pp. 879-880 in the résumé of the legislation under which the Bank of Canada was set up.

Early Development of Central Bank Institutions.—Some of the features of a central banking system became evident before the establishment of the Bank of Canada, providing more centralized control and flexibility of cash reserves. In chronological order with their origins these were:—

1.—*Central Note Issue*, permanently established with the issue of Dominion notes under legislation of 1868.

2.—*The Canadian Bankers' Association*, established in 1900, and designed to effect greater co-operation among the banks in the issue of notes, in credit control, and in various aspects of bank activities.

3.—*The Central Gold Reserves*, established by the Bank Act of 1913.

4.—*Re-discount Facilities*, although originated as a war measure by the Finance Act of 1914, were made a permanent feature of the system by the Finance Act of 1923, which empowered the Minister of Finance to issue Dominion notes to the banks on the deposit by them of approved securities. This legislation provided the banks with a means of increasing their legal tender cash reserves at will.

Section 2.—The Bank of Canada.

Subsection 1.—The Bank of Canada Act and its Amendment.

Chapter 43 of the Statutes of 1934, "An Act to incorporate the Bank of Canada", provided for the establishment of a central bank in Canada. The capital of the Bank was originally \$5,000,000, divided into shares of \$50 par value. These shares were offered for public subscription by the Minister of Finance on Sept. 17, 1934, and were largely oversubscribed. The maximum allotment to any one individual or corporation was 15 shares. Shares of the Bank may be held only by British subjects ordinarily resident in Canada, or by corporations controlled by British subjects ordinarily resident in Canada. The maximum holding permitted one person is 50 shares. Directors, officers or employees of the chartered banks may not hold shares of the Bank. The Bank commenced business on Mar. 11, 1935.

By an amendment to the Act passed at the 1936 session of Parliament, the capitalization of the Bank was increased to \$10,100,000 by the sale of \$5,100,000 Class "B" shares to the Minister of Finance. The original shareholders are now designated Class "A".

The Bank is authorized to pay cumulative dividends of $4\frac{1}{2}$ p.c. per annum from its profits after making such provision as the Board thinks proper for bad and doubtful debts, depreciation in assets, pension funds and all such matters as are properly provided for by banks. The remainder of the profits will be paid into the Consolidated Revenue Fund of Canada and to the Rest Fund of the Bank, in specified proportions until the Rest Fund is equal to the paid-up capital, when all the remaining profits will be paid into the Consolidated Revenue Fund.

The Bank may buy and sell securities of the Dominion, the provinces, the United Kingdom and the United States of America, without restriction if of a maturity not exceeding two years, and in limited amounts if of longer maturity. It may also buy and sell securities of British Dominions and France without restriction, if maturing within six months. Short-term securities of the Dominion or provinces may be re-discounted. The Bank may buy and sell certain classes of commercial paper of limited currency, and if endorsed by a chartered bank may re-discount such commercial paper. Advances for six-month periods may be made to chartered banks, Quebec Savings Banks, the Dominion or any province against certain classes of collateral, and advances of specified duration may be made to the Dominion or any province in amounts not exceeding a fixed proportion of such government's revenue. The Bank may buy and sell gold, silver, nickel, and bronze coin and gold and silver bullion, and may deal in foreign exchange.

The provisions regarding the note issue of the Bank of Canada are dealt with on pp. 889-890.

The Bank of Canada must maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada. The reserve, in addition to gold, may include silver bullion, balances in pounds sterling in the Bank of England, in United States dollars in the Federal Reserve Bank of New York, and in gold currencies in central banks in gold standard countries or in the Bank for International Settlements, treasury bills of the United Kingdom or the United States of America having a maturity not exceeding three months, and bills of exchange having a maturity not exceeding 90 days, payable in London, New York, or in a gold standard country, less any liabilities of the Bank payable in the currency of the United Kingdom, the United States of America, or a gold standard country.

The chartered banks are required to maintain a reserve of not less than 5 p.c. of their deposit liabilities within Canada in the form of deposits with and notes of the Bank of Canada.

The Bank acts as the fiscal agent of the Dominion of Canada and may, by agreement, act as banker or fiscal agent of any province. The Bank may not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

The head office of the Bank is at Ottawa, and it has an agency in each province, namely, at Charlottetown, Halifax, Saint John, Montreal, Toronto, Winnipeg, Regina, Calgary, and Vancouver.

The Governor of the Bank is its chief executive officer and Chairman of the Board of Directors, and he is assisted by a Deputy Governor and an Assistant Deputy Governor. The first appointments were made by the Government. Subsequent appointments are to be made by the Board of Directors subject to the approval of the Governor in Council.

At the first meeting of the shareholders on Jan. 23, 1935, seven directors were elected for terms to run as follows: one until the third annual general meeting (1938), two until the fourth (1939), two until the fifth (1940), and two until the sixth annual general meeting (1941).

By the 1936 amendment the number of directors elected by the Class "A" shareholders will be eventually reduced to three who will hold office for three-year terms. The six directors appointed by the Class "B" shareholder with the approval of the Governor in Council, were announced on Sept. 11, 1936. These directors are appointed for terms to run as follows: two until the annual general meeting in 1940, two until 1941 and two until 1942. Thereafter the Government directors, each of whom shall hold office for a term of three years, will be appointed by the Class "B" shareholder with the approval of the Governor in Council, two as of the day of the annual general meeting in 1940 and two at the day of each annual general meeting thereafter. In the transaction of the business of the Bank each director has one vote except that prior to the annual general meeting in 1940 each of the directors appointed by the Class "B" shareholder shall be entitled to two votes.

There is also an Executive Committee of the Board of Directors consisting of the Governor, Deputy Governor, and one member of the Board, which must meet once a week. This Committee has the same powers as the Board but every decision is submitted to the Board of Directors at its next meeting. The Board must meet at least four times a year. The Deputy Minister of Finance is an *ex officio* member of the Board of Directors and of the Executive Committee, but is without a vote.

The Governor, or in his absence the Deputy Governor, only has the power to veto any action or decision of the Board of Directors or the Executive Committee, subject to confirmation or disallowance by the Governor in Council.

Subsection 2.—The Bank of Canada and Its Relationship to the Canadian Financial System.

The position which the Bank of Canada occupies in the financial system is one of great importance and one which should be widely and properly understood in these days of increasing public interest in national finance.

It is true that prior to the establishment of a central bank on Mar. 11, 1935, the chartered banks operated satisfactorily in normal times, for considerable periods, almost without control, and that expansion, but *not* contraction, was rendered easy by the Finance Act. Canada has indeed been fortunate in the possession of a strong banking system—ten banks with a large number of branches—as has been demonstrated during the critical years of the depression. But such machinery of control as existed prior to 1935 lagged behind that of most other countries. The student of Canadian banking, however, can recognize certain steps towards the development of a unified control. The excess circulation privilege (the right to issue bank notes during a certain part of the year above the amount of the bank's paid-up capital) was a device adopted in 1908 to enable the banks to meet an important annually recurring seasonal demand for currency. The central gold reserves, authorized in 1913, made it possible for any bank at any time to increase its note issue beyond the amount of its paid-up capital by means of what has been called the "mobilization" of cash reserves. But this system—the deposit of gold or Dominion notes in a central fund in Montreal under the supervision of three trustees—was not really equivalent to the flexibility which a central bank provides. The Finance Act of 1914 (re-enacted in 1923) provided for a method of performing in Canada one important service of a central bank, that of "rediscounting" (or turning into cash) certain paper or securities held by member banks, but the equally important function of contraction was not provided for. The Canadian Bankers' Association may also be said to have assisted in providing a measure of unity that would not otherwise have existed.

Functions of the Bank of Canada.—The preamble to the Bank of Canada Act says that the Bank is "to regulate credit and currency in the best interests of the economic life of the nation, . . . to mitigate . . . fluctuations in the general level of production, trade, prices and employment, so far as may be possible within the scope of monetary action, and generally to promote the economic and financial welfare of the Dominion". The qualification is important.

There are, of course, limitations to what a central bank can do as will be seen later; nevertheless, a central bank can undoubtedly have a most important and beneficial influence in many ways. In the enormous complexity of modern economic life, there is a number of things which can be more or less exactly measured and a number of things which cannot be measured. There may be a tendency to think that those influences which can be measured must be the controlling ones, such as the volume of deposits and cash reserves and changes in interest rates, etc. This is not necessarily the case.

The first main function, *viz.*, that of regulation of credit and currency, is really the distinguishing feature of a central bank, and the other functions are for the most part resultants of the first, combined with such influence as the Bank can bring to bear by means of impartial and skilled advice.

The Mechanism by which the Control is Exercised.—How does a central bank exercise this power of regulation and control? It attains this power by being the bankers' bank. (It is also the Government's bank, and this fact may assist the Bank's control from time to time.)

It is the duty of the Bank of Canada to exercise a regulative influence over the total volume of purchasing media in the country, and this is done through the medium of the commercial banks, whose reserves, which the central bank controls directly, consist of their balances with the Bank of Canada or of Bank of Canada notes. The method of control is either through what are known as "open-market" operations, or by changes in the bank rate, or both.

Commercial banks are accustomed to keep a certain proportion of cash as reserves against their deposit liabilities. In Canada, speaking of the banks as a whole, that proportion at present is about ten per cent and by law must be at least five per cent. The banks have the power to vary their cash proportion, as they wish, down to five per cent, but this does not matter very much from a control point of view because pronounced variations are infrequent and the central bank will have a good idea of what to expect.

The central bank can expand or contract these collective reserves at will, always provided that it can buy and sell securities or other suitable assets when it wants to. It is the buying and selling of securities for this purpose that are commonly known as "open-market" operations. Suppose, for example, that the central bank buys two million dollars worth of securities; then no matter from whom it buys these securities, the reserves of the combined chartered banks will rise by that amount; for if it buys from a commercial bank or banks their accounts at the central bank will be credited and those accounts are part of their reserves, and if it buys from someone not a bank then that seller pays the money into his account with some bank and it swells that bank's reserves at the central bank when the cheque is presented by it to be paid by the central bank. Obviously, if each commercial bank has some proportion at which it thinks it should maintain its reserves, the bank or banks which eventually are credited with the additional cash, finding themselves with their proportions increased, will wish to reduce them again. Otherwise they are losing an opportunity of increasing their earnings. Consequently, although they are not obliged to expand, they will usually take steps to increase their own assets and deposit liabilities by amounts sufficient to reduce their cash proportion to near the customary level again. As has been said, the average of that level is at present approximately ten per cent and, in the case of the purchase of the two million dollars worth of securities above mentioned, they would seek to expand their assets and deposits by approximately twenty million dollars. Thus it is that an operation by a central bank tends to have *ten times* the effect on total purchasing media that an operation by a commercial bank has. If the banks can find good borrowers, *i.e.*, if the character of the borrowers, and the purposes for which they want the funds, are satisfactory, the commercial banks will be glad to assume the deposit liabilities contingent on making advances of an additional twenty million dollars in the case given, since this is the most profitable way of employing their money. Otherwise they may buy investments, which will usually earn them a lower return (but perhaps at less risk) or they may expand partly in the one way and partly the other. Either method will increase their collective deposits *pari passu*. Moreover, they will all expand more or less in proportion to their relative size, otherwise some will lose cash reserves to others and find their proportions dropping too low. They tend to move together, maintaining the existing relationship at a higher level, through their own actions and those of their depositors. Conversely, if the central bank sells securities, or contracts its advances and discounts, there will be a corresponding fall in the cash of the banks, a reduction of the collective cash proportion and the eventual need for a collective contraction of deposits. Where the market for government securities,

treasury bills and commercial bills is undeveloped, a central bank must do what it can to develop such a market so that it may be sure of being able freely to buy and sell the kind of assets it is allowed to hold in the volume requisite for control. Control can also be assisted by buying and selling gold and foreign exchange. In the case of Canada, operations in foreign exchange are limited by the Bank of Canada Act, and of course all central banks have to take into consideration the stability of any currencies they may be permitted to hold.

Though their action is more indirect, changes in the bank rate have a similar effect, especially where there is a well-developed market sensitive to such changes and where it is the custom of the commercial banks to alter their rates when the central bank alters its own. High rates tend to contract business enterprise and low rates tend toward expansion. But, if a country is on the gold standard, high rates tend to attract gold and low rates to encourage its outflow, thus providing some limitations on contraction and expansion, and normally causing the requisite adjustment to take place more automatically.

Expansion and Contraction of Credit.—As pointed out, the deposits of the commercial banks should vary more or less in accordance with the Bank of Canada's operations, the variations being about ten times as great as the variations in the cash basis.

A central bank creates *cash* when it increases its assets and therefore also the bankers' balances which it holds. The commercial banks create *credit*. They cause deposit liabilities to come into existence by making advances and buying securities, etc. Of course none of the "creations" mentioned takes place without co-operation. Co-operation in the case of advances is clearly seen to be necessary. Again it may be easy to buy and sell bills and securities, but even so there must be two parties to the transaction. In any case, of course, the central bank cannot control the *direction* in which new credit is extended any more than it controls the choice of assets to be liquidated when contraction takes place. That function is in the hands of the commercial banks and other financial institutions, although the central bank may conceivably be able to *influence* such use indirectly. Still less can it control the use made of credit by the public. Once undesirable use of credit is made to any important extent, in excessive speculation for instance, the central bank may be able to exercise control only by contraction, which might affect other and more legitimate uses of credit as well. Again, a central bank may create additional cash and the commercial banks may follow the lead given them and expand deposit liabilities by an amount ten times as great, but additional purchases and sales of goods or services may not follow. The money may not be spent by the owners of the deposits. Of course, if additional advances are made, one can be sure that the borrower will use the money, but for a long time expansion may not take that form during a depression. When it does, it may be a sign that the depression is nearly over. If securities are bought, the seller may keep his money unspent until some favourable opportunity occurs for its investment, or its expenditure in some other way. At the bottom of a major business depression, the prevailing lack of confidence may make any expansion undertaken by a central bank slow in bringing about a revival by increased spending. Moreover, an excessive creation of cash with a view to hastening recovery may lead to the central bank losing control if and when such action begins to take its effect. The turnover of deposits may then become too rapid. For it is the rapidity of movement of deposits (and notes)—the "velocity of circulation"—which is the important factor—the National Income, not the amount of money in existence. This velocity, unless an inflationary expansion has taken place, is much more responsive to control

in the early stages of the upward movement of the business cycle than during its downward phases or at the bottom of a depression. Incidentally, if the habits of the people are unchanged, the volume and rate of turnover of notes circulating is fairly closely related to the volume and rate of turnover of the deposits. The total deposits of commercial banks in various countries are, during a depression, often as great as or greater than in a boom period, but their velocity will be very different. The deposits in the English banks, for example, at June 30 in 1929 were £1,861,000,000; at the bottom of the depression in 1932 they were £1,813,700,000, and in 1935 they were £2,044,800,000 or actually £183,800,000 greater than 1929.* In Canada the average deposits of the chartered banks in 1929 were about the same as in the spring of 1936, but their turnover in 1929 was very much higher. The national income of Canada was about \$5,690,000,000 in 1929 and in 1934 only about \$3,613,000,000, though this was an improvement on some of the intermediate years. This reduction in national income is what would be expected in the light of the fall in turnover since 1929.

But while an easy money policy may not easily promote spending, it will cause a fall in the rates of interest, assisting the refunding of fixed interest obligations on favourable terms and the flotation of new capital issues. This is often its most important result.

Mitigation of General Economic Fluctuations.—Thus the ability of the central bank to appraise the economic situation and to act at the proper time is important, especially by way of seeking prevention rather than cure. The fluctuations which the central bank has to mitigate are not only cyclical, they may also be seasonal and secular. It should always try to offset the seasonal fluctuations, for these are of short duration and their elimination or modification should present no difficulty if the normal mechanism of open-market operations is functioning.

Secular fluctuations, due to increase in population, production and trade, over a long period of time, are difficult to distinguish, but require attention. Seasonal and cyclical movements may call for opposite treatments, in which case the central bank will take care of the net effect it wishes to produce.

It is most important that the central bank should not act too early or too late on the cycle. It will not wish to stop a business revival, but, equally, it must not let it get out of hand. In order to know when to act and to what extent, the bank must constantly watch carefully all barometers of economic activity—foreign trade, employment, production, capital movements, etc. The more skilful and well-timed the Bank's operations are, the less jarring their effect on the economic system will be. In a depression, the central bank lays the foundation for economic expansion by making money cheap and plentiful, within the limits of safety.

Control Over Exchange Operations.—The Canadian dollar is at present off gold and unstabilized, and no statutory duty has yet been laid upon the Bank to maintain the exchange at any particular rate or level. On the gold standard, or any other standard, such maintenance is, of course, a primary duty of the central bank and it defends the exchange mainly by the same weapons which it uses for internal purposes, having, it may be, foreign exchange assets to help it. As the Royal Commission on Banking and Currency in Canada pointed out (p. 63, paragraph 208 of the official report), "Whatever additional influences may affect the level of exchange, . . . the long-term factor of decisive importance is the credit structure of

* Figures of deposits of English banks given here are from the Banking Supplement of *The Economist* for Oct. 12, 1935, and include undivided profits, etc.

the country . . ."; hence the Bank of Canada's actions must and do indirectly influence the external value of the Canadian dollar.

Advisory Function of the Bank and its Duty as the Government's Banker.—Apart from the foregoing functions, the Bank of Canada fulfils another main purpose—that of acting as the Dominion Government's banker and advisor, of issuing its securities, etc.; and it has the power to act in a similar capacity to the Provincial Governments. Expert and impartial advice is perhaps the chief form of assistance which the Bank can render directly to the Governments of Canada, and the close and intimate internal and external contacts which it must maintain, the key position it holds in the banking structure of the country, the experience which it builds up, its power to form a relationship with other central banks, its close association with the knowledge of the field of international banking, and the fact that it is a non-profit-making institution and has no sectional interests to serve, should combine to equip the Bank for the performance of this important function.

Subsection 3.—Bank of Canada Operations.

The operations of the Bank of Canada, as shown by the liabilities and assets statement as at Mar. 13, 1935, and Dec. 31, 1935 and 1936, are shown in Table 1.

The chart given below showing Bank of Canada assets and liabilities covers the short period since the Bank was established, but illustrates the relationship between the central bank's balance sheet and chartered bank cash reserves. The expansion of Bank of Canada assets and liabilities has provided for increased Bank of Canada notes in active circulation as the chartered bank-note issue is limited and gradually retired under Bank Act regulations, and somewhat enlarged the cash reserves of the chartered banks. The principal changes in Bank of Canada assets have been those due to revaluation of gold holdings required by the Exchange Fund Act of July, 1935, and the rise in investments, variations in which have been due in part to seasonal variations in cash reserves and active note circulation.

Section 3.—Currency.

Subsection 1.—Canadian Coinage.

The present standard of Canada is gold of 900 millesimal fineness (23·22 grains equal to one dollar). As pointed out on p. 876 gold coin has been authorized but only very limited issues were ever made. The British sovereign and half sovereign, and United States eagle, half eagle, and double eagle, are legal tender. Subsidiary coin consists of 50, 25 and 10 cent silver pieces,* 800 fine (reduced from 925 fine in 1920). Such subsidiary silver coin is legal tender to the amount of ten dollars. The 5-cent piece (now made of nickel) is legal tender up to five dollars and the 1-cent bronze coin up to twenty-five cents. There is no provision for the redemption of subsidiary coin. Table 2 gives statistics of Canadian Coinage, and Table 3 shows the coins in circulation at the end of each year from 1926 to 1936.

* The Currency Act of 1910 made provision for a silver dollar and a 5-cent silver coin. The former was not coined until 1935, when a limited issue was made as a jubilee coin. The 5-cent silver coin was coined freely until 1921. It still has limited legal tender but has been replaced in the coinage by the 5-cent nickel piece.

¹ Nickel coins were first issued in 1922.

The Royal Canadian Mint.—The Ottawa Mint, established as a branch of the Royal Mint under the (Imperial) Coinage Act, 1870, and opened on Jan. 2, 1908, was by 21-22 Geo. V, c. 48, constituted a branch of the Department of Finance, and by the Proclamation of Nov. 14, 1931, issued under Section 3 of that Act, it has since Dec. 1, 1931, operated as the Royal Canadian Mint. At first the British North American provinces, and later the Dominion of Canada, obtained their coins from the Royal Mint in London or from The Mint, Birmingham, Ltd., and in its earlier years the operations of the Mint in Canada were confined to the production of gold, silver, and bronze coins for domestic circulation, of British sovereigns, and of small coins struck under contract for Newfoundland and Jamaica. Previous to 1914 small quantities of gold bullion were refined, but during the War the Mint came to the assistance of the British Government by establishing a refinery in which nearly twenty million ounces of South African gold were treated on account of the Bank of England, and the subsequent great development of the gold-mining industry in Canada has resulted in gold-refining becoming one of the principal activities of the Mint. Gold coins have not been struck since 1919, most of the fine gold produced from the rough shipments from the mines being delivered to the Department of Finance or, since Mar. 11, 1935, to the Bank of Canada in the form of bars of approximately 400 fine oz. each, the rest being sold in a convenient form to manufacturers. The fine silver extracted from the rough gold, when not required for coinage, is sold in New York or disposed of to local manufacturing firms.

Subsection 2.—Dominion and Bank of Canada Notes.

Dominion Notes.—It has been explained in the historical outline at the beginning of this chapter that Dominion notes became established in 1868. The

legislation by which the issue was expanded with the growth of the country was given in a footnote on p. 952 of the 1934-35 Year Book.

Prior to the taking over of the note issue by the Bank of Canada when it opened on Mar. 11, 1935, Dominion notes were issued under any one of three statutory authorities: (1) the Dominion Notes Act (Statutes of 1934, c. 34), which required a gold reserve of 25 p.c. to be held against the first \$120,000,000 of notes issued and full gold coverage against any issue in excess of \$120,000,000; (2) the Finance Act (R.S.C. 1927, c. 70), Part II of which authorized the Minister of Finance to advance to any chartered bank or to the savings banks of Quebec, Dominion notes to any amount on the pledge of approved securities deposited with the Minister. These advances bore interest and no gold coverage was required to be held on Dominion notes so advanced; (3) Chap. 4 of the Statutes of 1915, authorizing the Government to issue Dominion notes to the amount of \$26,000,000 without gold coverage, but partly covered by the deposit of \$16,000,000 of railway securities guaranteed by the Dominion Government.

The Dominion note issue was therefore partly gold-backed and partly fiduciary. Dominion notes were legal tender and, in normal times when Canada was on the gold standard, they were redeemable in gold.

Dominion notes were of two types, those for the purpose of general circulation, and "special" notes. The latter were used only by the banks for inter-bank transactions and clearings, or for cash reserves or deposit in the Central Gold Reserves. They were mainly of \$5,000 and \$50,000 denominations. Dominion notes for the purpose of general circulation were of the denominations of 25 cents, \$1, \$2, \$4, \$5, \$50, \$500 and \$1,000, although for a considerable time no \$4, or \$50 notes had been issued. Since the minimum denomination for chartered bank notes was set at \$5, Dominion notes of lower denominations naturally were largely in circulation among the general public, but there was nothing to prevent any of these Dominion notes from being included in the reserves of the banks, and it was provided that at least 40 p.c. of the banks' reserves were to consist of Dominion notes.

Bank of Canada Notes.—The Bank of Canada, when it commenced operations, assumed the liability for Dominion notes outstanding, which were replaced in public circulation, and partly replaced as cash reserves, by its own legal-tender notes in denominations of \$1, \$2, \$5, \$10, \$20, \$50, \$100 and \$1,000. Deposits of chartered banks at the Bank of Canada completed the replacement of Dominion notes as cash reserves.

The chartered banks were required under the Bank Act of 1934 to reduce the issue of their own bank notes gradually during the following ten years to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes are thus replacing chartered bank notes as the issue of the latter is reduced.

In Table 5 are shown the denominations of Dominion or Bank of Canada notes in circulation in 1926, 1929, 1932, and in the three latest years. In the denominations under \$5, which have, for many years, been used for general circulation, there has been little change. In the denominations from \$5 to \$1,000, where Bank of Canada notes have partially replaced chartered bank notes or Dominion notes, there has been a large increase. On the other hand, the special Dominion notes in denominations from \$1,000 to \$50,000 which were used almost exclusively for inter-bank transactions or bank reserves, are no longer in use.

5.—Denominations of Dominion or Bank of Canada Notes in Circulation, 1926, 1929, 1932, and 1934-36.

Subsection 3.—Chartered Bank Notes.

By reference to the historical outline at the beginning of this chapter, the developments may be traced by which bank notes became the chief circulating medium in Canada in the period preceding the establishment of the Bank of Canada. The main steps of this development which remained as permanent features of the system are assembled and emphasized here. By the Bank Act of 1870 (later consolidated with the general Bank Act of 1871), the note issue of a bank was not to exceed its paid-up capital, no bank notes were to be issued under \$4 in value (later changed to \$5 and multiples thereof), and, while the banks were allowed to use their own discretion regarding the amount of their cash reserves, it was stipulated that at least one-third (later increased to 40 p.c.) of such cash reserves as they chose to carry should consist of Dominion notes. In the revision of 1880, a note-holder was definitely recognized as a preferred creditor. The Bank Act of 1890 provided for the Bank Note Circulation Redemption Fund, made up by each bank depositing with the Minister of Finance an amount equal to 5 p.c. of its note circulation. As a result of the operation of this fund and of making notes a prior lien against the assets of

failed banks, no bank-note holder in Canada has suffered a loss since 1881. In 1908, after the financial crisis of 1907, provision was made for the banks to issue, during the crop-moving season, October to January inclusive (later extended to September to February inclusive), an excess circulation up to 15 p.c. of their combined capital and "rest" or reserve funds, such excess to be taxed at a rate not exceeding 5 p.c. per annum. The revision of the Bank Act in 1913 provided for the establishment of Central Gold Reserves in which banks might deposit gold or Dominion notes and issue additional notes of their own there-against. The Finance Act (c. 3) of 1914, gave the Minister of Finance authority to issue Dominion notes to the banks against approved securities deposited with him. Originally passed as a war measure, this was made a permanent feature of the system by the Finance Act (c. 48) of 1923, and provided the banks with the means of further expanding their note issue by the deposit of the Dominion notes, so obtained, in the Central Gold Reserves.

Bank notes, although forming the chief circulating medium in the hands of the public, were a fiduciary issue; they were not legal tender but were convertible into Dominion notes which were legal tender.

The provisions regarding bank notes were materially changed with the establishment of the Bank of Canada under the Bank Act (c. 24) of 1934. The authority both for seasonal expansion and for additional issue secured by deposit in the Central Gold Reserves was then terminated. Provision was made for a gradual reduction in bank note circulation over a period of years as explained on p. 889. As a result of these changes, current data on bank-note circulation are not comparable with those of earlier years. However, statistics of total notes in the hands of the general public are comparable. This public circulation includes chartered bank notes together with Dominion notes and Bank of Canada notes, exclusive of those held by the banks as reserves. Statistics upon this basis are shown in Table 6.

6.—Note Circulation in the Hands of the Public, 1926-36.

¹ Gross note circulation of chartered banks.

² Total issue less notes held by chartered banks and notes deposited in the Central Gold Reserves up to March, 1935.

³ Annual averages of daily figures supplied by the Bank of Canada.

Section 4.—Monetary Reserves.

Subsection 1.—Bank of Canada Reserves.

In the 1936 edition of the Year Book, the composition of Canadian Gold Reserves held by the Government was presented for the years 1905 to 1934, in Table 3, p. 895. Since March, 1935, the gold reserves have been held by the Bank of Canada. By authority of the Exchange Fund Act (c. 60, 1937), effective in July, 1935, they are to be valued at the prevailing current market price of gold. The effect of the revaluation as from the above date is shown in the chart on p. 886. The new data are now to be found under the item "Reserves" on the "Assets" side of Table 1, p. 885.

Subsection 2.—Chartered Bank Canadian Cash Reserves.

Before the Establishment of the Bank of Canada.—Up to March, 1935, legal tender cash reserves in Canada were made up partly of Dominion notes (see pp. 888-889), and partly of gold coin and bullion, and subsidiary coin, including these forms of cash held by the banks themselves and as deposits in the Central Gold Reserves. Insofar as these reserves were in actual gold or were in Dominion notes backed by gold, they were subject to the expanding or contracting influences of monetary gold imports or exports arising from Canada's balance of international payments, so long as Canada was on the gold standard.

Since the Establishment of the Bank of Canada.—When the Bank of Canada was established, the chartered banks turned over their reserves of gold in Canada and Dominion notes to the new bank in exchange for deposits with and notes of the Bank of Canada. It was provided that henceforth the chartered banks were to carry reserves in these forms amounting to at least 5 p.c. of their deposit liabilities in Canada. Since that time, therefore, the gold reserves against currency and bank credit have been in the custody of the central bank.

The cash reserves shown in Table 7, include, prior to Mar. 11, 1935, the gold and coin and Dominion notes held by the banks in Canada and the deposits in the Central Gold Reserves not ear-marked against the issue of bank notes, and, since the above date, notes of and deposits with the Bank of Canada.

Section 5.—Commercial Banking.

Subsection 1.—Historical.

Since one of the chief functions of the early banks in Canada was to issue notes to provide a convenient currency or circulating medium, it has been expedient to cover both currency and banking in the one historical sketch which will be found on pp. 873-879. However, the function of note issue is no longer as important as it was. Latterly, the services of the chartered banks in gathering deposits from innumerable sources have emphasized the importance of deposit banking by which the savings of the people are put to immediate productive and commercial use; with the development of commercial banking, other necessary commercial banking facilities have been given more importance. Included among these is the mechanism of bills of exchange by which foreign trade is financed. The principal features of this development of commercial banking facilities in the evolution of the Canadian banking system may be summarized as follows: (1) its origin, closely related to the Montreal produce and export trade and to the commerce of Halifax and Saint John; (2) the development of the branch bank system in order to meet the demands of a rapidly moving frontier of settlement; (3) the adaptation to the requirements of the grain and cattle trade of the west; and (4) the consolidation during later years of the features which tended towards its early success. The development of a stable system has been accompanied by failures, particularly marked about the middle of the 19th century, but progress has nevertheless been steady, based on sound principles, and adapted as closely as could be to the particular needs of the country.

The branch bank is perhaps the most distinctive feature of the Canadian system as it exists to-day, and for a country such as Canada, vast in area and with a small population, the plan has proved a good one. A result of the growth of branch banks was the development of a partially centralized system—centralized as to banks, of which there are now ten, rather than as to districts as in the partially centralized system of the United States. There were 28 chartered banks in existence at Confederation. The elimination of weaker banks or their amalgamation with more stable institutions has been a progressive move towards greater security and confidence. The banks at Confederation were as follows:—

Ontario and Quebec.

Bank of Montreal.
Quebec Bank.
Commercial Bank of Canada.
City Bank.
Gore Bank.
Bank of British North America.
Banque du Peuple.
Niagara District Bank.
Molson's Bank.
Bank of Toronto.
Ontario Bank.
Eastern Townships Bank.
Banque Nationale.
Banque Jacques-Cartier.
Merchants' Bank of Canada.
Royal Canadian Bank.

Union Bank of Lower Canada.
Mechanics' Bank.
Canadian Bank of Commerce.

Nova Scotia.

Bank of Yarmouth.
Merchants' Bank of Halifax.
People's Bank of Halifax.
Union Bank of Halifax.
Bank of Nova Scotia.

New Brunswick.

Bank of New Brunswick.
Commercial Bank of New Brunswick.
St. Stephen's Bank.
People's Bank of New Brunswick.

Tables 8 and 9 show, respectively, the insolvencies and amalgamations since 1867.

8.—Bank Insolvencies

NOTE.—No bank that has failed since 1895 has paid anything to shareholders in respect of their capital investment. There is no reliable information as to earlier dates. Information is not available from which to compute losses with respect to liabilities other than deposits and circulation. In some instances these liabilities would include liabilities to Governments (having preference) and to banks and others. Noteholders have experienced no losses whatever since the inauguration of the Bank Circulation Redemption Fund in 1890 or, in fact, since the failure of the Bank of Prince Edward Island in 1881. The amount of double liability actually collected from shareholders of the banks which latterly became insolvent was as follows:—

Name of Bank and Place of Chief Office.	Number of Branches when Operations Ceased.	Date of Charter.	Date of Suspension or Cessation of Normal Operations.	Capital Stock at Date of Suspension.

¹ The purchasing banks named in the latter part of the table are no longer in business.² Dates given since 1900 are those of the Orders in Council authorizing the absorptions.³ The Banque d'Hochelaga after absorbing the Banque Nationale adopted the name Banque Canadienne Nationale.

(Footnotes to Table 8 continued.)—

³ This bank did not suspend payment, but when difficulties were encountered an arrangement was made whereby all liabilities were taken over by the Bank of Montreal which, with certain other banks, assumed responsibility for any loss which might result after realization of assets and double liability of shareholders. Depositors and other creditors accordingly experienced neither loss nor delay. By winding-up order of Sept. 29, 1908, the bank was placed in liquidation and shareholders proceeded against for double liability, in respect of which \$1,202,510 was collected but \$601,534 of that amount subsequently returned. Winding-up proceedings terminated in January, 1918.

⁴ This bank did not suspend payment. By agreement, certain other banks took over its various branches and assumed all of its liabilities; accordingly depositors and other creditors experienced neither loss nor delay. In 1911, when the assisting banks threatened to place the bank in liquidation for the purpose of enforcing payment of double liability of shareholders, a corporation, named International Assets Limited, was formed, which assumed all liabilities to the assisting banks and took over the assets of the Sovereign Bank, upon which bonds were issued to the assisting banks for the amount owing them. Numerous shareholders of the Sovereign Bank subscribed to preference shares in the corporation and to the extent that they did so were released from their double liability on shares of the Sovereign Bank; as a result, in excess of \$2,000,000 was collected and paid over to the assisting banks. On Jan. 27, 1914, after it became apparent that a number of shareholders would not subscribe, or pay their double liability voluntarily, the Sovereign Bank (at a time when International Assets Limited was its sole creditor) was placed in liquidation.

⁵ In addition to realization of general assets, the President of this bank advanced sufficient to permit of all liabilities being paid in full without resort to the double liability of the shareholders.

⁶ A Royal Commission inquired into the failure of this bank in 1912 and its report, together with the evidence adduced at the inquiry, are matters of public record.

(Footnotes concluded at foot of p. 897.)

Subsection 2.—Combined Statistics of Chartered Banks.

In Table 10 are given summary statistics of Canadian banking business since Confederation. In order to afford a clear view of the nature of banking transactions in Canada, bank liabilities have been classified in two main groups, liabilities to shareholders and liabilities to the public, only the latter group is ordinarily considered when determining the financial position of any such institution. Assets are divided into four groups, 'other assets' being included in the total. As of interest to students of banking practice, the relative rates of increase of capital and reserve funds may be noted, also the great increase in the proportion of liabilities to the public to total liabilities, and the gradually increasing percentage of liabilities to the public to total assets. The accompanying chart of ownership division of total assets is of interest in this connection. The declining proportion of notes in circulation to total liabilities to the public is also characteristic of the evolution of banking in recent times. Holdings of Dominion and Provincial Government and municipal securities were relatively insignificant prior to the Great War.

PERCENTAGE DISTRIBUTION OF THE TOTAL ASSETS
OF THE
CHARTERED BANKS, 1867-1936

(Footnotes to Table 8 concluded.)

⁷ As indicated, the liability to noteholders has been fully provided for. A preferred claim of the Province of British Columbia for approximately \$103,000 was settled for \$65,000, subject to the proviso that the province might rank with ordinary creditors for the balance if or when such creditors had received a dividend of 25 p.c. The assets, however, realized only sufficient to pay a first and final dividend to depositors and other ordinary creditors of 7½ p.c. and after allowing for set-offs, etc., the liquidator estimated the loss to such creditors at \$279,000 plus the loss to the province of British Columbia of \$38,000, or a total of \$317,000.

⁸ Interim dividend of 25 p.c. paid by the liquidator in December, 1923, and he anticipated that by conserving the assets a further distribution of possibly 10 to 12 p.c. might be made eventually. Depressed conditions naturally affected the process of liquidation and the amount of the further dividend, if any, will depend entirely on future developments. The Government of Canada, pursuant to investigation by a Royal Commission into the responsibility for and causes of the failure, granted relief to the extent of 35 p.c. of the claims of certain classes of creditors, namely, all those individuals with claims of less than \$500 as well as those with larger claims who were found upon due inquiry to be in special need or straitened circumstances as a result of the failure. This involved a total outlay of approximately \$3,460,000.

¹ Daily average Canadian cash to Canadian deposits; figures supplied by the Bank of Canada.

Classification of Deposits and Loans.—As a result of an amendment to the Bank Act in 1934 deposits and loans are required to be classified according to size of the deposit, or purpose of the loan, each year. The figures cover deposits and loans in Canada only.

14.—Classification of Deposits, According to Size, in Chartered Banks in Canada, as at Oct. 31, 1934-36.

Clearing-House Transactions.—In advanced industrial societies money is only "the small change of commerce". The great bulk of monetary transfers, particularly in the case of the larger transactions, is made through the banks. Thus it has been estimated that in the United States in 1917 about 6 p.c. of the business transactions of the country were financed by the use of money and the remaining 94 p.c. by the use of cheques. Accordingly, if we knew the aggregate amount of the cheques paid through the banks and charged to accounts, we should have an almost complete record of the volume of business transacted, and thus of the business activity of the country.

Statistics of this character were at first secured through the operation of the clearing houses—places where the representatives of all the banks met daily in the leading cities and presented for payment the notes of other banks and the cheques drawn upon other banks that had been paid in to their institutions in the regular course of business. In Canada, the first clearing houses to be established were those of Halifax (1887), Montreal (1889), Toronto (1891), Hamilton (1891), and Winnipeg (1893), and the number has subsequently increased to 32.

For the purpose of the Central Clearing Settlement, each bank maintains in its account with the Bank of Canada, Ottawa, a balance (in excess of whatever deposit is maintained as part of the 5 p.c. reserve against deposit liabilities in Canada required by statute) deemed sufficient to settle its clearing obligations. Montreal, Ottawa, Toronto, Winnipeg, and Vancouver are settlement points for the clearing houses in their respective zones. The debit or credit balances of the banks at the specified points are daily communicated by the clearing-house manager, and confirmed by the respective bank, to the local Agent of the Bank of Canada (to the Bank of Canada in the case of Ottawa) for transmission to the Bank of Canada at Ottawa by telephone or telegraph, which bank on the same day debits or credits, as the case may be, the account of the respective bank maintained with the Bank of Canada. By this means practically all the banking transactions of the country are adjusted daily in Ottawa in the accounts maintained by the banks with the Bank of Canada.

Table 16 shows for the years 1932-36 the total volume of clearings in the clearing houses of Canada. These figures, it may be added, represent not only actual city clearings but exchanges between numerous rural branches in each district.

16.—Amounts of Exchanges of the Clearing Houses of Chartered Banks in Canada for the calendar years 1932-36.

NOTE.—For the years 1919-23, see p. 806 of the 1924 Year Book; for 1924-28, p. 859 of the 1929 Year Book; and for 1929-32, p. 911 of the 1933 Year Book.

Bank Debits.—As the number of separate banks has in recent years been steadily diminishing through amalgamations (see pp. 893 to 896), there being only 10 in December, 1936,* as compared with 18 in 1923, inter-bank transactions are a steadily decreasing proportion of total business transacted, and bank clearings have ceased to be a satisfactory measure of general business. The Canadian Bankers' Association agreed to secure from January, 1924, the monthly aggregate figures of the amount of cheques charged to accounts at all banking offices situated in the clearing-house centres of Canada, and monthly and annual figures of cheques charged to accounts (bank debits) have been published since that time by the Dominion Bureau of Statistics. Further, in order that an estimate might be made of the proportion of banking transactions outside the clearing-house cities to the total, the Canadian Bankers' Association secured for the month of January, 1935, the grand total of all cheques charged to accounts at all branch banks throughout the Dominion. The results were published in the Bureau's Monthly Review of Bank Debits for February, 1935, and showed that the aggregate of transactions outside the clearing-house cities was in January, 1935, 12½ p.c. of the grand total in the clearing-house cities. The corresponding figures in the five economic areas were as follows: Maritime Provinces 104.2 p.c., Quebec 6.9 p.c., Ontario 13.5, Prairie Provinces 8.4 p.c., British Columbia 16.7 p.c. Only in the Maritime Provinces does the total of bank debits in clearing-house cities appear to represent inadequately the grand total of business transactions throughout the whole area.

* Barclays Bank, established in 1929, was the latest addition to the commercial chartered banks in Canada; the number has remained at 10 since 1931.

17.—Bank Debits at the Clearing-House Centres of Canada, by Individual Centres, calendar years, 1932-36.

NOTE.—For the years 1924-28, see pp. 860-861 of the 1929 Year Book; and for 1929-32, p. 912 of the 1933 Year Book.

Subsection 3.—Statistics of Individual Chartered Banks.*

Assets and Liabilities.—Tables 18 and 19 show, respectively, the principal and total assets and liabilities of the individual banks at the end of the two latest years. A comparison of the items in these tables with those of Tables 11 and 12, where the combined assets and liabilities of the banks are shown in greater detail, may aid in their interpretation, although this difference should be borne in mind that the combined figures are month-end averages, whereas these tables merely give the position of the banks at the end of the year.

* Revised by A. D. Rogers, Secretary, Canadian Bankers' Association.

Earnings of Canadian Banks.—The chartered banks of Canada are for the most part Dominion-wide institutions, doing business in all parts of the country. Their earnings, therefore, reflect with very considerable faithfulness the fluctuations of general business. So far as individual banks are concerned, the changes resulting from amalgamations are apt to render the figures incomparable over a period of years. During the six years covered by Table 20, however, only one bank, the Imperial Bank of Canada, has absorbed another bank, *viz.*, the Weyburn Security Bank, on May 1, 1931.

20.—Net Profits of Canadian Banks and Rates of Dividend Paid, for their business years ended 1931-36.

NOTE.—These figures are not strictly comparable owing to variations from year to year in the practices of individual banks, and between banks, in deducting taxes. With the exception of La Banque Provinciale du Canada, the profits for 1936 are shown after deducting Dominion and Provincial Government taxes.

¹ This bank, which opened in September, 1929, had reported no profits or dividends up to the end of 1936. ² This bank paid at the rate of 10 p.c. per annum for the first half-year and 8 p.c. for the second.

Branches of Chartered Banks.—During the period from 1881 to 1901, the number of chartered banks doing business in Canada under the Bank Act remained almost the same, 36 in 1881 and 1891, and 34 in 1901, but during the present century there has been in banking, as in industry, an era of amalgamations, the number of banks having dropped to 25 in 1913 and to 10 in 1931. That this has been far from involving a curtailment of banking facilities is seen in Table 10, which shows the development of the banking business since 1867, and in Table 21, which compares

the number of branch banks existing in Canada at different periods, and shows a growth from 123 at Confederation to 4,083 inclusive of sub-agencies at Dec. 31, 1930. Since then, owing to the shrinkage in commercial activities as a result of the depression, some unprofitable branches have been closed and the total has declined to 3,398, exclusive of 147 branches and agencies in other countries, as at Dec. 31, 1936.

Table 22 gives the numbers of branches of the various banks, by provinces, as at Dec. 31, 1936, while Table 23 contains the statistics of branches of Canadian banks doing business outside of Canada, an extension of Canadian banking (more especially to Newfoundland and the West Indies) which proceeded very rapidly in the war and early post-war period, rising to a total of 206 in 1921. Since then this number has gradually declined to 147 branches and sub-agencies in 1936.

Section 6.—Government and other Savings Banks.

In a comparatively new country where capital is relatively scarce, it is a natural thing that the banks which finance the business institutions should also absorb the bulk of the people's savings for use in promoting the business of the country. Thus in Canada the great bulk of the current savings of the people is found in the savings or notice deposits of the Canadian chartered banks, the annual average figures of which are given for recent years in Table 10 of this chapter, the 1936 average being \$1,518,216,945. Further, the current savings of the Canadian people are going very largely into the purchase of life insurance, the total premiums paid in the single year 1935 aggregating \$207,160,622. In comparison with the enormous figures of notice deposits in chartered banks and with total insurance in force, the deposits in the special savings banks are comparatively small, but are none the less significant.

There are three distinct types of savings banks in Canada at the present time, in addition to the savings departments of the chartered banks and of trust and loan companies. First, there is the Post Office Savings Bank, the deposits in which are a direct obligation of the Dominion Government. Secondly, there are Provincial Government savings banking institutions in Ontario and in Alberta, where the depositor becomes a direct creditor of the province. Thirdly, there are in the province of Quebec two important savings banks, the Montreal City and District Savings Bank and the Caisse d'Economie de Notre-Dame de Québec, established under Dominion legislation and making monthly reports to the Department of Finance.

Dominion Government Savings Banks.—Prior to 1929 there were two classes of Dominion Government savings banks in Canada, the Post Office Savings Bank, under the Post Office Department, and the Dominion Government Savings Bank, attached to the Department of Finance. The former was established under the Post Office Act of 1867 (31 Vict., c. 10) in order to "enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the Dominion to every depositor for repayment of all money deposited by him together with the interest due thereon".

Branches of the Government Savings Bank proper, under the authority of the Finance Department, were established in the leading cities of Canada under the management of the Assistant Receivers-General and in other places, in the provinces of Nova Scotia and New Brunswick, under managers appointed by the Governor in Council. The Dominion Government Savings Bank was amalgamated with the Post Office Savings Bank in 1929. Historical statistics for both systems will be found in Table 24 and more detailed figures covering the last six years in Table 25.

24.—Deposits with Dominion Government Savings Banks,¹ for representative years ended June 30, 1868-1906, and Mar. 31, 1907-36.

NOTE.—Figures for all intermediate years will be found on p. 833 of the 1926 Year Book.

Provincial Government Savings Banks.—Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta, while a similar institution was in operation in Manitoba from 1924 to 1932 when the depositors' accounts were taken over by the chartered banks.

Ontario.—In the session of 1921, the Legislature of Ontario authorized the establishment of the Province of Ontario Savings Office, and in March, 1922, the first branches were opened. The funds received from this source are used almost exclusively to finance farm loans under the Agricultural Development Act. Interest at the rate of 2 p.c. per annum compounded half-yearly is paid on accounts. The deposits are all repayable on demand. Total deposits on Jan. 31, 1937, were over \$37,000,000 and the number of depositors at that date was over 106,000. Twenty-five branches are in operation throughout the province.

Alberta.—In Alberta the Provincial Treasury receives savings deposits and issues demand savings certificates bearing interest at 2 p.c., or term certificates for one, two or three years, in denominations of \$25 and upwards, bearing interest at 2 p.c. for one year and 2½ p.c. for two or three years. The total amount in savings certificates on Dec. 31, 1936, was \$8,429,145, made up of \$4,519,520 in demand certificates and \$3,909,625 in term certificates.

Other Savings Banks.—The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871, had on Dec. 31, 1936, a paid-up capital and reserve of \$4,500,000, savings deposits of \$57,809,007, and total liabilities of \$59,125,542. Total assets amounted to \$64,069,878 including over \$46,000,000 of Dominion, provincial and municipal securities. The Caisse d'Economie de Notre-Dame de Québec, founded in 1848 under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a Dominion charter by 34 Victoria, c. 7, had on Dec. 31, 1936, savings deposits of \$13,587,855, a paid-up capital and reserve of \$2,500,000 and total assets of \$16,843,332.

The co-operative people's banks of Quebec (202 reported to the Provincial Government in 1935) are also an important element in promoting thrift and assisting business in that province. Thus on Dec. 31, 1935, savings deposits in these banks amounted to \$6,865,477, while the amount on loan was \$8,287,077. Loans granted in 1935 numbered 12,175 amounting to \$2,803,748. Profits realized amounted to \$472,543. (See also p. 768 of this volume.)

26.—Deposits in the Montreal City and District Bank and the Caisse d'Economie de Notre-Dame de Québec, as at June 30, for representative years 1868-1906, and Mar. 31, 1907-36.

NOTE.—Figures for all intermediate years will be found on p. 833 of the 1926 Year Book.

PART II.—MISCELLANEOUS COMMERCIAL FINANCE.

Section 1.—Loan and Trust Companies.

The Canada Year Book, 1934-35, presented at p. 993 an outline of the development of loan and trust companies in Canada from 1844 to 1913.

The laws relating to trust and loan companies were revised by the Loan and Trust Companies Acts of 1914 (4-5 Geo. V, cc. 40 and 55), with the result that the statistics of provincially incorporated loan and trust companies ceased to be collected. The statistics of Tables 2 and 3 refer only to those companies operating under Dominion charter, except that, beginning in 1925, the statistics of loan companies and trust companies incorporated by the province of Nova Scotia, and brought

by the laws of that province under the examination of the Dominion Department of Insurance, have been included. Also, since 1922, provincially incorporated loan and trust companies have made voluntary returns of their statistics to the Dominion Department of Insurance, so that all-Canadian totals are again available for recent years. As indicating the progress of the aggregate of loan company business in Canada, it may be stated that the book value of the assets of all loan companies rose from \$188,637,298 in 1922 to \$213,649,794 in 1931, although declining slightly to \$201,575,353 in 1935. The total assets in the hands of the trust companies increased from \$805,689,070 in 1922 to \$2,726,207,098 in 1935. The latter figure included \$2,496,834,244 of "estates, trust and agency funds". (Table 1.)

Functions of Loan Companies.—The principal function of loan companies is the lending of funds on first mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings department deposits. Of the loan companies operating under provincial charters, the majority conduct loan, savings, and mortgage business, generally in the more prosperous farming communities.

Functions of Trust Companies.—Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies and, where so appointed, as authorized trustees in bankruptcy. Some companies receive deposits, but the lending of actual trust funds is restricted by law. The figures of Table 1 are of particular interest in the case of trust companies, which, on account of the nature of their functions, are mainly provincial institutions, since their chief duties are intimately connected with the matter of probate, which lies within the sole jurisdiction of the provinces.

¹ Includes statistics of trust companies chartered by the Government of Nova Scotia but inspected by the Dominion Department of Insurance. ² Includes money in trust for investment amounting to \$2,562,455 in 1914, \$3,113,170 in 1915, \$3,799,149 in 1916, \$3,443,682 in 1917, and \$5,170,463 in 1918; corresponding amounts are included under the heading "Estate, Trust and Agency Funds" for the years 1920 to 1935. The figures for 1919 are not available.

Section 2.—Sales of Canadian Bonds.

Interesting aspects of public financing and of the investment of capital in Canadian development since 1911 are illustrated by the sales of Canadian bonds by classes, shown in Table 4. (The figures are reproduced from the *Monetary Times Annual*, 1937.) In the first part of this table, the bonds sold in each year are divided according to whether the financing was for Dominion or Provincial Governments, or for municipalities, railways or other corporations, while in the second part of the table the sales in each year are distributed according to sales in Canada, the United States and the United Kingdom.

The total sales of Canadian bonds naturally reached a very high mark toward the close of the War, owing to the Dominion Government financing required to cover the war expenditures. However, the total sales were greater in 1931 than in any other year, owing largely to the Dominion Government's conversion loans.

Dominion Government financing through bond sales since 1907 may be divided into three periods: the first from 1908 to 1914, when the money was required largely for internal development of the country, public works and Government railways; the second from 1915 to 1919, when war expenditures required very large borrowings; and the third since the War, when the issues have been largely required for refunding former loans at lower interest rates and for expenditures in connection with public works and railways.

Provincial bond issues have been on a much larger scale since the War than formerly, probably due to the development of provincially-owned public utilities and of improved highways. Sales of the bonds of Canadian municipalities, on the other hand, were greater in 1913, toward the end of the "land boom", than they have been in any other year, although sales in 1930 almost reached the record. However, allowing for the increased population in cities and towns, there has not been the same marked increase in the average annual sales of municipal bonds in the period since the War, as compared with the period before the War, that is noticeable in the case of provincial bonds.

Sales of corporation bonds, which from 1926 to 1930 had averaged over \$257,000,000 per year, dropped to \$10,550,000 in 1932, and to \$4,385,000 in 1933, this being largely due to the uncertainty of the industrial outlook. Railway bonds also showed a precipitate decline to \$12,500,000 in 1932, and fell to \$1,000,000 in 1933. In 1934, 1935, and 1936 substantial recoveries were shown in both classes.

A very striking change has taken place during the present century in the market in which Canadian bond issues are principally sold. Prior to the War, a great part of the capital required for Canadian development came from the United Kingdom, and the major portion of Canadian bond issues was sold there. The outbreak of war temporarily eliminated that market, and Canadians turned largely to the United States for outside capital. However, the great increase in wealth during and since the War has enabled a much greater proportion of public and industrial financing to be done at home, and beginning with the Victory Loan Campaigns, Canadians not only learned how to invest their money in bonds, but had the necessary funds to invest on a large scale in bond issues. These facts are reflected in the latter part of Table 4 showing that since 1915 a greatly increased proportion of the total issues of Canadian bonds has been sold within Canada. Thus, in 1936, 93.2 p.c. of all bonds issued were sold in Canada, 6.7 p.c. in the United States and 0.1 p.c. in the United Kingdom.

4.—Sales of Canadian Bonds, by Class of Bond and Country of Sale, calendar years 1911-36.

(From the *Monetary Times Annual*. Figures for 1904-10, inclusive, will be found at p. 921 of the 1933 Year Book.)

Section 3.—Corporation Dividends.

(From the *Financial Post Business Year Book*.)

The 1936 improvement in Canadian business, as indicated by higher corporate earnings, was reflected in the total annual dividend payments of \$260,641,000, compared with \$213,015,000 in 1935, or a gain of 22.3 p.c. The 1936 dividend disbursements amounted to nearly double those of 1933, the lowest year of the depression in this respect. Of the total disbursements for the year, mining companies accounted for \$85 millions, or 32.6 p.c. In Table 5 below there is given an eight-year record of aggregate monthly dollar payments and yearly totals for all companies paying dividends in Canada.

Section 4.—Foreign Exchange.

The Canadian dollar, adopted as our currency in 1857, was equivalent to 15/73 of the pound sterling; in other words, the pound was equal to \$4.866 in Canadian currency at par, and remained so, with minor variations between the import and export gold points representing the cost of shipping gold in either direction, until the outbreak of the Great War. During the first eleven years after Confederation, the Canadian dollar was at a premium in the United States, as the United States dollar was not, after the Civil War, redeemable in gold until 1878. From the latter date, the dollar in the two countries was equivalent at par, and variation was only between the import and export gold points or under \$2 per \$1,000.

At the outbreak of the Great War, both the pound sterling and the Canadian dollar were made inconvertible into gold and fell to a discount in New York, though this discount was "pegged" or kept at a moderate percentage by sales of United States securities previously held in the United Kingdom, borrowing in the United States, and, after the United States entered the War, by arrangements with the United States Government. After the War, when the exchanges were "unpegged" about November, 1920, the British pound went as low as \$3.18 and the Canadian dollar as low as 82 cents in New York. In the course of the next year or two, exchange was brought practically back to par, and the United Kingdom resumed gold payments in 1925 and Canada on July 1, 1926. From then until 1928 the exchanges were within the gold points, but in 1929 the Canadian dollar again fell to a moderate discount in New York. The dislocation of exchange resulting from this discount persisted, with the exception of a few months in the latter half of 1930, into 1931. Dollar rates were below the gold export points, however, only for a few scattered intervals. Fluctuations since September, 1931, are dealt with below.

Recent Movements in Canadian Exchange.*—Because of Canada's close financial and commercial relationships with the United Kingdom and the United States, Canadian exchange rates are influenced to a large extent by the London and New York markets. The United Kingdom buys much more from Canada than Canada buys from her, but the reverse is the case as regards the trade between Canada and the United States. The result is that there is a supply of bills on London in excess of the amount needed to meet current obligations in the United Kingdom. By offering these for sale for United States funds in London or New York, a triangular balance is approximated by book transactions and the amount of gold transfers is thereby greatly reduced. The volume of sterling exchange on Canadian account thus passed to the New York market does not greatly influence New York rates of sterling exchange under normal conditions; on the contrary, the volume of the New York-London transactions is sufficient to carry the Canadian rates along with them.

In September, 1931, the equilibrium of international exchange was seriously disturbed. This unfortunate turn of events followed a period of over six years during which the nations of the world had worked steadily towards the stabilization of their currency systems upon a gold basis. Within two months of the time when the United Kingdom found it necessary to suspend free gold shipments, however, only a very small number of countries, including the United States and France, were left with currencies unshaken by preceding abnormal gold movements. The decision of the United Kingdom to go off the gold standard (Sept. 21, 1931) resulted in a sharp depreciation of sterling in New York. Canadian rates depreciated also,

*Revised by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics.

and fluctuated broadly with sterling until the United States dollar dropped from the ranks of gold standard currencies on April 19, 1933.

Since that time major adjustments have occurred in practically all currencies of the world. The United States dollar was replaced on a gold basis, but was devalued at 59.06 p.c. of its former gold parity ($13\frac{5}{7}$ grains or $\frac{1}{8}\frac{1}{5}$ oz. of gold to the dollar as against 23.22 grains previously) on Jan. 31, 1934, with other countries following suit at irregular intervals until the final break-up of the European gold "bloc" in September, 1936. These countries, including France, Belgium, and Switzerland, were the last to abandon post-war gold standards established between 1925 and 1927. During 1936, the United States dollar and the Canadian dollar fluctuated narrowly about par, while the £ sterling declined in the latter half of the year until it also approached its old New York and Montreal parity of \$4.866. With the exception of the last three months of the year, when readjustments within the former gold "bloc" were occurring, 1936 exchange fluctuations were unusually narrow.

6.—Monthly Averages of Exchange Quotations at Montreal, 1935 and 1936.

NOTE.—The noon rates in Canadian funds upon which these averages are based have been supplied by the Bank of Canada.

CHAPTER XXIII.—INSURANCE.*

Insurance business is transacted in Canada by companies of the following classes, *viz.*, (1) companies incorporated under the laws of the Dominion of Canada or of the former "Province of Canada", (2) companies incorporated under the laws of the provinces of Canada, and (3) companies incorporated or formed under the laws of British and foreign countries. The word "companies" as here used, includes fraternal benefit societies and exchanges which transact the business of insurance. The Dominion Insurance Acts provide that companies of classes (1) and (3) above may not transact business anywhere in Canada unless registered† by the Dominion, but these Acts also provide that fire insurance on property in Canada may be effected in companies of class (3) even though not registered, if the insurance is effected without solicitation, advertising or the use of the mails, and if an office is not maintained in Canada, though property to be insured may be inspected and losses may be adjusted. Insurance so effected is generally known as "unlicensed insurance". Companies of class (2) above may transact business in the province of incorporation, subject to compliance with the laws thereof, or in any other province subject to compliance with the laws thereof, or, on compliance with the Dominion laws, may be granted Dominion registration. Most of these companies limit their business to the province of incorporation or to one or more other provinces; a few only have been granted Dominion registration.

What has been said above implies that jurisdiction concerning insurance companies and insurance business is divided between the Dominion and the provinces. There have been many references to the courts and appeals to the Privy Council with a view to determining the respective legislative domains, both in respect of insurance legislation specifically and in respect of legislation affecting companies generally, including insurance companies. The latest Privy Council decision was handed down in 1931. It may now be taken as established that the Parliament of Canada may require companies formed or incorporated outside of Canada to obtain Dominion registration and to continue to be so registered as a condition of transacting business in Canada, and these companies may be required to make returns from time to time of their business and doings in Canada and to furnish evidence of their solvency. The powers of the Dominion go much further in reference to companies incorporated by the Parliament of Canada, but include all of the powers which may be exercised over companies formed or incorporated outside of Canada and registered by the Dominion. The Acts passed in 1932‡, as since amended, implement the powers of the Dominion as determined by the Privy Council decisions.

The Dominion Acts under which companies are registered are administered by the Department of Insurance under the Minister of Finance. The chief officer of the Department of Insurance is the Superintendent of Insurance. The first Superintendent was appointed in 1875 as head of a newly created Insurance Branch of the Department of Finance. In 1910 the Insurance Branch was constituted into a separate Department, the Department of Insurance, under the Minister of Finance.

*The statistics of Fire, Life and Miscellaneous Insurance have been revised by G. D. Finlayson, Superintendent of Insurance, and those pertaining to Government Annuities (Section 4) by W. M. Dickson, Deputy Minister of Labour.

†Prior to 1932, the Dominion Insurance Acts provided for the "licensing" of companies; the Acts passed in 1932 provide for "registration". The change in terminology does not indicate any change in substance.

‡The Canadian and British Insurance Companies Act, 1932 (22-3 Geo. V, c. 46). The Foreign Insurance Companies Act, 1932 (22-3 George V, c. 47).

Precedent to obtaining first registration, in addition to filing certain documents, including a full and complete financial statement, a company must satisfy the Minister that it is sound and solvent and must make the required initial deposit of securities, varying from \$10,000 to \$100,000, depending on the class of business to be undertaken. Annual returns are required of all registered companies and the Acts require an examination to be made, by the Superintendent or on his behalf, of the books and records of companies with a view to substantiating the accuracy of the statements filed and the soundness of the companies. Should any company show an unsatisfactory financial condition, the Acts require remedial measures to be taken. British and foreign companies are required to maintain in Canada assets sufficient to cover all of their liabilities in Canada, while Canadian companies are required to maintain in Canada all of their assets, except such as it may be necessary to deposit outside of Canada as security for "out of Canada" business.

The statistics herein given for companies registered by the Dominion are divided into three classes relating to: (1) insurance against fire, (2) life insurance, and (3) miscellaneous insurance, *viz.*, accident, automobile, aviation, burglary, credit, earthquake, explosion, forgery, guarantee, hail, leakage, live-stock, sickness, steam boiler, title, tornado and weather insurance. These statistics are compiled from the reports of the Department of Insurance; throughout they apply to calendar years.

Since 1915, the Department of Insurance has collected statistics, included herein, of business transacted by provincial companies licensed by the provinces, classified as to: (1) business transacted within the province of incorporation, and (2) business transacted in other provinces.

Returns for "unlicensed insurance", above referred to, were required under Section 16 of the Special War Revenue Act for taxation purposes, and statistics compiled from these returns were published in the Canada Year Book, prior to the 1933 edition, as Table 8. This section of the Act having been held unconstitutional by the Privy Council decision, Oct. 22, 1931, on an appeal from the Court of the King's Bench of the province of Quebec, the returns for 1930 were incomplete and were not published in the 1933 Year Book. By an amendment to the Act at the 1932 session of Parliament, a section analogous to Section 16 was enacted, applicable to unlicensed insurance and the information was, therefore, revived in the 1934-35 edition. This information is, however, no longer required from such companies and has been again dropped.

Statistics of Dominion Government annuities are given at the end of this chapter. The Department of Labour administers the Acts under which these annuities are sold.

Section 1.—Fire Insurance.

Fire insurance in Canada began with the establishment by British fire insurance companies of agencies, usually situated in the sea ports and operated by local merchants. The oldest existing agency of a British company is that of the Phoenix Fire Office of London, now the Phoenix Assurance Company, Ltd., which commenced business in Montreal in 1804. On account of the growth of the insurance business of these early British companies, branch offices were established and local managers were appointed, charged with directing the companies' affairs in Canada.

The Halifax Fire Insurance Co. is the first purely Canadian company of which any record is available. Founded in 1809 as the Nova Scotia Fire Association,

it was chartered in 1819 and operated in the province of Nova Scotia until 1919, when it was granted a Dominion licence. Among the other pioneer fire insurance companies still in operation, mention may be made of the following: the Quebec Fire Assurance Co., which commenced business in 1818 and was largely confined in ownership and operations to Quebec province; the British America Assurance Co., incorporated in 1833, the oldest company in Ontario; the Western Assurance Co., organized in 1851, and now, after a rapid and steady growth, one of the largest companies of its kind on the continent; two United States companies, the *Ætna* Insurance Co., Hartford, Conn., and the Hartford Fire Insurance Co., which commenced business in Canada in 1821 and 1836, respectively.

The report of the Superintendent of Insurance for the year ended Dec. 31, 1935, shows that at that date there were 242 fire insurance companies doing business in Canada under Dominion registration; of these 52 were Canadian, 68 were British and 122 were foreign companies. In 1875, the first year for which authentic records were collected by the Department of Insurance, 27 companies operated in Canada—11 Canadian, 13 British and 3 United States. The proportionate increase in the number of British and foreign companies from 59 p.c. to almost 79 p.c. of the total number is a very marked point of difference between the fire and life insurance businesses in Canada, the latter being carried on very largely by Canadian companies.

Although in its early days the Dominion did not prove a very lucrative field for fire insurance companies, the great advance in building construction and the wide use of improved fire appliances and safety devices have materially reduced the danger of serious conflagrations and have placed the risks assumed by companies in Canada on an equality with those of other countries.

A feature of the fire insurance business, besides the large percentage of British and foreign companies, is the continued increase in the number of companies which are operating on the mutual or reciprocal plan. These companies, in which all profits or losses are directly received or paid by the policyholders, are making themselves felt as competitive factors in the fire insurance business.

Statistics of Fire Insurance.—Statistical tables of fire insurance in Canada illustrative of the progress of total business since 1869 and of the operations of individual companies for the year 1935 follow. The net amount of fire insurance in force on Dec. 31, 1935, with companies holding Dominion licences, was \$8,782,698,-099,* while the net amount in force with provincial companies on the same date was \$1,644,023,953. Thus the grand total fire insurance in force on Dec. 31, 1935, with Dominion and provincial companies was \$10,426,722,052.

Table 1 shows figures of the growth since 1869 of companies registered by the Dominion, the relationship between losses paid and net premiums written, and the variation in the cost per \$100 of insurance. It will be observed that the cost of insurance reached a maximum in 1904 and 1905; there has since been a steady decrease with the exception of the years 1921, 1922, and 1924, when temporary reversals of the downward swing were in evidence. It is noteworthy that the cost of fire insurance has decreased by 56.25 p.c. since 1905. Table 2 shows the business done in Canada by individual companies during the year 1935, while in Tables 3, 4 and 5 are given figures of the assets, liabilities, incomes and expenditures during the years 1930 to 1935, classified by nationality of companies. A further summary of

*According to preliminary figures, fire insurance in force in companies registered by the Dominion increased by \$460,745,150 in 1936.

business is given by provinces in Table 6 for the years 1934 and 1935, showing premiums and losses classified by provinces and by nationality of companies. Further, a summary of the business transacted by both Dominion and provincial licensees is given in Table 7.

Summary of Fire Insurance in Canada, 1935.—Of the total amount of fire insurance effected in Canada during each year, a part is sold by companies holding provincial licences and permits. Such companies generally confine their operations to the province of incorporation, but may be allowed to sell insurance in other provinces. The bulk of fire insurance business, however, is transacted by companies registered by the Dominion. Operations in 1935 are summarized in Table 7.

Section 2.—Life Insurance.

An article descriptive of the growth and development of life insurance in Canada, more particularly with reference to insurance legislation, contributed by A. D. Watson, of the Department of Insurance, Ottawa, appeared on pp. 937-944 of the Canada Year Book, 1933.

Life Insurance Statistics.—Life insurance business was transacted in Canada in 1935 by 42 companies registered by the Dominion, including 28 Canadian, 6 British and 8 foreign companies. There were also 6 British and 6 foreign companies registered to write insurance but which had practically ceased to write new insurance, while 2 other British and 3 other foreign companies were authorized under the Act to transact business in connection with policies written prior to Mar. 31, 1878. One foreign company was licensed to transact business in 1931, but has not yet written any life insurance business in Canada, except by way of re-insurance. Two other foreign companies were registered, one in 1934 and one in 1935, which did not issue any life insurance in Canada during the year.

As shown by the chronological statistics of Table 8, life insurance business in Canada has expanded from very small beginnings, the total net life insurance in force in all companies licensed by the Dominion in 1869 being only \$35,680,082, while in 1935 it was \$6,259,158,404,* the amount per head of the estimated popula-

*This total does not include \$157,524,727 of fraternal insurance. Preliminary figures for 1936 indicate \$6,407,469,845 of life insurance in force in Dominion companies not including \$167,585,764 of fraternal insurance.

tion of Canada having more than doubled since 1919—an evidence of the general recognition of the value of life insurance for the adequate protection of dependants against misfortune. Notable also from these statistics is the fact that in this field British companies, the leaders in 1869, have fallen far behind the Canadian and the foreign companies. The total net amount of new insurance effected during the year 1935 was \$588,353,277,* as compared with \$595,194,820 in 1934, \$578,585,659 in 1933, \$653,249,366 in 1932, \$782,716,064 in 1931, \$884,749,748 in 1930 and \$978,141,485 in 1929, while the premiums paid were \$200,157,567, as compared with \$202,583,536 in 1934, \$206,954,224 in 1933, \$216,132,957 in 1932, \$225,100,571 in 1931, \$220,523,727 in 1930, and \$210,728,479 in 1929.

The following diagram shows the rapid increase of life insurance in force in companies licensed by the Dominion between 1900 and 1930, and the gradual but steady improvement which has taken place between 1934 and 1936.

In Table 9 detailed statistics are given of the business of Canadian, British and foreign companies, respectively, by companies, in 1935, while Table 10 is a summary showing the business of Canadian, British and foreign companies for the past 5 years. Table 11 shows the ordinary and industrial policies in force and effected during the year ended Dec. 31, 1935. Table 12 gives the insurance death rates by classes of companies, and Tables 13, 14 and 15 show, respectively, the assets, liabilities, cash income, and expenditure of Canadian and other life insurance companies for the years 1931-35. Statistics of Dominion fraternal insurance are given in Table 16 and of Dominion and provincial insurance combined in Table 17, which shows that on Dec. 31, 1935, the total life insurance in force in Canada was \$6,579,120,275.

*The net amount of new insurance effected in 1936 was \$616,549,404 according to preliminary figures.

¹ Figures do not include insurance in force and effectuated by fraternal societies operating under Dominion charters. The amount of insurance in force in such societies amounted to \$167,585,764 in 1936, according to preliminary figures. Corresponding figures for the years 1931-35 are given in Table 16, pp. 942-943.

² For estimates of populations upon which these figures are based, see p. 153.

³ Subject to revision.

9.—Life Insurance in Force and Effectuated in Canada by Companies Operating under Dominion Registration, 1935.

NOTE.—The statistics of this table do not include the business of Canadian companies outside of Canada.

¹ Includes expenditure on business outside of Canada.

² Expenditure in Canada.

Life Insurance Effected through Fraternal Benefit Societies.—In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 16 gives statistics of life insurance effected with fraternal benefit societies by Canadian members, together with statistics of assets, liabilities, income and expenditure relating to the whole business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. Each benefit fund of every society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries, London; of the Faculty of Actuaries in Scotland; of the Actuarial Society of America; or of the American Institute of Actuaries), and unless the actuary certifies to the solvency of each fund a readjustment of rates or benefits must be made. The statistics in the first part of this table relate to the Canadian societies reporting to the Insurance Department of the Dominion Government. These numbered 8 in 1935, *viz.*, Alliance Nationale, Ancient Order of Foresters, Artisans Canadiens-Français, Canadian Woodmen of the World, Catholic Mutual Benefit Association, Commercial Travellers' Association of Canada, Independent Order of Foresters, and the Grand Orange Lodge of British America.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain Dominion authority precedent to transacting business in Canada, but any such societies which at that date were transacting business under provincial licences, while forbidden to accept new members, were permitted to continue all necessary transactions in respect of the insurance of their then members. Most of these societies have since obtained Dominion authority to transact business, also some foreign societies which had not previously been licensed by the provinces. Of both classes of societies, 26 transacted business

in Canada in 1935, *viz.*, Aid Association for Lutherans, Association Canado-Américaine, Catholic Order of Foresters, Commercial Travelers' Mutual Accident Association of America (accident business only), Croatian Fraternal Union, Expressmen's Mutual Benefit Association, First Catholic Slovak Union, First Catholic Slovak Ladies' Union, Jewish National Workers' Alliance, Knights of Columbus, Ladies' Catholic Benevolent Association, Lutheran Brotherhood, Lutheran Mutual Aid Society, Maccabees, Ministers Life and Casualty Union, Modern Woodmen of America, National Fraternal Society of the Deaf, National Slovak Society of U.S.A., Royal Arcanum, Slovene National Benefit Society, Sons of Norway, United Commercial Travelers of America (accident business only), Woman's Benefit Association, Women's Catholic Order of Foresters, Workmen's Circle, and Yeomen Mutual Life Insurance Company, which is continuing the business issued by the Brotherhood of American Yeomen.

Summary of Life Insurance in Canada, 1935.—In addition to the business transacted by life insurance companies registered by the Dominion, a considerable volume of business is also transacted by companies licensed by the provinces. Statistics of these provincial companies have been collected since 1915 by the Department of Insurance. Table 17, showing policies effected and in force, premiums received and losses paid, in Canada in 1935, summarizes the volume of business done by both life companies and fraternal societies, whether registered by the Dominion or licensed by the provinces.

Section 3.—Miscellaneous Insurance.

Since 1875 the growth of insurance business other than fire and life has been steady. The report of the Superintendent of Insurance for the calendar year 1880 shows that the number of companies licensed for the transaction of accident, guarantee, plate glass and steam boiler insurance—the only four classes of miscellaneous insurance then transacted—was 5, 3, 1, and 1 respectively. The report for the year 1935 shows that miscellaneous insurance in Canada now includes: accident, automobile, aviation, burglary, credit, earthquake, explosion, forgery, guarantee, hail, leakage, live-stock, steam boiler, title, tornado, weather insurance, etc. In 1880, 10 companies transacted business of the miscellaneous kind, but in 1935 such insurance was issued by 234 companies, of which 53 were Canadian, 63 British, and 118 foreign; 178 of these 234 companies also transacted fire insurance. In addition, 15 fraternal orders or societies carried on accident and sickness insurance as well as life insurance business and 2 fraternal orders or societies carried on accident insurance only.

Accident Insurance.—The first licence of this kind was issued to the Travelers' Co., of Hartford, Conn., in 1868. The first licence to a Canadian company was issued to the Accident Insurance Co. of Canada, which was organized in 1872 and commenced business in 1874. In 1927 life companies were empowered to include in life insurance policies additional insurance, payable only in event of death from accident, up to an amount not exceeding the amount payable in event of death from other causes, commonly known as "the double indemnity benefit". A large proportion of life insurance policies issued in recent years includes this benefit. Seventy-seven companies transacted accident insurance in 1935.

Automobile Insurance.—This is now one of the most important branches of the miscellaneous class of insurance. Premiums increased from \$80,446 in 1910 to \$573,604 in 1915 and to \$18,260,176 in 1930; for 1935 they were \$11,973,477, showing a very slight increase as compared with 1934 and 34.4 p.c. decrease, compared with 1930. There has been an increase in the number of companies from 7 to 153 during the 25-year period.

Plate Glass Insurance.—Policies were first sold in Canada by the Metropolitan Plate Glass Insurance Co., a United States concern, which withdrew from Canada during 1882. The 75 companies operating in Canada in 1935 received premiums of \$491,347 and incurred losses of \$240,546, compared with premiums of \$508,960 and losses of \$264,625 for 1934.

Burglary Insurance.—In 1893 only one company issued burglary policies. A second followed in 1905 and in 1910 five companies were operating, while 73 companies sold this type of insurance during 1935. The premium income of these companies amounted in 1935 to \$1,231,268, and the losses incurred amounted to \$627,022.

Hail Insurance.—Insurance against hailstorms is a class of business of comparatively recent development in Canada. During the year 1935, 36 companies undertook this class of risk, the premiums written amounting to \$1,068,670, and the losses incurred to \$636,922. The total premiums for the 26 years during which this business had been carried on in Canada amounted to \$68,001,078 and the total losses paid to \$46,806,069.

Section 4.—Government Annuities.

In the early years of the 20th century, there arose throughout the civilized world a distinct movement in favour of ameliorating the living conditions of the less well-off members of society. One form which this movement took in the United Kingdom was that of old age pensions, granted by the State as a gift to its poorer citizens, whose earnings were very generally insufficient to permit of a margin of saving. In Canada, where wages were higher and a margin of saving was possible, the movement at first took the form of providing, by establishing Government annuities, an absolutely safe investment for such savings, which had only too often been lost through the inexperience of their owners, leaving the latter a burden upon the charity of relatives or of the public.* The cost of administering these annuities is borne by the Dominion Government.

Under the Government Annuities Act (c. 7, R.S.C., 1927, amended by c. 33, R.S.C., 1931), His Majesty the King, represented by the Minister (at present the Minister of Labour), may sell to persons over the age of 5 years, domiciled or resident in Canada, immediate or deferred annuities of not less than \$10 nor more than \$1,200 (1) for the life of the annuitant, (2) for a term of years certain, not exceeding 20 years, or for the life of the annuitant, whichever period shall be the longer, or (3) to any two persons domiciled in Canada during their joint lives, and with or without continuation to the survivor. The property and interest of any annuitant in any contract for an annuity is neither transferable nor attachable. The purchaser may contract that, in the event of the death of the annuitant before the date fixed for the annuity to begin, all money paid shall be refunded to the purchaser or his legal representatives with interest at the rate of 4 p.c., compounded yearly.

From Sept. 1, 1908, the date of the inception of the Annuities Branch, up to and inclusive of Mar. 31, 1936, the total number of annuity contracts issued was 29,093. Of these contracts, 2,844 have been cancelled, leaving in force on Mar. 31, 1936, 26,249 contracts. The total amount of purchase money received during the same period was \$77,943,871. Table 22 gives the details of annuities contracted for and purchase money received from 1909 to 1936, by years.

* A Dominion-Provincial non-contributory scheme of old age pensions, providing for the payment, to persons 70 years or over, of pensions not exceeding \$20 per month, contributed by the Dominion and the provinces which become parties to the scheme, was enacted by Chapter 35 of the Dominion Statutes of 1927. For further particulars, see pp. 764-765.

¹ Amount of immediate annuities.

It will be seen from the statements above that government annuities have grown steadily in favour, especially since 1921, the fund reaching a total of \$66,441,822 on Mar. 31, 1936.

CHAPTER XXIV.—COMMERCIAL FAILURES.

According to Section 91 of the British North America Act, "the exclusive legislative authority of the Parliament of Canada" extends to bankruptcy and insolvency legislation, and an Insolvency Act (32-33 Vict., c. 16) was actually passed by the Dominion Parliament in 1869, applying to the four original provinces. This Act was in force for four years and was renewed by c. 46 of the Statutes of 1874, while in 1875 a new Insolvency Act (38 Vict., c. 16) applicable to the whole Dominion was passed, but was repealed in 1880. After this there was no Dominion legislation on the subject of bankruptcy until 1919. During the interval of nearly 40 years commercial failures were handled under provincial legislation, and the statistics relating to such failures during this period were compiled and published by Dun's and Bradstreet's commercial agencies. In 1919 a general Dominion Bankruptcy Act was passed (9-10 Geo. V, c. 36). Statistics of commercial failures dealt with under this Act since it came into force in 1920 have been compiled and published by the Dominion Bureau of Statistics. (See pp. 953-954.)

Table 1 below gives summary statistics of industrial and commercial failures in Canada, by classes for 1934 and 1935 and by classes and provinces, for 1936. At p. 969 of the 1936 Year Book a historical table gives failures for Canada and Newfoundland by classes for the years 1915 to 1935. Early in 1936, however, Dun and Bradstreet, Incorporated, adopted a new method of classification. The principal changes consisted of setting up a new group of construction enterprises previously included in manufacturing and a new class for commercial service. Real estate companies, holding, and other financial companies, and agents of various kinds were dropped. These changes have had the effect of confining the failure records more to industrial and commercial lines of activity, and liabilities are reduced more in proportion to the number of failures since the companies eliminated usually ran high in indebtedness. The present figures of Table 1 are not comparable with those given at p. 969 of the 1936 Year Book, to which the reader is referred for earlier historical data, both because of the above reasons and because the earlier statistics cover Canada and Newfoundland whereas these are for Canada only.

Failures, by Divisions of Industry.—In every year the great majority of the commercial failures of the country are found among the trading establishments, which are so much more numerous than the manufacturing. Thus, according to the records of Dun and Bradstreet, Incorporated, out of a total of 1,238 commercial failures in Canada in 1936, 806 were among the retail trading establishments, including 245 in food, and 183 in apparel.

Out of the 260 manufacturers who failed, 84 were in the textiles business, 56 in foods, and 19 among manufacturers of forest products. The larger scale on which manufacturers operate is evident from the fact that the defaulted liabilities of the 260 manufacturers were greater than those of the 806 retail traders. The figures of commercial failures are analysed in detail for the years 1934, 1935, and 1936, in Table 3.

Assignments under the Bankruptcy and Winding Up Acts.—Under the Bankruptcy and Winding Up Acts (R.S.C., 1927, cc. 11 and 213) certain documents relating to assignments have, since 1920, been forwarded to the Dominion Statistician for statistical analysis. Table 4 gives the resulting figures of failures, by provinces, in 1922 and subsequent years, while Table 5 classifies them by branches of business. Table 6 gives the assets and liabilities of the assignors. A detailed analysis of the 1936 failures, by provinces and branches of business, is made in Table 7.

Administration of Bankrupt Estates.—The administration of bankrupt estates is now carried on by the Superintendent of Bankruptcy, appointed in 1932, with the object of conserving as far as possible the assets of bankrupt estates for the benefit of the creditors. Figures from the first report were given at p. 1039 of the 1934-35 Year Book, while those for 1935 were shown at p. 972 of the 1936 Year Book.

8.—Totals of Assets, Liabilities, Assets Realized and Costs of Administration in Bankrupt Estates Closed in the calendar year, 1936.

CHAPTER XXV.—EDUCATION.

Section 1.—Schools, Colleges and Universities.*

The British North America Act assigned public education in Canada, except in the case of the native Indian population, to the jurisdiction of the Provincial Governments. A system of public elementary and secondary education, financed mainly by local school authorities but assisted by provincial grants, has developed in each province. There are some private schools in all provinces (*i.e.*, schools that are not conducted by publicly-elected or publicly-appointed boards, and which are not financed out of public money), but their enrolment is not large in comparison with that of the public schools. At the level of higher education six provinces have each a provincially-supported university, and the remaining three have each one or more colleges supported out of provincial funds, but in most of them there are considerable numbers of students in private, endowed or denominational colleges.

Table 1 of this Chapter gives summary statistics on these different categories of educational institutions: (1) Provincially-Controlled Schools; (2) Privately-Controlled Schools; (3) Dominion Indian Schools; (4) Universities and Colleges. It is followed by subsections treating each of the four groups separately, except Indian Schools, for which data are given in a later chapter along with other information on Indian Affairs.

Lengthening School Attendance.—At each decennial census the number of children who have attended school during the preceding school year and the months attended are ascertained. From this information it is possible to calculate the amount of schooling being received per child. If ten months of attendance are considered a full year of schooling the child of 1911 may be said to have attended school 6·58 years, the child of 1921 about 7·58 years, and the child of 1931 about 8·55 years.

The average time spent in school has increased at the rate of one month per year since 1911, *i.e.*, twenty months or two years of attendance per child in twenty years. And lest it be thought that this increase is due to improved regularity of attendance rather than a longer school career, it may be noted that the average number of years during which each child spent some time in school (in other words, the time he was enrolled) increased from 7·96 in 1911 to 9·13 in 1921 and to 9·89 in 1931. In measuring the length of schooling this way the increase still appears to have been about two years in the twenty-year interval, and in 1931 the total time of a child in school averaged very nearly ten years throughout the country. Comparing this with the somewhat more than two years of added dependency, to which

* Revised by J. E. Robbins, M.A., Ph.D., Chief, Education Statistics Branch, Dominion Bureau of Statistics. This Branch is concerned with compiling and publishing comparable data relating to educational institutions throughout Canada, and to this end co-operates with the Provincial Departments of Education. A list of the publications of this Branch will be found in Chapter XXIX, Section 1, under "Education".

a record of earnings points, it would seem that all but a relatively small fraction of the longer period of "economic minority" was being spent in school. We can say that the increase in school attendance was almost exactly two years, the increase in dependency probably a little more.

The length of school attendance may be described in terms of the children's age as follows: in 1911 the average age on starting to school was 6·42 years, and adding to this the 7·96 years in school, the age on leaving must have been 14·38; in 1921 they started at age 6·33, stayed 9·13 years, and left at age 15·46; in 1931 the starting age averaged 6·36, the time in school 9·89 years and the age of leaving, 16·25.

Using as a guide the age on leaving school, it is possible to form a connection between 1931 and the years following. Unfortunately, there are only records for six provinces, the Maritime and Prairie Provinces, that permit of this use. A statement is presented below to show, since 1931, the tendency for the older children of these provinces to remain in school.

PERCENTAGES OF CHILDREN BETWEEN 15 AND 18 YEARS OF AGE REMAINING IN SCHOOL, FOR THE MARITIME AND PRAIRIE PROVINCES.

Province and Year.	Percentages of Children Enrolled in School.			
	Age 15.	Age 16.	Age 17.	Age 18.
MARITIME PROVINCES—				
1931.....	71·1	47·4	26·4	10·5
1933.....	71·6	51·3	32·7	16·3
1935.....	73·9	47·8	31·3	15·8
PRAIRIE PROVINCES—				
1931.....	73·1	44·7	26·3	12·6
1933.....	74·9	49·2	32·3	17·5
1935.....	73·4	45·7	30·8	17·4

In both areas the proportion of children in school at the ages 15-18 was higher in 1935 than in 1931, though not as high as in 1933. The two years following 1931 were those in which the chances of young people finding jobs were smallest, and they remained in school in unusual numbers. Since 1933 the proportions have fallen back nearer the level of 1931, but at the ages of 17 and 18 they are still considerably higher, and it seems likely that the long-term tendency of the current decade will be a continuation of the trend in 1911-31. The average age for leaving school in 1941 will probably be something like 17 years, in place of the 16·25 years of 1931.

¹ Figures for 1 (a) and 1 (b) in Quebec are for 1933-34; for 1 (a) in Ont., except secondary schools, are for calendar year 1934; all others are for 1934-35.

² Includes 177 in Item 1 (a), and 482 in Item 3, 14,000 in population and \$55,952 in expenditures on Indian schools; all for Yukon and Northwest Territories.

³ Schools for the blind, deaf, or mentally defective. These are boarding schools, and many of the pupils are from a province other than the one in which they are at school. This is true, too, of industrial or reform schools in some provinces, with enrolments exceeding 3,000, which should properly be included under this heading.

Canada, by Provinces, 1935, or Latest Year Reported.¹

Subsection 1.—The Provincially-Controlled Schools.

Provincial Administration.—The Department of Education is the permanent central body in charge of public education in each of the provinces. With the exception of Quebec this Department in all of the provinces is under the direction of the Provincial Government. In Ontario, Manitoba, Saskatchewan, and Alberta the Department is under the jurisdiction of a Cabinet Minister; the Minister of Education. There are also Ministers of Education in Prince Edward Island, and British Columbia, but in each province his authority is shared by several members of the Legislature. In Prince Edward Island all the members of the Treasury Board and four other persons appointed by the Lieutenant-Governor in Council form the Board of Education, while in British Columbia all the members of the Executive Council (Cabinet Ministers) are designated the Council of Public Instruction.

In the remaining provinces there are no Ministers of Education. The administration of the Department is under the Council of Public Instruction (the members of the Executive Council) in Nova Scotia; and the Board of Education (the members of the Executive Council, the President of the University of New Brunswick, and the Chief Superintendent of Education) in New Brunswick. The administrative body in the Province of Quebec is the Council of Education, made up of two committees, one Roman Catholic and the other Protestant. The Catholic Committee consists of: all the Roman Catholic Bishops, or Vicars Apostolic whose dioceses or parts thereof are in the province, *ex officio*; an equal number of Roman Catholic laymen; and four Roman Catholic teachers, two of whom must be priests. The Protestant Committee consists of a number of Protestants equal to the number of Roman Catholic laymen. The members of the Council, with the exception of the Roman Catholic Bishops, are appointed by the Crown and hold office during pleasure. The appointed members of the Protestant Committee may co-opt six additional Committee members and the Provincial Association of Protestant Teachers may annually elect one of their members to the Committee. The Council is represented in Parliament and in the Cabinet by the Provincial Secretary.

In most of the provinces the Department of Education is provided with a formal means of drawing upon the advice and assistance of educational leaders of the province. The most common form is in the appointment of an Advisory Board or Educational Council such as is found in Nova Scotia, Manitoba, Saskatchewan, and Alberta. Prince Edward Island, New Brunswick and Quebec, as shown above, carry out this principle by the appointment of leaders in education to the administrative body. Ontario and British Columbia are the only provinces that do not include this feature of educational control in their systems of education.

In addition to the members of the government of the day who change with the political parties, and the members of the educational boards or councils who are appointed or elected for varying terms, each province has as an important part of the central executive authority one or more permanent educational officials. In Ontario, the Prairie Provinces, and British Columbia the chief permanent official is the Deputy Minister of Education; in Prince Edward Island and New Brunswick the Chief Superintendent of Education; and in Nova Scotia and Quebec the Superintendent of Education. The above officials are appointed in each of the provinces by the Lieutenant-Governor in Council. The number of assistants and the size of the clerical staff required by these officials depend largely upon the school population and the number of schools in the province, and the different services undertaken by the Department.

The Departments of Education of the various provinces exercise a direct supervision over their schools through a staff of inspectors who make periodic visits to all the

schools. The school inspectors, with the exception of those employed in Winnipeg, in the Ontario city elementary schools, and in the province of Quebec are appointed and paid by the Departments of Education. In Winnipeg they are appointed by the School Board, and in the cities of Ontario by the Public School Board or the Board of Education. The Ontario Government makes a grant towards the payment of the inspectors employed of a sum equal to \$6 for every teacher in the city occupying a separate room. The inspectors in the province of Quebec are appointed by the Lieutenant-Governor in Council and paid through the Department of Education.

Local Administration.—In all of the provinces except Nova Scotia, Quebec, and Ontario the local unit of school control is known as the *school district*. Nova Scotia uses the term *school section* for all its local units and the term *district* for a division of the province over which a Board of School Commissioners presides whose principal duty is determination of school section boundaries. Ontario uses the term *district* for its high school units and *school section* for its elementary school rural units. In the province of Quebec the local unit is the *school municipality* and the term *district* is used to indicate a division of a rural school municipality containing as a rule a single school.

The urban schools in all the provinces are administered under systems of municipal ownership. Cities, towns, and villages form separate administrative units, and in some cases a part of the territory adjacent to them is included in the unit. The system of municipal ownership is extended in some provinces to the administration of their rural schools. In Quebec the rural unit coincides with the township, and in British Columbia with the district municipality. In Ontario, since 1932, a township as a whole, or any part thereof, may be made the unit. Manitoba has a provision in its School Act by which a rural municipality may become a single school district, and has had one municipal school district for fifteen years.

With the exception of the cases mentioned in the previous paragraph, the rural school unit is in no way synonymous with the unit for municipal government. It is usually formed out of an area which has enough children to make a school and which is not too large for all the children to reach the school on foot. Thus a rural municipality may contain several rural school units, and a rural school unit may be situated in parts of two or more rural municipalities. Several of the original school units, however, have taken advantage of the provision, included in the School Act of each province, which permits, at the option of the units concerned, the consolidation of two or more rural schools, or of rural schools with town or village schools. There are over 100 such consolidations in Manitoba, 60 in Alberta, 40 in Saskatchewan, 40 in Quebec, 30 in Ontario, and smaller numbers in the remaining provinces. In Saskatchewan some of them were large districts with conveyance provided from the time of first organization. By legislation passed in Alberta in 1935, the Minister of Education is empowered to direct that any two or more school districts be united under one Board, if, in his opinion, such a union would be in the interest of education. Early in 1937, eleven large units were in process of organization.

In all of the provinces, except Ontario and Saskatchewan, elementary and secondary education come under the same local authority. The Ontario and Saskatchewan Acts relating to secondary education provide for the appointment or election of a separate local board to manage high schools, but in many cases in both of these provinces the same local authority is in charge of elementary and secondary education. In Saskatchewan it is only in 18 or 20 of the larger towns and cities that there are two Boards. The continuation schools in Ontario are managed by the same Board as the elementary schools, and under the Boards of

Education Act most of the Ontario cities, and several of the towns and villages, manage their public elementary schools and their high schools by means of one Board.

In Quebec, Ontario, Saskatchewan, and Alberta the local authorities may be divided on denominational lines, the religious minority (Roman Catholic or Protestant, the latter term in practice including all who are not Roman Catholics) electing a separate Board. In Quebec, and in a few cases in Alberta, this separation applies to both elementary and secondary schools, but in Ontario and Saskatchewan, and for the majority of cases in Alberta, it is confined to the elementary schools. In Quebec the schools are generally known as "Catholic" and "Protestant". In Ontario, Saskatchewan and Alberta the schools of the separating minority are known as "separate schools" and the schools of the majority as "public schools". Most of the dissentient or minority schools of Quebec are Protestant, and with few exceptions the separate schools of Ontario, Saskatchewan, and Alberta are Roman Catholic.

The local school authorities are most commonly called *trustees*. In the province of Quebec, however, *trustees* is the name applied to the managing authority of the minority schools whether Protestant or Catholic, while the members of the local governing body of the schools of the majority are referred to as *commissioners*. The only other exception is in Nova Scotia where the term *commissioners* is used in cities and incorporated towns.

In most of the provinces the members of the Local School Boards are elected by vote. Exceptions to this rule are found in the cities and incorporated towns in the Maritime Provinces, the cities of Montreal and Quebec, and in the high school districts of Ontario. The School Boards in the cities and incorporated towns in the Maritimes, and in the cities of Montreal and Quebec are appointed in part by the Lieutenant-Governor in Council, and in part by the Council of the city or town. In the high school districts of Ontario the trustees are appointed by the Council of the municipality in which the district is situated, and in some cases the Public and Separate School Boards within the high school district each appoint a member to the High School Board.

According to the latest figures issued by the provincial Departments of Education there were approximately 23,500 School Boards operating schools in Canada. In Quebec and British Columbia, where there are rural administrative units of municipal size, there is a much smaller number of Boards than in other provinces of equal population.

School Organization.—The complete course in the provincial schools, elementary and continuation or secondary, consists of 12 or 13 grades, each requiring one year for the average child to complete. The final year has in the past been equivalent of the first year at university, but some universities are now demanding that students complete it before being admitted. The first seven or eight years have in the past been considered elementary, the remaining years secondary or high school, and this is still the most common arrangement. But a junior high or intermediate school is being introduced in several provinces, usually occupying pupils for three years, the seventh to ninth.

It is only in the larger towns and cities that elementary and secondary schools occupy separate buildings. Secondary work is taught in schools of all sizes, often in one-room schools, sometimes with the assistance of lessons by correspondence from the Departments of Education. The schools that are considered as secondary in French Quebec, the classical colleges, are conducted by religious communities, not elected Boards, and are not supported by local taxation. As they carry students through to the *baccalaureate* they are included in the university tables of this chapter.

Six of the Departments offer courses by correspondence for children living out of reach of a school, chiefly the children of families in scattered frontier posts. All Departments pay for the education of blind and deaf children in special schools. Enrolment in special schools or courses, such as these, is not included in Table 2, but only the enrolment in the ordinary schools conducted by local authorities and supported by local taxation.

2.—Historical Summary of Enrolment and Average Attendance in Schools in Canada, by Provinces, 1911-35.

NOTE.—Figures of enrolment and average attendance in various years prior to 1911 are given on pp. 839-840 of the 1932 Year Book.

³ Figures

for Quebec and Ontario for 1935 not available at time of going to press.

Secondary Education.—The number of pupils continuing their education beyond the elementary schools has increased very much more rapidly than the total enrolment, as may be seen in the following table. Table 3, also shows that in each of the provinces and in every year, the number of girls in the secondary grades has exceeded the number of boys. Another characteristic is the much greater number of urban than of rural children. The Census of 1931 indicated that only 25.4 p.c. of rural children in the age group 15-19 were in school, as compared with 41.2 p.c. of urban children of the same age group.

3.—Provincially-Controlled Schools in Canada: Comparative Numbers of Boys and Girls Doing Work of Secondary Grade in each of Seven Provinces, 1911-35.¹

NOTE.—For corresponding figures for 1901-10, see p. 974 of the 1933 Year Book. B=boys; G=girls.

² Figures revised since the publication of the 1936 Year Book.

³ Enrolment in Ontario is only for the month of May since 1930.

Statistics of the subjects taken by pupils in secondary grades in 1930, available for six provinces, were presented in the Canada Year Book, 1932, p. 843, showing, among other things, the small number of pupils taking Greek and German and the high proportion studying French and Latin. The "Annual Survey of Education in Canada, 1935" shows in detail the changes in the subjects chosen in recent years by secondary grade pupils in the different provinces.

Vocational and Technical Education.—The introduction of technical and vocational courses into the high school curricula has been stimulated in recent years by the Technical Education Acts of 1919, 1929 and 1931, under the terms of which the Dominion Government undertook to provide subsidies to the provinces to encourage the growth of technical instruction. From the outset evening classes during the winter months have been an important part of the work of the technical schools. The numbers of students in institutions for technical education coming within the scope of the Technical Education Act of 1919 (9-10 Geo. V, c. 73) in the academic years ended June 30, were as follows: 1921, 56,744; 1922, 61,961; 1923,

70,300; 1924, 79,829; 1925, 88,024; 1926, 88,961; 1927, 96,682; 1928, 109,008; 1929, 121,252. In the years since 1929 not all provinces have been receiving grants, but Table 4 provides a record of pupils receiving instruction of a technical character in the provincially-controlled schools in 1935.

¹ This table does not include students in commercial courses in Quebec who, it will be noted, constitute a numerous group in other provinces. In Quebec statistics they are included with the high schools, classical colleges, etc. Moreover, this table comes far short of demonstrating the full importance of technical or vocational training in Quebec for another reason. All the work in the Catholic schools in advance of the elementary years (i.e., in the five complementary and superior years, including about 30,000 pupils) has a highly vocational character. Apart from certain compulsory general subjects in these years, optional subjects are grouped in four vocational sections, in one of which each pupil studies.

² Enrolment in Ontario schools is not for the full year but for the month of May.

³ Not including junior high school students.

Teaching Staffs.—As shown in Table 1, the teaching staffs of day schools under provincial control in Canada consisted in 1935 of 73,921 teachers, 18,189 males and 55,732 females. Practically all of the increase of 3,500 in teachers since 1930 has been in the male class. The "Annual Survey of Education in Canada, 1935" deals in detail with the classification of these teachers, the rates of salary paid and the teaching experience. Table 5 summarizes statistics regarding rates of salary, as far as these are available. The heaviest loss during depression years has been in Saskatchewan rural schools, amounting to more than 50 p.c.

Financial Statistics.—Financial records of the provincial schools in Canada are neither equally complete nor entirely comparable in any two provinces. Hence it is quite impossible to construct a uniform set of tables for all provinces. A record of assets and liabilities is available only for four provinces, a record of expenditures only in five.

The closest approach to a comparable statement is in the case of receipts and the accompanying Table 6 has been compiled, covering the years 1926-36, in response to continued requests for data that will permit of a reasonably accurate comparison of school costs as between provinces. Table 2, showing the enrolment and average daily attendance for each year, may be used to calculate the approximate costs per pupil, or per "pupil-year of attendance".

The columns of Table 6 show the following: (1) Provincial Government grants to the school boards, also their contributions to teachers' salaries where these are paid directly to the teachers, and do not pass through the hands of the Board; (2) school taxes raised within the school administrative units, which are variously called districts, sections, or municipalities; (3) school board revenue from counties, affecting three provinces only; (4) total current revenue recorded, including tuition fees, which in the school administrative units of most provinces are collected only from non-resident pupils. Though there should be entries under this head in all provinces, they are on record only in four. There are other small amounts, such as receipts from rental of school property, that are not shown in the table for any of the provinces. The aim of this total column is to indicate the approximate amount of money that the school boards have had at their disposal to spend, from current sources, each year (plus teachers' salaries paid directly by the province). The fifth column shows the debenture indebtedness against schools in each year, for the provinces for which a record is available. The annual increase in the sum shown in this column indicates the net amount that was spent each year by school boards over and above the current revenue that is shown in the preceding column. By the inclusion of this column, a conception of each year's total expenditure may be gained. The whole is not as satisfactory a statement as a full record of receipts and expenditures would be, but in the absence of complete accounts it is the best substitute obtainable. Table 7 provides as complete a statement of expenditures as is possible for the school boards of the five provinces in which a record is available.

6.—Financial Support of the Provincially-Controlled Schools in Canada, by Provinces, 1926-36.

NOTE.—The receipts shown in the following table do not include any amounts raised by loans, or the sale of bonds or debentures, as all revenue of this nature must be repaid ultimately with money raised by local taxation. With the exception of the Maritime Provinces, for which the information is not available, the total debenture indebtedness of the schools of each province is given annually, thus showing the net increase or decrease per year.

¹ Includes contributions to teachers' salaries in the Maritime Provinces; and in New Brunswick, grants made to schools by the Vocational Education Board, since 1921.

² Includes tuition fees where these are recorded.

³ Record not available.

⁴ The Ontario figures include the township grant towards the salaries of rural public school teachers. In the rural municipalities of Manitoba about three-fifths of the school support is equalized by a uniform rate levied over the whole municipality.

7.—Expenditures on Teachers' Salaries, Buildings, etc., Interest, and Maintenance of Boards of Provincially-Controlled Schools, by Provinces, 1926-36.

NOTE.—All amounts in even thousands are estimates.

¹ Not available.² In Manitoba, interest on debentures only.³ Excluding all payments

on principal of debentures and other loans.

⁴ In Alberta "repairs" are included under this heading.

Subsection 2.—Private Schools.

Private Elementary and Secondary Schools.—There are numerous schools in each province doing work similar to that of the ordinary provincially-controlled schools, but which are not publicly financed or administered and hence are not included in Subsection 1 (except in Quebec). Excepting Quebec, the private schools have from about two to four per cent of elementary and secondary pupils in the different provinces. In Quebec the proportion is about ten per cent, but most of them are subsidized by the province and provincial reports include a record of them similar to, and in some cases (as of average daily attendance) inseparable from, the records of publicly-controlled schools. Thus their statistics are of necessity included in Subsection 1. Table 8, however, shows their annual enrolment since 1921, the year in which the Education Branch of the Dominion Bureau of Statistics commenced the collection of reports from private schools. A directory of the schools was published in the "Annual Survey of Education, 1931".

Business Colleges.—There are private schools in fields of education other than elementary and secondary, the most numerous group working in the field of business and commercial education. A record of enrolment from this group also has been collected by the Education Branch of the Dominion Bureau of Statistics since 1921; a summary of this information is presented in Table 9.

Subsection 3.—Higher Education.

The tables of this subsection are intended to include all institutions in the Dominion offering instruction in courses that are the equivalent of at least two years in advance of matriculation. In the table on enrolment the name of each institution is given in the language (French or English) used therein as the main language of instruction. Table 10 gives a summary of the degrees and diplomas granted by the different universities and colleges of Canada, and Table 11 shows the full-time students attending the faculties and courses of instruction offered in each institution. In addition a considerable number of part-time students attended university courses.

Students of University Grade.—The aggregate number of students in attendance was reported as 93,213. Of these 40,959 were of university grade (*i.e.*, following courses for which matriculation was prerequisite) and 34,446 were in attendance at the regular sessions. They were enrolled in about 160 different colleges or universities. Of those attending the full sessions 32,798 were undergraduates, while 1,648 were graduate students, *i.e.*, working toward a higher degree in a subject in which they already held a bachelor degree. Many of the large numbers classed as undergraduates actually held degrees, but not in the subject or faculty in which they were studying during the session under consideration.

More than half of all undergraduate students, or 17,781, are in arts and pure science or what are termed "academic" courses as distinguished from "professional" courses. One or two years of arts is prerequisite to many of the professional courses—in French-language Quebec the full four years. Next to arts and science come engineering and applied science with 3,315 students; medicine, 3,069; theology, 2,015; agriculture, 1,074; law, 963; household science, 858; education, 745; commerce and accounting, 735; pharmacy, 454; dentistry, 381; public health and nursing, 361; veterinary science, 222; music, 222; social service, 127; forestry, 98; architecture 90.

As shown in Table 10, there were 4,274 bachelor degrees granted to men and 1,476 to women, 960 diplomas to men and 1,552 to women. Some of the latter represent completion of courses similar to those for bachelor degrees; after making due allowance for these and for duplication in cases where the same person may be receiving a second bachelor degree in a different branch of study, it may be concluded that there are, each year, about 4,000 new male and 1,400 new female university graduates with a bachelor degree or higher. The graduate degrees granted included 448 master degrees or licences to men and 106 to women, the term "licentiate" being used by the universities of Laval and Montreal in place of the term "master". Those completing the doctorate were 80 men and 5 women; while honorary doctor degrees were conferred on 67 men and 2 women.

10.—Universities and Colleges of Canada: Summary of Degrees and Diplomas Granted, 1934-35.

¹ All degrees except those in theology granted by Dalhousie.

² All degrees except those in

theology entered opposite Toronto.

³ Medical, dental and veterinary doctors included in "bachelor" column.

⁴ The licence in the French-speaking universities is the next degree in advance of bachelor, as the master degree is in the English-speaking.

⁵ Sixty-nine of the doctor degrees were honorary.

Students not of University Grade.—The 40,959 students of post-matriculation standard represent little more than half of the total enrolment in universities and colleges. Many of the arts colleges, including all of the classical colleges of Quebec, offer preparatory courses in which instruction is given in the high school grades, or even elementary grades. These accounted for 22,499 students, practically all of whom were in regular attendance at the full session.

The remaining 29,755 of the enrolment, 16,251 men and 13,504 women, were not following high school courses, but could not be classed as university-grade students as they had not necessarily matriculated. A minority of them attended the full session, generally studying music, household science or agriculture. The remainder were the students of summer courses in teaching methods, series of evening extension lectures, correspondence and other extra-mural courses, agricultural and other short courses.

Apart from the reported enrolment many thousands of people were reached by extension lectures that were not grouped in series and reported as courses, and still larger numbers reached by university radio broadcasts, travelling libraries, agricultural assistance, and various other forms of extension service.

Teaching Staff.—At pp. 858 to 861 of the 1932 Year Book there was published an analysis of the teaching staffs of universities and colleges as in 1929-30, by sex and by full time or part time. Corresponding tables for later years will be found in the "Annual Survey of Education in Canada" obtainable from the Dominion Statistician. *Price 50 cents.*

¹ Includes the arts students of Victoria, Trinity, St. Michael's, and students of the College of Pharmacy.

² The complete full-time enrolment in agriculture, including diploma and degree courses, is 587, household science, 238.

³ Includes students of Manitoba Law School, and 726 students in arts also registered in affiliated arts colleges.

⁴ Included in Arts.

⁵ To this figure should be added 43 students in the architecture section of the Ecoles des beaux Arts in Montreal and Quebec.

Financial Statistics.—Current expenditures were reported at \$17,186,000 in 1935, as compared with \$20,079,000 in 1931. Capital expenditure, which had averaged nearly \$4,000,000 per year in the preceding three years was less than \$1,000,000 in each of the three years 1933-35.

From the standpoint of financial support, there are at least three classes of institutions. First, there are those that rely on grants from provincial treasuries for their upkeep; six of the provinces have such universities and the remaining three have colleges in this class. Secondly, there are the institutions such as Dalhousie, McGill and McMaster Universities, to cite a few, that rely for their support on

of the Regular Session, by Faculties, 1934-35—concluded.

endowments, and do not receive provincial grants. Thirdly, there are colleges either operated or controlled by religious denominations and not receiving provincial assistance; these may not have a financial endowment sufficient to carry them. They may have another type of endowment—in men, so to speak, like the University of Ottawa and other Roman Catholic colleges conducted by religious orders. Since salaries are commonly only nominal in these schools, expenses are comparatively low per pupil accommodated. The other section of the third group—mainly Protestant theological and arts colleges—commonly rely on church contributions where their financial endowments are inadequate.

At pp. 1060-1063 of the 1934-35 Year Book, financial statistics of individual universities and colleges, classifying assets, receipts and expenditures in some detail were given.

Section 2.—Scientific and Industrial Research in Canada.

This section has, in past years, dealt with the history of scientific and industrial research in Canada and has included subsections outlining the organization and work of the National Research Council, and of those provincial councils and private institutions which are primarily interested in research work. During the past year, the operations of these organizations continued to be conducted along the lines described in previous issues of the Year Book, and to conserve space the reader is referred for this information to pp. 866 to 872 of the 1932 Year Book.

Section 3.—The Libraries of Canada.*

It is more than three and a quarter centuries since the first known library came to what is now the Dominion of Canada—the library brought by Marc Lescarbot to Port Royal in 1606. A library was connected with Laval College at its establishment in 1663, although it was many years later before this institution became important. During the next century record is found of several libraries in Quebec city; one of these, a Jesuit library mentioned by Peter Kalm the Swedish traveller (its existence is recorded again in 1789), was afterwards sold to the *Quebec Gazette* and again sold in 1851 to the Library of Parliament. The volumes, which have survived the ravages of time and two fires, may still be found on Parliament Hill at Ottawa. Two other libraries founded in Quebec in the 18th century were a subscription library established in 1779 and the Quebec Legislative Library established in 1792. Four years later a public library was opened in Montreal. The Legislative Library of Upper Canada was established in 1791. The Legislative Library of Prince Edward Island is somewhat older, as it was founded in 1773. The King's College Library, located until recently at Windsor, Nova Scotia, and now at Halifax, dates from 1800, the year of the founding of the oldest existing public library in the Dominion, the library at Niagara. During the first quarter of the 19th century there were several libraries founded in Nova Scotia, several in Montreal, and at least one in Western Canada.

In the first quarter of the 20th century there was much activity in the establishment of libraries for public use. Of the 1,110 existing Canadian libraries for which statistics have been secured, 256 are known to have been established during that period, without regard to the fact that the dates of founding have not been secured for all libraries and the certainty that for one reason or another some libraries have not survived.

Public Libraries.—The 642 public libraries in Canada reported a circulation of 21,138,000 books during 1935. This figure represents the number of volumes lent for home use only, and takes no account of the use of books in reference rooms or reading rooms where about one-third of the work of the larger libraries is done. At the end of the year the combined book-stock of the libraries amounted to 4,849,000 volumes, and the total number of registered borrowers was 1,200,000. Only 386 of the libraries reported that they had any system of classifying their books. Among these the Dewey Decimal system is used by 301, Cutter by 10, Library of Congress by one, while 74 report special systems of their own.

* The latest biennial Survey of Libraries in Canada is for 1935. Copies of the report may be obtained from the Dominion Statistician.

12.—Summary Statistics of Public Libraries, by Provinces, 1935, with Totals for 1933 and 1931.

Yukon.....	3	14,113	12,000	389	561
Totals, 1935	642	4,848,793	21,137,902	1,199,815	448,251

The cost of operating the libraries during the year was \$1,902,691. Of this sum the salaries of the librarians and their assistants accounted for \$951,895, and \$448,251 was spent on books, periodicals and book repairs. About 83 p.c. of the total sum expended was raised by means of taxes levied in the areas served by the libraries. The annual cost of public libraries per person in Canada was 18 cents and the circulation per person was 2 books. In the United States the corresponding figures were 38 cents and 3.7 books; in Great Britain about 26 cents and 4.5 books.

With few exceptions the public library in Canada has always been an urban institution. An attempt is made to provide the rural residents with partial library service through the medium of the "travelling library" and the "open shelf library". Within the past few years, however, experiments to extend an efficient library service beyond the range of individual cities and towns have been successful. In British Columbia, the Fraser Valley Union Library provides a library service for 42,000 people living in an area more than 100 miles in length and of varying widths. The library's book-van links the 125 library agencies into a network covering the whole region. Each municipality included in the scheme is assessed on a basis of 35 cents per capita. Similar regional libraries are being established in the Okanagan valley and on Vancouver island. A province-wide library system now provides free library service for everybody in Prince Edward Island. The 22 branches of the library system bring the library within the reach of 88,000 people scattered over an area of some 2,000 square miles. In some of the Ontario counties, notably Lambton and Middlesex, the existing public libraries have formed County Library Associations. These libraries pool their resources for the purchase of books and by various methods place the books at the disposal of all the libraries in the Association.

Travelling Libraries.—Statistics relating to public library service would not be complete without reference to the travelling libraries (boxes containing from 25 to 80 selected books), which circulate in every province of Canada. The object of travelling libraries is to supplement the book-stock of small public or school libraries and to provide some library service in communities otherwise without any. Three universities, Acadia, Dalhousie, and St. Francis Xavier conduct such a service in Nova Scotia, and McGill University circulates libraries in Quebec and the Maritime Provinces. Each of the five most westerly provinces operates a provincial system of travelling libraries with headquarters at the provincial capital. In Ontario and

Manitoba the Department of Education is in charge of travelling libraries; in Saskatchewan, the Bureau of Publications; in Alberta, the University of Alberta; and in British Columbia, the Provincial Library Commission. In Saskatchewan the provincial service is augmented by libraries sent out by the Saskatoon Public Library, while in Alberta the Lethbridge Public Library circulates boxes of books among the rural schools in the vicinity of the city. The National Chapter of the I.O.D.E. also circulates books through travelling libraries in some provinces. A total of 4,674 libraries were sent out from the various sources in 1935. The average travelling library contained about 50 books.

Open Shelf Libraries.—Open shelf library service, the loaning of specified books by mail to individual borrowers distributed over a wide area, is offered in most of the provinces. In some cases the borrowing is restricted to teachers, clergymen, or other occupational groups. In the four western provinces, however, there are no such restrictions and an open shelf library service is conducted from the same headquarters as the travelling library service.

University, College and Professional School Libraries.—The total contents of the 232 libraries included in this group was 4,116,000 volumes and 433,000 pamphlets. The libraries are primarily for the use of the 65,000 students registered in the institutions and for their 7,000 instructors. During the year the sum of \$289,221 was expended on books, periodicals and book repairs. Of the 149 libraries reporting that they had any system of classifying their books, 80 were using the Dewey Decimal system, 22 the Library of Congress, 6 the Cutter, while 41 reported special systems devised by themselves. (See the section on travelling libraries for the universities offering this form of library service.)

Business, Technical Society and Government Libraries.—The 150 libraries from which statistics were collected contained a total of 2,312,080 volumes and some 535,000 pamphlets. Dominion Government libraries numbered 37 and had an aggregate book-stock of 990,932 volumes. The Library of Parliament is the largest with some 400,000 volumes. There were 790,034 books in the 19 Provincial Government libraries. Thirteen law society libraries and 19 technical society libraries reported 229,202 and 105,135 volumes, respectively. Business or company libraries to the number of 38 contained 105,153 volumes. The remainder of the books were reported by the libraries for the blind, Y.M.C.A. libraries, local historical societies, etc.

Library Schools.—McGill University and the University of Toronto offer a one-year course leading to the degree of Bachelor of Library Science, to graduates of approved universities. The former also offers a short course of six weeks duration; the latter a one-year course in library training to which the minimum requirements for entrance is honour matriculation. Acadia University and the University of Western Ontario give two courses in library science which may be taken for the degree Bachelor of Arts. In the latter, one of the courses is prescribed for all first year students. There are 591 librarians with some library school training employed in Canadian libraries.

Section 4.—Art in Canada.

An article entitled "The Development of the Fine Arts in Canada", contributed by Newton MacTavish, M.A., D. Litt., appeared at pp. 995-1009 of the 1931 Year Book and a shorter article, dealing more particularly with the National Art Gallery at pp. 886-888 of the 1924 Year Book.

CHAPTER XXVI.—PUBLIC HEALTH AND RELATED INSTITUTIONS.

The subject matter of this chapter is treated under the following sectional headings: Section 1.—Administration of Public Health Activities in Canada by the Dominion and Provincial Governments; Section 2.—Institutional Statistics of Public Health and Benevolence where, besides health and hospitalization records, social statistics also receive some attention. The latter are becoming more and more necessary to the proper drafting of social legislation and the study of social problems.

The rapid increase in the numbers committed to our various institutions, such as mental hospitals for the insane, feeble-minded and epileptic; the alleged increase in juvenile crime and the extension of social work in this field; the increasing number of institutions caring for the aged and incurable, as well as for dependent, neglected, and handicapped children, have been marked features of the twentieth century.

Section 1.—Administration.

In Canada public health is administered by the Dominion and Provincial Governments through their respective health departments.

The Dominion Government deals only with such public health matters as are exclusively national, or such interprovincial public health matters as cannot be controlled effectively by the provinces.

In addition, the Dominion Government makes grants to voluntary organizations which are engaged in public health work, notably:—

Canadian Welfare Council; Canadian National Institute for the Blind; Canadian Tuberculosis Association; Canadian National Committee for Mental Hygiene; Victorian Order of Nurses; Canadian Branch of St. John Ambulance Association; Canadian Red Cross Society; Canadian Social Hygiene Council; Canadian Mental Hygiene Council.

With the object of obtaining uniform legislation and procedure in the various provinces the Dominion Council of Health was created. This body consists of the Deputy Minister of the Dominion Department of Pensions and National Health as Chairman, the chief executive officer of the provincial department or board of health of each province, together with such other persons, not exceeding five, as may be appointed by the Governor in Council to hold office for three years. Of these appointed members, four represent agriculture, labour, rural women's work and social service, and child welfare, while the fifth member is a scientific adviser on public health matters. The Council meets twice a year at Ottawa, when public health problems are discussed and uniform standards and legislation adopted.

Speaking generally, the administration of local public health activities and the establishment and maintenance of institutions is in the hands of the Provincial Governments, under Sec. 92 of the British North America Act, 1867. Under their control, municipalities, societies, and individuals generally initiate charitable and humane efforts, depending on the Government to some extent for financial aid and for competent uniform inspection of methods and standards. Important, and reflecting most clearly the benefits accruing from such work, are the provisions for medical inspection of school children. These are carried out in some cases by the district or sub-district medical health officers, and in others by public health nurses whose activities are confined to this work alone. In addition, expert advice and assistance are supplied freely to children, teachers, and parents. In many

cases dental inspection is provided for. While this work has been carried on upon a considerable scale for only a few years, great benefits have already resulted from it, notably general improvement in health and sanitary conditions and in the control and prevention of epidemics.

Public hospitals are the most numerous among health institutions. They are usually erected and supported by the municipalities, their actual administration being in the hands of boards of trustees; their revenue, in addition to that provided by the municipality, is derived from grants from the Provincial Governments, from donations of individuals and societies, and from patients' fees. Admission and treatment are free to all deserving persons who apply for them and whose resources are so limited as to prevent their otherwise receiving proper medical attention, while it is generally expected of others that payments for services shall be made in proportion to costs and their ability to defray them. Such public hospitals include isolation and maternity hospitals, tuberculosis sanatoria, etc. The two lazarettos for lepers are under Dominion administration, as are also veterans' hospitals and certain marine and immigrant hospitals.

Private hospitals do not receive public grants. There are also hospitals, more common in the province of Quebec, which are conducted by various religious orders; Red Cross hospitals and out-posts; and special hospitals which may be privately administered or maintained by the provinces.

Mental institutions, homes for the feeble-minded and the epileptic are in most cases under provincial administration, although in Nova Scotia the insane of each county are cared for in county institutions.

Among charitable and benevolent institutions, orphanages, refuges, and homes for the aged are usually supported by the larger centres and by county municipalities. Homes or schools for the deaf and dumb and the blind are largely under provincial administration.

In the case of penal and reformatory institutions, penitentiaries are administered by the Dominion Government, while reformatories, industrial schools, prison farms, and similar corrective institutions are administered by the Provincial Governments.

Subsection 1.—Public Health Activities of the Dominion Government.

The Act of Parliament (18-19 Geo. V, c. 39, An Act respecting the Department of Pensions and National Health) creating the Dominion Department of Pensions and National Health, clearly defined the functions of that Department, which is divided into two divisions, those of Pensions and National Health. The chief functions of the National Health Section (which from 1919 to 1929 was the Department of Health) are: to protect the country against the entrance of infectious disease; to exclude immigrants who might become a charge upon the country; to treat sick and injured mariners; to see that men employed on public construction work are provided with proper medical care; to set the standards and control the quality of food and drugs, except export meat and canned goods, which are under the Department of Agriculture; to control proprietary medicines and the importation and exportation of habit-forming drugs such as morphine, cocaine, etc.; to care for lepers and to co-operate with the provinces with a view to preserving and improving the public health. The following various Divisions of the Department of Health, existing prior to the merger, are still maintained.

Quarantine Division.—This Division of the Department has for its object the prevention of the entry into the country of quarantinable diseases, *viz.*, plague,

cholera, yellow fever, smallpox and typhus, from ocean-going ships. Quarantine stations are maintained at Halifax, N.S., Saint John, N.B., Grosse Isle, P.Q., William Head, B.C. Every vessel coming from abroad is inspected and passengers or crews who are found to be suffering from quarantinable disease, together with contacts, are removed to the quarantine station after the principles laid down in the Convention of Paris, 1926.

Immigration Medical Division.—This Division is charged with the medical examination and care of immigrants. With this end in view there has been placed in Great Britain, Ireland, and on the continent of Europe a staff of Canadian doctors, whose duty is to examine all intending emigrants to Canada prior to their embarkation. This arrangement obviates the expense, discomfort, disappointment, and hardship occurring hitherto whenever it becomes necessary to deport, on account of physical or mental disability, immigrants who have made the journey across the ocean to Canada.

Leprosy.—For many years there have been in operation in Canada two hospitals for the treatment of leprosy, one at Tracadie, N.B., and the other at Bentinck island, B.C. These are under the direction of the Department.

Marine Hospitals Division.—This Division provides medical and surgical attendance and such other treatment as may be required to all sick and injured mariners arriving at Canadian ports and belonging to vessels that pay sick mariners' dues, in conformity with Part V of the Canada Shipping Act.

Division of Sanitary Engineering.—The activities normally handled under Public Health Engineering include the administration of the Public Works Health Act, which is concerned with the health of men on construction works, canals, railways, and other forms of public works; by agreement with the U.S. Public Health Service, investigations and reports on sources of water supplies for use aboard common carriers in international and interprovincial traffic between Canada and the United States; special investigations and reports regarding pollution of the International Boundary waters in conjunction with representatives of the U.S. Public Health Service; Supervision of water supplies of common carriers on the inland waters of Canada and in international and interprovincial traffic is another function; co-operation with other Dominion Departments *re* sanitation in National Parks and summer camps on Dominion lands and allied matters; with the American Railway Association regarding regulations on sanitation; with the Provincial Health Departments and the U.S. Public Health Service for the certification of water supplies of common carriers in interprovincial and international traffic.

Proprietary or Patent Medicine Division.—This Division operates to give the public a reasonably safe and truthfully labelled proprietary medicine supply. Registration of all secret formula non-pharmacopœial medicines for human use is required, and control is exercised over the potent drugs employed in the manufacture of such medicines and the representations made regarding their use.

Laboratory of Hygiene.—The Laboratory of Hygiene is chiefly concerned with the control of biologic products used in treatment of human diseases, particularly with reference to the potency of certain toxins, antitoxins, and other serological preparations. Sera and vaccines are scrutinized for purity, sterility, and potency. Such drugs as digitalis, strophanthus, ergot, pituitrin, and the salvarsans are examined for potency, and standards for them, based upon those of the League of Nations' Health Committee, are prepared by the Laboratory and furnished to all manufacturers desiring to use them in making their products. Disinfectants are investigated

as to manufacturers' claims for germicidal qualities. Special and general aid is rendered to other departments of government, and research problems are undertaken.

Food and Drugs Division.—In this Division, inspection and laboratory services are maintained primarily for the purposes of the Food and Drugs Act, which is regulatory in character, designed to prevent the importation and sale of adulterated or misbranded foods and drugs. Laboratories in Halifax, Montreal, Ottawa, Toronto, Winnipeg, and Vancouver examine samples taken from suspected stocks. Corrective measures are applied whenever adulteration or misbranding is found. Standards of quality have been established for many products, and the supervision of informative, truthful label declarations is a special objective. Laboratory services are provided for other Divisions of the Department, and co-operation with other departments of government is effectively carried on.

Narcotic Drug Division.—Since the introduction of opium smoking in Canada forty or more years ago the use of habit-forming drugs, such as morphine, heroin, and cocaine, has increased. One of the first steps taken by the Department of Health was the creation of a Narcotic Branch. Through this Branch, the importation and sale of such drugs are controlled in accordance with the principles laid down by The Hague and Geneva Conventions. Wholesale agents and druggists are obliged to keep records of importation or sale and to forward their records periodically to the Department. The legitimate use of these habit-forming drugs is thus controlled.

Subsection 2.—Public Health Activities of the Provincial Governments.*

Prince Edward Island.—The supervision of public health matters in Prince Edward Island was placed, on July 1, 1931, under a specially created Department of Public Health, presided over by a Minister and his Deputy. Two part-time physicians, five full-time public health nurses and two sanitary and food inspectors are employed. Under the direction of the Deputy Minister, the province is divided into five public health districts and each nurse is assigned a territory in which she is responsible for the inspection of school children, home visits, home-nursing classes, immunizing and vaccinating clinics, etc. The sanitary and food inspectors make regular surveys of the food-manufacturing plants, school premises, hotels, boarding houses, restaurants, etc., throughout the province. The Government also operates the Falconwood Hospital for the Insane and the Provincial Infirmary.

In addition the Government subsidizes the Provincial Sanatorium, which has a capacity of sixty beds and has been functioning to capacity since July 1, 1931. In charge of the Provincial Sanatorium is a Medical Superintendent with an assistant and a staff of trained nurses. The Superintendent conducts chest clinics at regular intervals throughout the province as well as a regular weekly clinic in the Sanatorium, where referred cases from physicians are examined.

The Department of Health operates the Provincial Laboratory and a qualified technician is in charge, who examines material forwarded by physicians throughout the province.

Nova Scotia.—In Nova Scotia the Department of Public Health is under a Minister of Health. The Provincial Department, either directly or in conjunction with Municipal Boards of Health, offers certain services which are mainly concerned with control of communicable diseases, milk and water supplies, sewage disposal, pre-natal, post-natal and school hygiene, public health nursing, mental hygiene,

* The material under this heading has been revised by the respective provincial authorities.

distribution of sera and vaccines, vital statistics, health education and supervision of public hospitals, humane institutions and public charities. The Department of Public Health has the administration of mothers' allowances, old age pensions, care of delinquent children and a training school for the mentally deficient.

During the past year a special bureau of sanitary engineering has been established within the Department. The essential purpose of this section is to place further barriers between foci of infection and susceptible individuals. Attention is given to the maintenance and improvement of public water supplies and sewage disposal systems, by consulting with and advising those responsible for the upkeep of such services. Another important activity of the bureau will be the development and supervision of programs for the processing and distribution of milk, for the sanitary condition of food establishments, school buildings, industrial plants, bathing places and other areas where people congregate.

New Brunswick.—The New Brunswick Department of Health includes in its activities general sanitation, including supervision of water supply and drainage, the abatement of communicable diseases, medical inspection of schools, collection of vital statistics, public health nursing service, the administration of the Provincial Pathological and Public Health Laboratory, and the general supervision of the 16 health sub-districts into which the province is divided.

The Department is administered by the Minister of Health, and is under the immediate direction of a Chief Medical Officer. The staff of the Department consists of a chief of laboratories, five district medical health officers, who are also tuberculosis diagnosticians for their respective districts, six medical inspectors of schools, a director of public health nursing service, all being full-time officials. There is also a part-time director of venereal disease clinics. The 16 sub-district Boards of Health into which the province is divided have their own individual staffs of inspectors and registrars of vital statistics, all operating under the Provincial Health Act and Regulations. The Chief Medical Officer in his 19th annual report summarizes the chief activities of the Department during the year ended Oct. 31, 1936, under the headings already given.

Quebec.—The Department of Health, under the control of the Minister of Health, replaced the former Provincial Bureau of Health at the end of the year 1936.

The province of Quebec inaugurated, in 1926, a new system known as the "county health units", consisting of a full-time health service for each county, or group of two or three adjoining counties. At present, thirty-one health units covering forty counties have been organized, with three new counties asking for the same privilege. The former district health officers, reduced to twelve, are in charge of all the counties not yet organized as county health units.

The services of all these officers and their staffs of nurses, sanitary inspectors, etc., are given in the form of consultations, public lectures, school medical inspections, baby and travelling tuberculosis clinics, and investigations of all kinds, immunization, sanitation, etc.

In addition to an Administrative Division, the Ministry of Health maintains the following Divisions: Laboratories, Sanitary Engineering, Demography, Mental Hygiene, Public Charities, Health Units and Districts, and Epidemiology. The control of venereal disease and tuberculosis is also undertaken and the Grancher system of foster homes has been introduced. The two Divisions created last year, namely, the Division of Industrial Hygiene and the Division of Hygiene of Nutrition are now in operation, the latter includes maternal and child welfare.

The energies of the Ministry of Health are also directed towards the prevention of epidemics, more particularly tuberculosis and the more important causes of infant mortality. To this end, the Ministry has established twenty-one anti-tuberculosis dispensaries and seventy baby clinics, including those receiving government grants. During the year 1935-36, in the anti-tuberculosis dispensaries and the travelling tuberculosis clinics, more than 58,000 people were examined. The various county health units have provided for the immunization of 18,514 children against diphtheria, which, with those previously immunized, make a total of 219,566.

Ontario.—The Department of Health of Ontario is under a Minister of the Government. In the direction of the Department's program, he is assisted by a Deputy Minister. These activities are appropriately divided into the following divisions, namely: hospitals, sanitary engineering, laboratories, preventable diseases, maternal and child hygiene and public health nursing, oral hygiene, tuberculosis prevention, industrial hygiene, inspection of training schools for nurses.

The local health work is carried on by a Board of Health and a Medical Officer of Health in each of the 900 municipalities. Ten cities have whole-time health officers.

The Department assumes the responsibility for the free distribution of biological products used in the prevention and cure of preventable diseases. Insulin is distributed to those in need of such treatment on the recommendation of the local authorities; a percentage of the cost is contributed by the local municipalities. The maximum in the way of bacteriological service, including the examination of pathological tissue, is offered through the central laboratory and the six branch laboratories, which are situated at appropriate centres throughout the province. Consultative service in the field of mental hygiene is made available through clinics which operate throughout the province. A regular schedule is maintained by these clinics and the profession is urged to take advantage of the service offered.

The increased public interest in the prevention of tuberculosis has justified the large measure of emphasis placed on this phase of the Department's program some fifteen months ago. The Department has continued its program of attempting to make both diagnosis and treatment of cancer possible for all. Seven cancer clinics are operating in well-chosen centres in the province; each of these is substantially subsidized by the Department.

Manitoba.—Manitoba has an organized Department of Health and Public Welfare. The Health and Public Welfare Act states that the Minister shall preside over and have the management and direction of the Department, and the Department shall have administrative jurisdiction over all matters in the province which relate to health and public welfare. The various Divisions of the Department include those of: Disease Prevention (food and dairy inspection, public health nursing, sanitation, venereal disease prevention, communicable diseases); Provincial Laboratories; Vital Statistics; Hospitalization; Psychiatry (Selkirk and Brandon Hospitals for Mental Diseases—Manitoba School for Mentally Defective Persons, Portage la Prairie—Psychopathic Hospital, Winnipeg); Child Welfare; Estates of Insane Persons and Indigency in Unorganized Territory; Supervision of Aged and Infirm Persons (being supported by public funds); Supervision of Medical Service (supplied by the province).

The previously established Board of Health and the Welfare Supervision Board have assumed an advisory capacity to the Minister of Health and Public Welfare;

and the Child Welfare Board is both advisory and administrative, being responsible for the administration of the Child Welfare Act.

Saskatchewan.—The Department of Public Health has been organized since 1923 under a Minister and a Deputy Minister. The Public Health Act of Saskatchewan also provides for a Public Health Council, consisting of the Deputy Minister as Chairman, three medical practitioners, a veterinary surgeon and a civil engineer. This Council acts in an advisory capacity to consider new health regulations and allied problems.

The Department is organized into seven Divisions. The Division of Administration, directly under the Deputy Minister who is also the Registrar General and Director of Hospital Management, co-ordinates the activities of the Department as a whole, directs the general policy in public health matters, supervises finances, legislation, hospital grants, municipal boards of health, relief of destitutes, and medical relief in certain unorganized territories. The Division of Maternal and Child Welfare and Public Health Nursing, under the direction of a Medical Officer, assisted by a Director of Nursing Services, supervises maternity grants, organizes inspection of school children and home visits, pre-school and preventive clinics in co-operation with local physicians and conducts a public health nursing service throughout the province. The Division of Communicable Disease deals with epidemiology in all its phases and administers the regulations governing cemeteries and care and transportation of the dead. Supervision of trachoma, venereal diseases, and tuberculosis (other than the organization of the Anti-Tuberculosis League) also comes under this Division. The Division of Sanitation supervises food, water, milk and ice supplies, sewerage systems, urban and rural sanitation, and the organization of union hospital districts. The Division of Laboratories includes in its organization bacteriology, serology, pathology, chemical analyses, and medico-legal work. The Office of the Registrar General (formerly the Division of Vital Statistics) administers the Vital Statistics Act and the Marriage Act. The system used in classifying vital statistics has been decided upon in co-operation with other provinces and the Dominion Bureau of Statistics. The Mental Hygiene Act and the mental institutions established under its provisions in North Battleford, Weyburn, and Regina (psychopathic ward), are administered by the Department, and the internal operations of these institutions are supervised by the Commissioner of Mental Services.

Union Hospitals.—In Saskatchewan, in addition to the general hospitals, there exists a system known as the Union Hospital Organization, designed to furnish hospital accommodation in rural districts. Under the provisions of this plan, two or more municipalities may co-operate in building, equipping, and maintaining a hospital. Municipalities constituting a hospital district may enter into an agreement with the hospital board to provide free treatment for certain classes of patients at the cost of the municipalities concerned.

Cancer Commission.—This Commission, created in 1930, consists of the Deputy Minister of Public Health as Chairman, together with two physicians as members and a physician as secretary. Consultative diagnostic and treatment clinics have been established in Regina and Saskatoon, and radon is manufactured at an emanation plant in Saskatoon. Close contact is maintained with current advances in the prevention, diagnosis, and treatment of cancer.

Health Services Board.—This Board consists of the Deputy Minister as Chairman, a representative of the provincial College of Physicians and Surgeons and a representative of the Association of Rural Municipalities. The Board is inquiring

into the extent and administration of the various health services existing in the province, collecting and studying data on the general situation regarding incidence of illness from all causes, considering methods for an equitable distribution of the costs of illness, studying the needs of the people with respect to general health services and the necessity of co-ordination of those now existing. An advisory committee is associated with the Board.

Alberta.—The Department of Public Health was established by an Act of the Provincial Legislature in 1919. The Department includes the following Divisions: Communicable Diseases; Sanitary Engineering and Sanitation; Public Health Education; Laboratory; Public Health Nursing; Hospitals, Municipal Hospitals; Hospital Inspection; Social Hygiene; Vital Statistics; Mental Hygiene; Dental Hygiene; and the following institutions: the Central Alberta Sanatorium; the Provincial Mental Hospital, Ponoka; the Provincial Training School, Red Deer; the Provincial Auxiliary Hospital, Claresholm; and the Provincial Mental Institute, Edmonton.

Free clinics for venereal diseases are maintained in the principal cities and in the two provincial gaols. Educational work on social hygiene is carried on by means of lectures, moving pictures, bulletins, and radio talks.

British Columbia.—The Provincial Board of Health, responsible to the Provincial Secretary, administers the laws relating to public health in British Columbia. Its Branches comprise the following: Sanitation, Venereal Clinics, Laboratories, Tuberculosis, Infectious Diseases and Public Health Nursing, and Vital Statistics. The Sanitation Branch has directed numerous recent efforts to the prevention of the spread of communicable diseases by touring motorists, and to the control of campers and squatters along the coast. The Laboratories Branch, in addition to the analysis of specimens, distributes various vaccines and antitoxin. The Tuberculosis Branch has been very much enlarged, the province being organized into districts under the direction of a medical officer and specially trained public health nurses. The educational part of the work is accentuated, and home visits are emphasized in order to educate the people to the dangers of infection.

Section 2.—Institutional Statistics.*

Under authority granted by the Dominion Government in 1930, the Dominion Bureau of Statistics now co-operates with the provincial authorities through its newly created branch of the Census of Institutions, and collects, on a Dominion-wide basis, statistics for the following types of institutions: (1) *hospitals*—institutions primarily engaged in the prevention and cure of physical sickness and disease, such as hospitals for the sick, sanatoria and institutions for incurables; (2) *mental and neurological institutions*—for the treatment and care of mental ailments, such as asylums for the insane, institutions for the feeble-minded, epileptic, etc.; (3) *charitable and benevolent institutions*—caring for the poor of both sexes and of all ages, such as homes for the aged, county refuges, orphanages, etc.; and (4) *penal and corrective institutions*—having for their purpose the reclamation of the criminal and the reformation and training of delinquent boys and girls. Institutional statistics, as summarized in Table 1, may, therefore, be regarded as dealing with the four main types of social pathology, *viz.*, physical, mental, economic, and moral. They provide a body of statistical data which affords to students of social problems a fairly comprehensive view of institutional life in Canada.

* This section has been revised by J. C. Brady, Officer in Charge of Census of Institutions, Dominion Bureau of Statistics.

Historical.—A brief historical sketch of the origin and growth of the several classes of institutions in Canada was given at pp. 1006-1009 of the 1936 Year Book.

Subsection 1.—Statistics of Hospitals, other than Mental.

The total number of various general hospitals in operation in Canada during 1935 is given in the first part of Table 1. It is seen from that table that in addition to 611 public general hospitals there were 267 private general hospitals and 32 hospitals operated by the Dominion Government made up of: 8 for war veterans, 5 quarantine and immigration, 1 marine and 2 leper hospitals under the direction of the Department of Pensions and National Health; 9 military hospitals

under the Department of National Defence; and 7 hospitals for Indians under the Department of Indian Affairs.*

Summary statistics of reporting hospitals, which included 99·6 p.c. of all hospitals in 1935, are presented for the years 1932 to 1935 in Table 2, and detailed statistics of staff, facilities, and movement of patients are shown by provinces in Table 3.

* A complete list of all hospitals in Canada, giving name, location, type, bed accommodation, etc., will be found in the new Hospital Directory for Canada, 1935, issued by the Dominion Bureau of Statistics.

¹ These institutions are classified in Table 1.

Out-Patient Departments.—Out-patient departments, or clinics, are operated independently or in connection with hospitals, medical colleges, universities, or other institutions. The dispensary or clinic in connection with a hospital is generally the out-patient department treating patients who do not occupy beds in the hospital. Sometimes, however, the out-patient department is distinct from the hospital proper and is a separate institution with its own staff, etc. The extension of out-patient services to patients of modest means has far-reaching and beneficial effects. It may replace admission to a hospital, or may serve to secure necessary and beneficial hospitalization. As a general rule, out-patient departments are subsidized from the funds of the general hospital and separate records are not kept. Until a uniform system of accounting is adopted, it will not be possible to give the average cost per patient.

Table 4 gives the hospitals of each class operating public out-patient departments in Canada, by provinces, 1935.

4.—Public Hospitals Operating Out-Patient Departments, 1935.

Subsection 2.—Statistics of Mental Hospitals.

The Census of Mental Institutions of Canada for June 1, 1931, gave the number of patients in all mental institutions as 31,686, of whom 24,188 were insane, 7,006 mentally deficient, and 492 epileptic. The number of patients in mental institutions per 100,000 of the general population was 305.4 on June 1, 1931, 316.5 on Dec. 31, 1932, 324.9 on Dec. 31, 1933, and 335.6 on Dec. 31, 1934.

At Dec. 31, 1935, there were 38,261 patients in mental institutions in Canada, and 2,955 on parole, making a total of 41,216, whereas the normal bed capacity was only 35,987, showing a seriously overcrowded situation over a period when the patient population on Jan. 1, 1935, and the admissions and separations during the year are considered. This overcrowded condition is specially marked in British Columbia, Manitoba, Saskatchewan, Ontario, and Quebec, as is seen from Table 6. Of the 38,261 resident patients in 1935, 30,208 were insane, 7,271 were mentally deficient, 601 were epileptic, and 181 mental cases were otherwise classified. The patients per 100,000 of population at the end of the year were 348.2. Table 5 gives general statistics of mental institutions for 1935.

Subsection 3.—Charitable and Benevolent Institutions.

Statistics of institutions which care for the indigent, the aged and infirm, orphans, dependent and neglected children, the deaf and dumb and the blind, are shown by provinces in Table 7. Such statistics are now collected quinquennially and figures for 1931 will be found at page 1018 of the 1936 edition of the Year Book.

**Subsection 4.—Penitentiaries and Corrective and Reformatory
Institutions.**

Summary statistics under this heading collected at the Census of 1931 were given at page 1019 of the 1936 edition of the Year Book. These statistics are now being collected quinquennially and figures for 1936 are given in Table 8. The reader will find detailed statistics of crime and delinquency (which are presented on an annual basis) as distinct from these institutional statistics in Chapter XXVII immediately following this chapter.

³ There are no institutions of this class in Prince

Section 3.—The Victorian Order of Nurses.

The Victorian Order of Nurses was created in 1897 for the definite purpose of establishing trained nurses in localities such as villages and townships remote from hospital centres. With the growth of the Order, the field of activity was broadened to meet the demands of health and social agencies in the large centres of population, but the main work of the Order is still carried out in the villages and rural areas of population.

The primary function of the Victorian Order is bedside nursing and teaching of health in the homes visited. Three types of care are given by the nurses, *viz.*, maternal and infant welfare, general nursing and health education. During 1935, the Order had 318 trained nurses in the field with 79 branches, distributed as follows: Nova Scotia, 14; New Brunswick, 5; Quebec, 6; Ontario, 43; Manitoba, 1; Saskatchewan, 2; Alberta, 2; and British Columbia, 6. During 1935, 751,350 visits were made to 85,374 patients, which was an increase of 25,972 visits and 6,100 patients over the figures for 1934. The average number of visits per case was 8.8. Of the total visits paid, 439,540 or 58.5 p.c. were free, while fully-paid visits constituted 27.3 p.c. (of which 17.6 p.c. were insurance cases) and part-paid visits 14.2 p.c. Maternal and welfare cases constituted 54.9 p.c. of the total visits paid.

The maternal death rate per 1,000 living births attended by Victorian Order nurses for the past five years was 2.0. Total receipts of the local associations amounted to \$657,302 and total expenditures to \$617,978.

Section 4.—The Canadian Red Cross Society.*

Closely allied with the Dominion and Provincial Governments in activities to promote the health of the people is the Canadian Red Cross Society. Founded in 1896, its purposes are (1) to furnish volunteer aid to the sick and wounded of armies in time of war, and (2) in time of peace to carry on and assist in work for the improvement of health, the prevention of disease and the mitigation of suffering.

The more important phases of the peace-time work carried on by the Society are (a) the continuing care of sick and disabled ex-service men, (b) the operation of Red Cross outpost hospitals, (c) the promotion of Junior Red Cross and the treatment of crippled or otherwise disabled children, (d) the maintenance of a disaster relief organization fully prepared for immediate action in any emergency, (e) the organization of classes for the study of home nursing and nutrition, (f) the care of immigrant women and children at the Port of Halifax, (g) the training and supplying of visiting housekeepers for families when the homemaker is ill, (h) co-operation with government departments and other voluntary organizations in the combating of disease, the promotion of child welfare, and the care of the physically defective, (i) in general, provision for the needs of the distressed and destitute.

Since the inception of the peace-time program in 1920, the Red Cross Society has established outpost hospital service in 66 centres in Canada's northland. Twenty-four of these have been handed over to their communities, four have been found no longer necessary, and in 1936 there were thirty-eight outpost hospitals operating under the emblem of the Red Cross. In 1936, Red Cross outposts cared for 33,009 patients, of which number 6,148 were in-patients with a total of 63,966 hospital days'

* Revised by W. S. Caldwell, M.D., Assistant Director, Ontario Division, The Canadian Red Cross Society, Toronto.

treatment. Without the aid of these outposts, thousands of our fellow-citizens who gain their livelihood on the fringes of the settled parts of Canada would have lacked any kind of skilled assistance when sickness or injury overtook them.

Junior Red Cross, a movement for the children of elementary and sometimes secondary schools, is devoted to the promotion of the principles of health, good citizenship and international friendliness. Guided only by the teacher-mentor, the children work out their own program of personal and school hygiene, community service, and interchange of handicrafts and information with the Juniors of other lands. Though primarily an educational movement, it is significant that since its inception, the Canadian Junior Red Cross has helped over 12,000 crippled or otherwise disabled children. Junior Red Cross now embraces a membership of over fifteen million children in 51 nations of the world. In Canada for the school year 1935-36, 10,877 branches were enrolled with a total membership of 333,543.

The consolidated financial statement of the Society for 1936 showed total receipts of \$1,062,033.86, of which \$801,314.03 consisted of voluntary contributions. Gross expenditures were \$1,015,268.95, of which the major items were \$239,129.58 for the outpost hospitals, \$118,281.13 on assistance to soldiers and their dependants, \$40,198.70 for the treatment of crippled children, \$79,997.64 on general relief, \$44,851.91 on the organization of the Junior Red Cross, and \$279,449.88 on disaster relief.

CHAPTER XXVII.—JUDICIAL AND PENITENTIARY STATISTICS.*

Canadian Criminal Law and Procedure.—An account of the development of the Criminal Code in Canada was given at pp. 1085-1087 of the 1934-35 edition of the Year Book. In this article a résumé of procedure and of the extent and jurisdiction of the various classes of judges and magistrates was given.

The statistics presented in the tables that follow, which are summarized from the Annual Report of Statistics of Criminal and Other Offences, are collected directly from the criminal courts in the different judicial districts throughout the Dominion. There are 154 judicial districts, including 4 sub-districts, divided as to provinces as follows: Prince Edward Island 3, Nova Scotia 18, New Brunswick 15, Quebec 23, Ontario 47, Manitoba 6, Saskatchewan 19, Alberta 14, British Columbia 8, and Yukon 1. The figures for the Northwest Territories are obtained from the reports of the Royal Canadian Mounted Police.

Section 1.—General Tables.

The collection and publication of criminal statistics now made by the Dominion Bureau of Statistics was initiated in 1876 (Act 39, Vict. c. 13). All records of crime in that period are now available in publications of the Judicial Statistics Branch of the Bureau. The statistics relate to years ended Sept. 30, the latest report being for 1935. Beginning with the report for 1922, an enlargement of the classification of offences has been adopted, by which offences of juvenile offenders are compiled separately from those of adults.

Crime is divided into two definite classes, "criminal" or "indictable offences", which include all serious crime covered by the Criminal Code (see Section 2 below), and "summary" or "non-indictable offences", which comprise breaches of municipal by-laws, traffic laws and other less serious crimes (see Section 3 below). Broadly speaking, indictable offences are triable by jury, although in certain cases the accused is accorded the right of election as to whether he be tried by jury or before a judge without the intervention of a jury, and in other cases the jurisdiction of the magistrate as to trial is absolute and does not depend upon the consent of the accused. Non-indictable offences are usually dealt with summarily by police magistrates under the Summary Convictions Act, and comprise breaches of municipal regulations and other minor offences. The term "indictable" applies to offences of adults only, similar offences committed by juveniles being termed "major" offences; similarly, "non-indictable" offences of adults are termed "minor" offences when attributed to juveniles. Returns of criminal court proceedings for the year ended Sept. 30, 1935, show that 402,148 trials were held as compared with 366,152 during the previous year. The figures show 39,506 indictable and 362,642 non-indictable cases, as compared with 37,408 indictable and 328,744 non-indictable cases during the previous year. Of the indictable offences, 33,531 were convictions as compared with 31,684 during 1934. The 33,531 convictions during 1935 are comprised of 30,195 males and 3,336 females. In 1934, 28,539 males and 3,145 females were convicted.

Previous to 1922, however, the classification into criminal and minor offences was followed in classifying statistics; the historical Table 1 and the more detailed

* Revised by H. M. Boyd, Chief, Judicial Statistics Branch, Dominion Bureau of Statistics. The sixtieth Annual Report of Statistics of Criminal and Other Offences, for the year ended Sept. 30, 1935, is obtainable on application from the Dominion Bureau of Statistics.

short-term statistics of Table 2 continue the classification on a comparable basis, giving the totals for all offences, *i.e.*, different classes of criminal offences and minor offences, *including those of juvenile delinquents*. In connection with Table 1, it should be remembered that, while the Criminal Code undergoes little change over periods of time, the figures of summary convictions are influenced very much by the changing customs of the people, and are apt to increase with the increasing urbanization of the population. The most significant column of this table is the figure of criminal offences per 100,000 of population. Attention may be drawn to the increase in the proportion of both criminal offences and minor offences to population in recent years, convictions for criminal offences having risen from 284 per 100,000 population in 1921 to 425 in 1931 and 420 in 1935, and convictions for minor offences from 1,732 per 100,000 in 1921 to 3,113 in 1931 and 3,472 in 1935.

It should be understood that the classification of offences in these general tables is irrespective of the mode of procedure. That is to say, the "criminal" cases include many indictable offences disposed of summarily under the Summary Trials Act. Hence any addition of indictable and major and minor offences, as shown in other tables, will not agree with the figures given in Tables 1 and 2. The object here is to show a broad historical record of criminal and minor offences, respectively.

Pardons.—The total number of cases in which the prerogative of mercy was exercised during 1935 was 1,621. Of these, 64 were not imprisoned, and were granted remittance or reduction fines, etc. Seven hundred and seventy were released on "Ticket of Leave" and 689 were released unconditionally, 63 were deported, 70 fines were remitted or reduced; 5 death sentences were commuted and 87 cases disposed of in various other manners. These figures relate to the judicial year ended Sept. 30, and are therefore not comparable with those given in Section 6, Penitentiary Statistics.

The recent trend of total convictions, including those of juveniles, and of sentences imposed, is shown by provinces for the years 1929 to 1935 in Table 3. Death sentences, which numbered 28 in 1919 and 26 in 1920, dropped to 19 in 1928, rose again to 26 in 1929, then dropped to 17 in 1930, rose again to 25, 23, and 24 in 1931-33, dropped to 19 in 1934 and to 15 in 1935. Increases in the number of convictions are shown for 1935 in Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario, Alberta, British Columbia, and the Territories. Decreases are noted only in Manitoba and Saskatchewan.

Section 2.—Indictable Offences of Adults.

The progress of a community, from the moral point of view, is often judged by the number of convictions for indictable offences, as these are less affected than non-indictable offences by extraneous circumstances and the varying methods of law enforcement in different areas and in different years. However, in the study of such statistics it is important to have comparable figures over a period of years, and these are set out by provinces for each year since 1911 in Table 4. Again, in Table 5 are shown the numbers of charges and convictions and the percentages of acquittals for the three years ended Sept. 30, 1933-35.

It may be stated that during the thirty-five-year period from 1900 to 1935 crimes increased from 4,853 to 33,531 or 591 p.c. The increase in the population during the same period was but 106.3 p.c., revealing that the increase in the crime rate was between five and six times that of the population.

4.—Convictions of Persons 16 Years of Age or Over for Indictable Offences, by Provinces, years ended Sept. 30, 1911-35.

NOTE.—For figures for 1900-10, see p. 1016 of the 1933 Year Book.

Year.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Yukon.	N.W.T.	Total.

In Table 5, which shows charges, convictions and acquittals, by provinces, convictions for indictable offences show increases in Nova Scotia, New Brunswick, Quebec, Ontario, British Columbia, and the Territories. Prince Edward Island, Manitoba, Saskatchewan, and Alberta show decreases from the previous year's totals.

5.—Charges, Convictions and Percentages of Acquittals for Indictable Offences, by Provinces, years ended Sept. 30, 1933-35.

Classes of Indictable Offences and Analyses of Convictions.—Indictable offences are divided under the Canadian system into six main classes, as shown in Table 6. The increase in total convictions from 31,684 in 1934 to 33,531 in 1935, a total of 1,847, is accounted for by increases in Classes I, III, V, and VI; these more than nullify decreases in Classes II and IV.

Class I (Offences against the Person) shows an increase of 397, or 11 p.c., in 1935 over 1934. In this class, all forms of assault, procuration, shooting and wounding, attempted murder, non-support and miscellaneous offences against the person, show increases in 1935 as compared with 1934.

In Class II (Offences against Property with Violence), 91, or slightly over 2 p.c., fewer convictions were made in 1935 than in 1934, although an increase is shown in the number of convictions for robbery.

For Class III (Offences against Property without Violence) there is an increase of 308 convictions, or 1.9 p.c., in 1935 compared with the 1934 figure. Theft and false pretences account for most of the convictions in this class and both these groups show reductions for 1935. Feloniously receiving stolen goods accounts for an increase of 295 convictions and theft of automobile an increase of 195.

In Class IV (Malicious Offences against Property), 45 fewer convictions than during the preceding year were recorded in 1935, a decrease of 9.3 p.c.

Convictions for offences in Class V (Forgery and Other Offences against the Currency) increased from 690 in 1934 to 910 in 1935. The 220 increase represents nearly 32 p.c., and is the highest proportional increase shown in any class during the year. Both crimes in this category, forgery and offences against currency, show high rates of increase during the year.

Class VI (Various Offences), including crime not classified in the preceding five classes, shows 1,058, or over 15 p.c., more convictions in 1935 than in the preceding year. Convictions for offences against gambling and lottery Acts and the keeping of bawdy houses are marked by substantial increases but there are decreases in convictions for operating illicit stills, intimidation, conspiracy, breaches of the Opium and Narcotic Drug Act, and perjury and revenue laws during 1935.

Details by offences are given in Table 6 and the details of the disposition of the charges in Table 7, which shows, with other information, that convictions of females numbered 3,336 in 1935 as against 3,145 in 1934 and 3,477 in 1933; as recently as 1924 the figure was only 1,826. Details as to occupation, conjugal condition, educational status, age, use of liquors, birthplace, religion, and residence of those convicted of indictable offences are given in Table 8.

6.—Indictable Offences, by Classes, years ended Sept. 30, 1933-35.

NOTE.—The figures of this table do not include charges or convictions of juvenile delinquents.

¹ Notwithstanding the fact that the United Church of Canada was completely organized in 1926, these persons still reported themselves as Methodists.

Section 3.—Summary Convictions of Adults.

The following statistics relate to "non-indictable" offences committed by adults (persons 16 years of age or over) and disposed of by police magistrates or other justices of the peace, under authority of the Summary Convictions Act. Such convictions numbered 362,642 during the year ended Sept. 30, 1935, an increase of 33,898, or 10.31 p.c., compared with 1934. Every province, with the exception of Manitoba, showed an increase in the total of convictions for non-indictable offences

9.—Summary Convictions, by Provinces, years ended Sept. 30, 1911-35.

NOTE.—For figures for 1900-10, see p. 1020 of the 1933 Year Book.

The marked increase in the past eight or nine years has been due almost entirely to breaches of traffic regulations, which have risen from 78,027 in 1926 to 246,123 in 1935, or from 46 p.c. to nearly 67 p.c. of the total of summary convictions. Nevertheless, convictions for vagrancy, drunkenness, and breaches of by-laws all show greater percentage increases for 1935 than breaches of traffic regulations. Offences against gambling Acts and against liquor legislation show substantial decreases. By sexes, the summary convictions appear as follows: in 1926, males 159,528, females 10,385; in 1930, males 292,557, females 16,202; in 1931, males 312,111, females 15,667; in 1932, males 281,318, females 16,591; in 1933, males 275,229, females 17,444; in 1934, males 311,542, females 17,202; and in 1935, 339,494 males and 23,148 females.

Convictions for Drunkenness.—The number of summary convictions for drunkenness in Canada in 1935 was 25,643 as compared with 38,826 as recently as 1929. Maximum figures were attained in the years 1913 and 1914; during the War there was an appreciable reduction and since the War, while figures have fluctuated, they have not approximated former high levels. Table 11 shows the number of convictions by provinces and years from 1911 to 1935. On both a numerical and a percentage basis, increases in convictions for drunkenness were greater in Ontario during 1935 than in any other province.

11.—Convictions for Drunkenness, by Provinces, years ended Sept. 30, 1911-35.

NOTE.—For figures for 1900-10, see p. 1021 of the 1933 Year Book.

Offences against the Liquor Acts.—Until the Great War, alcoholic liquors were generally sold under specified conditions by licensed hotels or licensed shops. Offences against the liquor Acts usually represented a breach of the conditions of sale. During the War, prohibition was generally established but in more recent years the tendency has been for the Provincial Governments to take over the sale of liquor through commissions and derive a revenue therefrom (see pp. 626-629). Eight of the nine provinces now have their liquor commissions, Prince Edward Island being the only province in which prohibition prevails. In these circumstances, the convictions for offences against the liquor Acts in 1929 reached the highest figure on record, *viz.*, 19,327, but have since fallen off to 8,826 in 1935. The number of such convictions in each year since 1911 is given by provinces in Table 12. Alberta is the only province showing an increase for 1935.

12.—Convictions for Offences against the Liquor Acts, by Provinces, years ended Sept. 30, 1911-35.

NOTE.—For figures for the years 1900-10, see p. 1022 of the 1933 Year Book.

Breaches of Traffic Regulations.—Convictions for breaches of traffic regulations (Table 13), which at the beginning of the century numbered only 185 in all Canada have, as a result of the growing density and increasing use of motor vehicles, become the largest element in the non-indictable offences. Such convictions reached a record total of 246,123 in 1935, when they represented 67 p.c. of the total of 362,642 (see Table 9) summary convictions. Convictions for breaches of traffic regulations in 1935 show increases in all provinces with the exceptions of Manitoba, Alberta, and British Columbia.

13.—Convictions for Breaches of Traffic Regulations, by Provinces, years ended Sept. 30, 1911-35.

NOTE.—For figures for the years 1900-10, see p. 1023 of the 1933 Year Book.

1935.....	101	760	609	69,671	153,142	11,664	1,720	2,669	5,787	—	—	246,123

For the year 1935, Ontario, which had 48 p.c. of the registrations of motor vehicles in Canada (see p. 668), had 62 p.c. of the total convictions; Quebec in the same year had 15 p.c. of the motor vehicles and 28 p.c. of the convictions; and Manitoba 6.1 p.c. of the motor vehicles and 4.7 p.c. of the convictions. In interpreting the figures in this way, however, it should be pointed out that traffic regulations are by no means uniform throughout Canada and no account is taken of the differences in the degrees of urbanization in the provinces. Thus, the above three provinces contain large centres of population, while in the Maritime Provinces, Saskatchewan, and Alberta, with a lower degree of urbanization, convictions were low in proportion to the number of motor vehicles registered.

Section 4.—Juvenile Delinquency.

Juveniles under 16 years of age to the number of 7,679 were found guilty of various offences in the year ended Sept. 30, 1935, as compared with 7,806 in 1934, 7,453 in 1933, 7,363 in 1932, 7,768 in 1931, 8,425 in 1930, 7,826 in 1929, 7,699 in 1928, 8,185 in 1927 and 7,831 in 1926. Of the 1935 total, 5,514 were convicted of "major" offences and 2,165 of "minor" offences, terms which correspond very nearly to "indictable" and "non-indictable" offences, as applied to adults. The offences proven against juveniles in 1934 and 1935 are shown by provinces in Table 14.

Major Offences.—In Table 15 are shown the various major offences for which juvenile delinquents were convicted from 1929 to 1935. It will be observed that theft, house- and shop-breaking with theft, and other wilful damage to property account for the great bulk of the offences; in 1935, 92 p.c. of the major offences were of this character.

Minor Offences.—Of the 2,165 juvenile delinquents found guilty of minor offences in 1935, 402 were convicted of breaches of municipal by-laws, 312 of disorderly conduct and disturbing the peace, 495 of disobedience or incorrigibility, 217 of trespass, 234 of truancy, 195 of vagrancy and indecent language and 310 of other minor offences.

Section 5.—Police Statistics.

Police statistics were collected in 1935 from 161 cities and towns of 4,000 population or over in 1931, aggregating a total of 4,432,750 persons. The total number of police was 5,231, which is an average of one policeman to each 847 persons in the population of those cities and towns.

The returns show a total of 365,540 crimes known to have been committed; 95,280 arrests were made and 188,493 summonses issued. The prosecutions numbered 276,873 with 238,551 convictions.

Automobiles reported stolen numbered 8,556 during 1935, of which 8,513 or 99.5 p.c. were recovered; 12,664 bicycles were stolen with 6,747 or 53.3 p.c. recovered. The value of other goods reported stolen was \$2,114,720 with \$981,608 or 46.4 p.c. recovered. There were 40,724 automobile accidents reported to the police, and 346 deaths and 40,724 injuries resulted from such accidents. Other accidents reported resulted in the death of 676 persons and injuries to 5,071.

¹ Revised since the publication of the 1936 Year Book.

Section 6.—Penitentiary Statistics.*

The Penitentiaries Branch of the Department of Justice is charged with the administration of the various penitentiaries of Canada. Seven institutions are included in the system, the two largest of which are at Portsmouth, Ont., and St.-Vincent de Paul, Que., while the other five are at Dorchester, N.B.; Prince Albert, Sask.; Stony Mountain, Man.; New Westminster, B.C.; and Collins Bay, Ont. During the fiscal year ended Mar. 31, 1936, the average daily population of these institutions was 3,148 and the total net cash outlay for the year was \$2,307,739 or

* Penitentiary statistics are also summarized from the institutional side at pp. 997-993.

\$2.01 per convict per diem, compared with 3,895 average daily population and \$2,585,702 total net cash outlay or \$1.82 per convict per diem for the year 1935.

The special penitentiary for Doukhobors on Piers island, which was administered under the warden of the penitentiary at New Westminster, was in operation from 1932 to Mar. 28, 1935, when the 39 remaining inmates were transferred to New Westminster. The statistics of this special penal colony are included with those of the regular penitentiaries in the following tables, and the reader is referred to p. 1035 of the 1936 Year Book for details of the Piers Island colony, given by sex, age, race, and conjugal condition.

Female convicts are kept in the penitentiary at Portsmouth, a suburb of Kingston, where special quarters and staff are maintained for their detention and supervision. Female convicts in custody there on Mar. 31, 1936, numbered 30 compared with 40 in 1935 and 46 in 1934.

Movement of Population of Penal Institutions.—Penal institutions may be classified under four heads: (1) penitentiaries, with slow turnover, since prisoners have long sentences; (2) reformatories for boys and (3) reformatories for girls, also with rather slow turnovers, but more rapid in the case of boys than in that of girls; and (4) common gaols, where the turnover is extremely rapid. If the average population for the year be the average of the inmates at the beginning and end of the year, and the number discharged be the turnover, the turnover in 1935 was: in penitentiaries, 55 p.c.; in reformatories for boys, 224 p.c.; in reformatories for girls, 80 p.c.; in gaols, no less than 1,455 p.c. Thus, the average time spent in gaol was about three weeks. In dealing with these figures it must be borne in mind that the common gaol population changes from day to day, and is partly made up of accused persons awaiting trial who may be liberated to-day or sent to a penitentiary or reformatory to-morrow.

17.—Population of Penal Institutions, 1933-35.

NOTE.—Penitentiary statistics until 1919 were supplied directly by each penitentiary and were for the calendar year. For 1920 and subsequent years they have been supplied by the Superintendent of Penitentiaries and are for the fiscal years ended Mar. 31. For other institutions, the figures are for the years ended Sept. 30.

Tables 18-20 give the more important penitentiary statistics as reported by the Superintendent. The number of convicts in penitentiaries was 1,865 in 1910, rose to 2,118 in 1916 and declined to 1,468 in 1918. After demobilization and the depression of 1921, the number of convicts rose to 2,640 in 1922, declined to 2,225 in 1924 and then increased to 4,164 in 1932. The increase was particularly rapid after 1929, amounting to 1,395 or 44 p.c. in three years. The number of convicts in 1936, at 3,098, was lower than in any year since 1929. The number of paroles, as shown in Table 18, numbered 431 in 1936, as compared with 554 in 1935, 731 in 1934, and 488 in 1933.

Table 19 shows the ages of convicts by groups. In 1935, of the total of 3,098, 9.0 p.c. were under 21 years of age and 47.5 p.c. between 21 and 30 years of age; thus 56.5 p.c. were under 30. In 1914 there were 2,003 convicts of whom 9.3 p.c. were under 20 and 44.4 p.c. between 20 and 30, a total of 53.7 p.c. under 30. In 1923 there were 2,486 convicts and 11.3 p.c. were under 20, 46.6 p.c. between 20 and 30, or 57.9 p.c. under 30 years of age. The average age of convicts appears to be slightly younger since the War, but no definite trend is shown in the past decade, although there is a good deal of variation from year to year. Detailed statistics of the race, nationality by place of birth, conjugal state, sex, and religion of convicts are presented in Table 20.

¹ All "coloured".² The unusually high figures for many items and the totals in 1933 and 1934 are due to the confinement of Doukhorobors in the special penitentiary on Piers Island, B.C. See p. 1017.³ These persons returned themselves as "Methodists" in spite of the union with Presbyterians and Congregationalists to form the United Church of Canada in 1925.

CHAPTER XXVIII.—MISCELLANEOUS ADMINISTRATION.

Section 1.—Public Lands.

Table 1, below, summarizes the land area of Canada by tenure. Items 3, 4 and 5 are obtained from Dominion Government sources and Items 1, 2, 6 and 7 from Provincial Government sources, so far as possible. Thus, any differences reported from year to year in the area of lands alienated or in process of alienation are compensated for by the adjustment of lands still remaining under the Crown in the right of the provinces concerned. The total land areas shown are the equivalents in thousands of acres of those given by provinces in square miles on p. 7 and p. 54.

1.—Summary of Classification of Lands in Canada, by Tenure (circa) 1936.

NOTE.—The land area of Canada is shown classified by surface resources on p. 54.

Totals, Land Area⁴.....	140,623	152,304	159,232	229,939	936,680	2,218,596⁵

¹ This item includes lands in process of alienation where such are not reported under Item 2. ² Figures are obtained from provincial sources. ³ No estimate available. ⁴ In Yukon and N.W.T. areas aggregating 338,916,000 acres have been set apart by Order in Council as game preserves and sanctuaries in which only native Indians and Eskimos may hunt, but have not been permanently dedicated to this purpose by Parliament and are not, therefore, regarded as parks. ⁵ For the provinces indicated only. ⁶ Including the Wood-Buffero Park (which, though reserved by the Dominion, is not administered as a National Park) and the Tar Sands Reserve. ⁷ That portion of the Wood-Buffero Park in the Northwest Territories. ⁸ Estimated by the Hydrographic and Map Service, Department of Mines and Resources. ⁹ This total is not the addition of the column items because the figures, being obtained from the various sources shown, do not exactly tie-in with one another.

Subsection 1.—Dominion Public Lands.*

As stated on p. 1019 of the 1931 Year Book, the lands and other natural resources lying within the boundaries of the provinces of Manitoba, Saskatchewan, Alberta, and British Columbia, which had formerly been administered by the Dominion Government, were transferred in 1930 to the administration of the provinces concerned.

The public lands remaining under the administration of the Dominion Government now comprise lands in the Northwest Territories, including the Arctic archipelago and the islands in Hudson strait and bay; lands in Yukon Territory; National Parks (see pp. 53-57) and historic sites; Indian reserves (see p. 1031); Ordnance and Admiralty lands; and, in general, all lands held by the several departments of the Dominion Government for various purposes connected with Dominion administration.

The great bulk of the land areas under Dominion administration are those of the Yukon and Northwest Territories, amounting to about 936,680,000 acres or 42 p.c. of the land surface of Canada. In general the southern border of both the Yukon and Northwest Territories is 60° N. latitude. In Europe, Oslo, Stockholm, and Leningrad are near this line, and about three-fourths of Norway, two-thirds of Sweden, all of Finland and a large proportion of Russia are north of it. This northern part of the national domain is under the administration of the Lands, Parks and Forests Branch of the Department of Mines and Resources. The Royal Canadian Mounted Police maintain law and order throughout the Yukon and Northwest Territories. More detailed particulars of the administration of each territory follow:—

The Northwest Territories.—The government of the Northwest Territories is vested in a Commissioner, a Deputy Commissioner, and a Council of five members appointed by the Governor General in Council, with Ottawa as the seat of government. The Territories are subdivided for administrative purposes into the provisional districts of Mackenzie, Keewatin, and Franklin. The District of Mackenzie is the most widely known and developed, trading posts and settlements being located all along the great stretch of inland waterways known as the Mackenzie system.

The administrative headquarters for the Mackenzie District is located at Fort Smith on the Slave river, immediately north of the Alberta provincial boundary. From this point there is uninterrupted navigation to the Arctic ocean, a distance of 1,300 miles, and along the Arctic coast as far east as King William island.

The Administration provides for a medical and nursing service, assists the Anglican and Roman Catholic missions in providing educational and hospital facilities, and cares for the general welfare of the population of the Territories. The population of the Territories at the time of the 1931 Census was 9,723.

Areas, totalling over 514,587 square miles, have been set aside as preserves wherein only the resident Indians, Eskimos and half-breeds may hunt. The Wood-Buffalo Park in the vicinity of Fort Smith, which covers an area of 17,300 square miles (a portion of which is in Alberta), has been reserved specially for the protection of buffalo. The Thelon Game Sanctuary to the east of Great Slave lake, which was set aside primarily to aid in the conservation of musk-oxen, provides sanctuary for all species of game. Under the Northwest Game Act, musk-oxen may not be killed anywhere in the Northwest Territories.

* Prepared under the direction of R. A. Gibson, Director, Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa.

In order to augment the supply of wild life available as a source of food and clothing for the natives, the Dominion Government, in 1935, established a herd of Alaskan reindeer on a reserve of approximately 6,600 square miles, immediately east of the Mackenzie delta. The herd has increased in numbers and is contributing to the well-being of the resident population, certain of whom are being trained in the handling of the deer.

In view of the great increase in the use of aircraft for mail and general transportation, the Administration is undertaking the development of landing facilities throughout the Mackenzie District. A winter landing field has been provided at Fort Smith and others are in course of completion at Providence and Norman. Floating docks, etc., have been constructed at several points for the use of seaplanes.

An excellent air-mail service craft is provided by the Post Office Department, while the Department of National Defence operates a system of radio stations linking up the chief settlements and mining centres of the Northwest Territories and Yukon Territory with Edmonton, Alberta. Radio stations are in operation at Fort Smith, Resolution, Simpson, Norman, Aklavik, Tuktoyaktuk (seasonal), Herschel Island (seasonal), Cameron Bay, Rae, Outpost Island, Dawson, Mayo, Whitehorse, and Burwash Landing. Direction-finding and meteorological stations are operated by the Department of Transport at Chesterfield, Nottingham Island, Resolution Island, and Coppermine.

Exploratory work has been carried on throughout the Territories and much aerial surveying has been done particularly in the mineralized areas of Mackenzie District. Mineral prospectors are exploring new areas, the aeroplane being used as the chief means of transportation. The Precambrian Shield, which has proved so rich in valuable minerals in southerly Canada, is continued into the Territories—that portion lying between Great Slave and Great Bear lakes and Hudson bay—and valuable discoveries have been made in this area. The rich native silver and high-grade pitchblende ores discovered, during the past few years, near Great Bear lake are now under development. The oil wells near Norman on Mackenzie river have been in active operation since 1932, the bulk of the oil produced being used by mining interests operating at the eastern end of Great Bear lake. In recent years much prospecting has been carried out in the Great Slave Lake area where discoveries of gold have been reported: Active development is now in progress at many points. The agricultural land of the Territories lies almost entirely in the extension of the central plain along the Mackenzie valley.

It is known that there are many possible water-power sites throughout the Territories and certain of them may be developed as a consequence of mining enterprises. Much of the Mackenzie valley carries a forest cover, which furnishes timber and fuel for local needs. Fishing, agriculture, and lumbering are engaged in to some extent, but the principal industry of the Territories is still the taking and exportation of furs, with mining rapidly increasing in importance. Many trading posts operate throughout the regions tributary to the Arctic coast, Hudson bay, and the great inland systems of waterways.

Yukon.—Yukon was created a separate Territory in June, 1898. Provision is made for a local Government composed of a chief executive classified as Controller, also an Elective Legislative Council with jurisdiction over local matters and composed of three members with a three-year tenure of office. The Controller administers the Government under instructions from the Governor General in Council or the Minister of Mines and Resources. The seat of government is at Dawson. The Territory has hospitals, schools and other amenities of modern life, including wireless and telegraphic facilities. The population in 1931 was 4,230.

The usual route followed by travellers to Yukon Territory is by steamer from ports on the Pacific coast to Skagway, Alaska, from that point to Whitehorse by the White Pass and Yukon railway, and thence by river boat to Dawson.

The use of aircraft for transportation purposes is increasing and landing fields have been conditioned at Dawson, Mayo, Whitehorse, and Carcross. A temporary licence has been issued for the field at Whitehorse which is becoming important through its being on the main route for international traffic. Some work has been done on emergency fields at Selkirk, Carmacks, and McQuesten.

Yukon has produced over \$200,000,000 worth of gold since the Klondike rush, but the old placer claims, operated with cradle, pick and shovel, have given place to consolidated holdings worked with hydraulic dredges and other modern machinery. The development of the silver-lead ores of the Mayo district has been one of the major factors in the growth of lode-mining enterprises. Copper, tungsten, and coal are also found in Yukon Territory. There is a hydro-electric installation of 13,200 h.p. in Yukon, which is used to supply electric energy for placer mining operations and for the city of Dawson.

Although fishing, agriculture (including fur-farming), and some lumbering are carried on as auxiliary industries, the future of Yukon is inevitably bound up with mining development and the fur trade.

Subsection 2.—Provincial Public Lands.

In the Maritime Provinces, in Quebec, Ontario, and British Columbia (except the Railway Belt and the Peace River Block) the public lands have been administered by the Provincial Governments since Confederation. Owing to the transfer of the natural resources to the Prairie Provinces and British Columbia, as outlined in Chapter XXVII, p. 1019 of the 1931 Year Book, public lands in all provinces are now under provincial administration. In Prince Edward Island, all the land is alienated and there are no provincial public lands.

Those interested in securing information regarding provincial public lands are referred to the following officials of the respective provinces: Minister of Lands and Forests, Halifax, N.S.; Deputy Minister of Lands and Mines, Fredericton, N.B.; Deputy Minister of Lands and Forests, Quebec, Que.; Deputy Minister of Lands and Forests, Toronto, Ont.; Director of Lands, Department of Mines and Natural Resources, Winnipeg, Man.; Director of Lands, Department of Natural Resources, Regina, Sask.; Director of Lands, Department of Lands and Mines, Edmonton, Alta.; Deputy Minister of Lands, Victoria, B.C.

Section 2.—National Defence.*

Before the outbreak of the Great War, the Canadian Militia consisted of a Permanent Force, which on Mar. 31, 1914, numbered 3,000 officers, non-commissioned officers and men, and an Active Militia, which at the same date numbered 5,615 officers and 68,991 non-commissioned officers and men. After the outbreak of war on Aug. 4, 1914, successive contingents of troops of all arms were recruited, equipped, trained and dispatched by the Dominion Government to England for active service. When hostilities ceased on Nov. 11, 1918, there had been sent overseas, for active service in the Canadian Expeditionary Force, about 418,000 officers, non-commissioned officers and men.† In addition to these, several thousand Canadians served with the Royal Air Force.

* Revised by H. W. Brown, Assistant Deputy Minister, Department of National Defence.

† For the detailed expenditures of the Dominion Government on account of war appropriations in the fiscal years 1915-21, see the Canada Year Book, 1921, p. 798.

Organization.—Prior to 1922, three departments of the Canadian Government were concerned with the defence of Canada, *viz.*, the Department of Militia and Defence, the Department of the Naval Service, and the Air Board.

During the session of 1922, the National Defence Act was passed, consolidating the Department of Militia and Defence, the Department of the Naval Service and the Air Board into the Department of National Defence. This Act became effective by proclamation on Jan. 1, 1923. Under it, there is a Minister of National Defence and a Deputy Minister of National Defence. To advise the Minister, a Defence Council has been constituted by Order in Council, consisting of a President (the Minister), a Vice-President (the Deputy Minister), and the following members: the Chief of the General Staff, the Chief of the Naval Staff, and the Senior Air Officer, Royal Canadian Air Force. The Adjutant-General, the Quartermaster-General, the Master-General of the Ordnance, and the Judge Advocate-General, are associate members. There is also a Secretary of the Council.

Subsection 1.—The Naval Service.

The Naval Service of Canada was established by the Naval Service Act, 1910 (9-10 Edw. VII, c. 43), the main provisions of which were described in the 1910 Year Book, pp. xxvi-xxix.

The Royal Canadian Navy and its Reserve Forces are under the direction of the Chief of the Naval Staff, who is a member of the Defence Council. The Service consists of:—

1. Royal Canadian Navy (permanent).
2. Royal Canadian Naval Reserve (non-permanent).
3. Royal Canadian Naval Volunteer Reserve (non-permanent).

Administrative and operational staff for all three Forces is provided from the Royal Canadian Navy.

The Royal Canadian Navy.—The Royal Canadian Navy has an authorized complement of 117 officers and 1,222 ratings. A large majority of the men of the R.C.N. are serving under 7-year engagements. A small proportion consists of specialist gunnery, torpedo, and engine-room ratings, lent from the Royal Navy. (On Dec. 31, 1936, there were 2 Royal Navy officers and 12 Royal Navy ratings on loan to the Royal Canadian Navy.)

A proportion of the officers of the Royal Canadian Navy serves periodically in ships of the Royal Navy, to acquire experience in capital ships, cruisers, etc., and training courses are arranged for selected officers at the instructional schools of the Royal Navy to qualify in war staff, gunnery, torpedo, wireless and other duties. Courses for selected men in the gunnery, torpedo, wireless telegraphy and mechanical training schools of the Royal Navy are similarly arranged.

The ships of the Royal Canadian Navy are:—

- H.M.C.S. *Saguenay* (destroyer—in commission).
- H.M.C.S. *Skeena* (destroyer—in commission).
- H.M.C.S. *St. Laurent* (destroyer—in commission).
- H.M.C.S. *Fraser* (destroyer—in commission).
- H.M.C.S. *Armentières* (minesweeper—in commission).

H.M.C.S. *Champlain* and H.M.C.S. *Vancouver* were paid off on Dec. 1, 1936, and put on the sale list for breaking up in Canada. They were replaced by H.M.C.S. *St. Laurent* and H.M.C.S. *Fraser*, two modern destroyers completed in 1932, which were purchased from the Government of the United Kingdom.

A training schooner under construction has been named H.M.C.S. *Venture* and will be commissioned in the Royal Canadian Navy during the year 1937-38. Four new minesweepers will be laid down during this year.

Naval training establishments comprising: naval barracks; gunnery drill sheds, with all modern appliances for teaching gun-laying, sight-setting, etc.; torpedo and electrical schools; parade grounds, and other equipment are maintained at Halifax and Esquimalt. Naval dockyards, with workshops, etc., for refitting and supplying necessary stores to H.M.C. ships, are also maintained at Halifax and Esquimalt.

Royal Canadian Naval Reserve.—The establishment of the Royal Canadian Naval Reserve is 70 officers and 430 men recruited from among sea-faring personnel. Officers have been appointed to act as registrars at Halifax, Charlottetown, Quebec, Montreal, and Vancouver.

Officers and men of the Royal Canadian Naval Reserve attend naval training at Halifax and Esquimalt for 42 days for the first year of enrolment and for 14 days annually or biennially thereafter. They are permitted to volunteer for service afloat up to a maximum of six months during each period of enrolment. The period of enrolment in the Royal Canadian Naval Reserve is five years.

Royal Canadian Naval Volunteer Reserve.—The establishment of the Royal Canadian Naval Volunteer Reserve is 87 List "A" officers, 20 List "B" officers, 19 instructors, and 1,096 ratings, distributed as follows: Halifax, Saint John, Charlottetown, Quebec, Montreal, Ottawa, Toronto, Hamilton, Winnipeg, Saskatoon, Regina, Edmonton, Calgary, Vancouver, Prince Rupert. An additional Division is in process of establishment.

Each Division is under the immediate command of an officer of the R.C.N.V.R., appointed as commanding officer. The commanding officer is assisted by other commissioned officers of the Force.

A petty officer instructor (a highly qualified ex-petty officer of the Royal Navy or of the Royal Canadian Navy) is employed at each Division to give instruction to men of the Division in gunnery, torpedo practice, seamanship, and other naval subjects.

Each List "A" officer and man of the R.C.N.V.R. performs annually a minimum of 30 drills, of a duration of not less than one hour each, at Division headquarters. In actual practice 40 to 50 drills have been performed annually by each member of the R.C.N.V.R. Officers and men also attend from two to three weeks naval training annually at the naval bases at Halifax or Esquimalt, or at sea in H.M.C. or H.M. ships.

Officers and men who can obtain the necessary leave of absence are permitted to perform a maximum of four months voluntary service during each period of enrolment, and a large number have availed themselves of this opportunity of gaining extended naval experience under sea-going conditions. The period of enrolment and of re-enrolment in the R.C.N.V.R. is three years.

Subsection 2.—Military Forces.

The Militia of Canada is constituted by the Militia Act. The Active Militia is divided into the Permanent and the Non-Permanent Militia.

Permanent Active Militia.—The Permanent Force consists of the following units:—

- Cavalry.—The Royal Canadian Dragoons; Lord Strathcona's Horse (Royal Canadians).
- Artillery.—The Royal Canadian Horse Artillery Brigade ("A", "B" and "C" Batteries); Royal Canadian Artillery (Nos. 1, 2 and 5 Heavy Batteries and No. 3 Medium Battery).
- Engineers.—Royal Canadian Engineers (13 detachments and 1 field company).
- Signals.—The Royal Canadian Corps of Signals.
- Infantry.—The Royal Canadian Regiment; Princess Patricia's Canadian Light Infantry; The Royal 22^d Regiment (a French-Canadian regiment).
- Army Service Corps.—The Royal Canadian Army Service Corps (10 detachments and 2 depots).
- Medical Corps.—The Royal Canadian Army Medical Corps (12 detachments).
- Veterinary Corps.—The Royal Canadian Army Veterinary Corps (8 detachments).
- Ordnance Corps.—The Royal Canadian Ordnance Corps (12 detachments).
- Pay Corps.—The Royal Canadian Army Pay Corps (12 detachments).
- Military Clerks.—The Corps of Military Staff Clerks (12 detachments).

The strength of the Permanent Active Militia is limited by the Amending Act of 1919 to 10,000, but at present the limited establishment is less than 4,200.

Schools of Instruction.—The Canadian Small Arms School is the only school which is an independent unit of the Permanent Force, but at all stations of the Permanent Force in Canada Royal Schools of Instruction are conducted.

Non-Permanent Active Militia.—The Non-Permanent Active Militia consists of:—

CAVALRY.—

- 20 Regiments of Cavalry and Cavalry (Armoured Car).

ARTILLERY.—

- 108 Field Batteries.
- 21 Medium Batteries.
- 10 Heavy Batteries.
- 4 Anti-Aircraft Batteries.
- 1 Anti-Aircraft Machine-Gun Battery.
- 1 Survey Company.

ENGINEERS.—

- 1 Field Squadron.
- 17 Field Companies.
- 6 Field Park Companies.
- 9 Army Troops Companies.
- 1 Electrical and Mechanical Company.
- 1 Workshop and Park Company.
- 2 Anti-Aircraft Companies.
- 2 Corps Field Survey Companies.
- 2 Fortress Companies.

SIGNALS.—

- 7 Cavalry Signal Troops.
- 2 Armoured Car Regiment Signal Troops.
- 4 Divisional Signals.
- 7 District Signals.
- 2 Corps Signals.
- 10 Cable, Wireless, etc., Sections.
- 2 Fortress Signal Companies.

CANADIAN OFFICERS TRAINING CORPS.—

- 22 Contingents.

INFANTRY.—

- 59 Battalions (rifle).
- 26 Battalions (machine-gun).
- 6 Battalions (tank).

ARMY SERVICE CORPS.—

- 1 Cavalry Divisional R.C.A.S.C.
- 6 Divisional R.C.A.S.C.
- 2 Corps Troops R.C.A.S.C.
- 2 Corps Ammunition Parks.
- 2 Pontoon Bridge Parks.
- 1 Reserve Mechanical Transport Company.
- 1 Advance Horse Transport Depot.
- 2 Railroad Supply Detachments.
- 1 Mechanical Transport Vehicle Reception Depot.
- 2 Composite Companies.

MEDICAL CORPS.—

- 2 Cavalry Field Ambulances.
- 22 Field Ambulances.
- 1 Cavalry Field Hygiene Section.
- 11 Field Hygiene Sections.
- 6 Casualty Clearing Stations.

DENTAL CORPS.—

- General List.

VETERINARY CORPS.—

- 1 Veterinary Hospital.
- 2 Cavalry Mobile Veterinary Sections.
- 7 Mobile Veterinary Sections.
- 1 Veterinary Evacuating Station.

ORDNANCE CORPS.—

- 6 Army Field Workshops.
- 1 Ordnance Workshop Company.
- 1 Ordnance Store Company.
- 1 Anti-Aircraft Group Workshop.
- 1 Ordnance Ammunition Company.
- 1 Cavalry Divisional Ordnance Workshop.
- 11 District Store Sections.

POSTAL CORPS.—

- 1 Base Post Office.
- 11 Postal Units.

The total establishment of the Non-Permanent Militia is 8,670 officers and 117,920 other ranks, a total of 126,590, distributed as shown in the following table:—

2.—Permanent and Non-Permanent Active Militia in Canada, 1936.

Arm of Service.	Permanent Active Militia.		Non-Permanent Active Militia.	
	Personnel.	Horses.	Personnel.	Horses.
Staff and General List.....	62	—	—	—
Cavalry.....	438	316	8,852	5,390
Field Batteries of Artillery.....	407	17	9,797	—
Medium Batteries of Artillery.....	56	—	2,309	—
Heavy Batteries of Artillery and Anti-Aircraft.....	257	2	1,651	—

Officers' Training Corps.....	—	—	4,551	—
Infantry.....	1,004	31	55,633	57
Army Service Corps.....	284	—	1,393	4
Non-Combatants.....	906	—	5,687	50
Totals.....	4,158	366	99,585	6,721

Reserve Militia.—In addition to the Active Militia, there is also the Reserve Militia—a framework designed to serve as a basis for contingent military organization. Drill and training are voluntary and entail no expense to the public.

The reserves of the Active Militia, as distinguished from the Reserve Militia mentioned above, comprise:—

- (a) The Reserve of Officers (general list).
- (b) Reserve Regimental Depots.
- (c) Corps Reserves and Corps Reserve Lists of the Non-Permanent Active Militia consisting of qualified officers who are permitted to withdraw from the training establishment of Corps of the Non-Permanent Active Militia.
- (d) Certain Reserve units of the R.C.A.M.C. (N.P.)—"General Hospitals" and "Motor Ambulance Convoys".

Military Districts.—For the command, training and administration of the Canadian Militia, Canada is divided into 11 military districts, each under a District Officer Commanding, assisted by a district staff.

Militia Appropriations.—The Militia appropriations for the six fiscal years ended Mar. 31, 1933-38, are shown in Table 3.

3.—Money Voted by Parliament for the Militia, fiscal years ended Mar. 31, 1933-38.

Subsection 3.—Air Service.

The Royal Canadian Air Force is composed of the Permanent Active Air Force, the Non-Permanent Active Air Force, and a Reserve of Officers. The Royal Canadian Air Force administers and controls all military air operations and certain air operations for civil government departments. The duties of the Royal Canadian Air Force are as follows:—

- (a) To organize, train and maintain an air force for the defence of Canada.
- (b) To assist in the development of civil aviation by providing advanced flying training to civilian pilots, instructors and commercial pilots.
- (c) The conduct of flying required to assist certain departments of the Dominion Government in the development and conservation of the country's natural resources, and other related services.

Permanent Active Air Force stations and units are located as follows:—

Location.	Duty.
R.C.A.F. Headquarters, Ottawa, Ont.	
No. 1 Aircraft Depot, R.C.A.F., Ottawa, Ont.	Stores and repair.
No. 2 Supply Depot, R.C.A.F., Winnipeg, Man.	Stores.
R.C.A.F. Station Headquarters, Ottawa, Ont.— R.C.A.F. Photographic Establishment.....	Test and experimental work and civil government air operations.
No. 7 (General Purpose) Squadron.....	
No. 8 (General Purpose) Squadron.....	
R.C.A.F. Training Group, Camp Borden, Ont.— R.C.A.F. Station Headquarters.....	Training.
No. 2 Technical Training School.....	
Flying Training School.....	
Air Armament School.....	
R.C.A.F. Station Headquarters, Trenton, Ont.— No. 1 Technical Training School.....	Training.
School of Army Co-operation.....	
Air Navigation and Seaplane School.....	
Wireless School.....	
Stores School.....	
<i>Administered by Station Hdqrs., Trenton, Ont.—</i> No. 1 (Fighter) Squadron.....	Service duties according to type of squadron.
No. 2 (Army Co-operation) Squadron.....	
No. 3 (Bomber) Squadron.....	
No. 6 (Torpedo Bomber) Squadron.....	
No. 4 (Flying Boat) Squadron, Vancouver, B.C.....	
No. 5 (Coastal Reconnaissance) Squadron, Dartmouth, N. S.	

Non-Permanent Active Air Force units are located as follows:—

No. 10 (City of Toronto) (Army Co-Operation) Squadron, Toronto, Ont.
No. 11 (Army Co-operation) Squadron, Vancouver, B.C.
No. 12 (Army Co-operation) Squadron, Winnipeg, Man.
No. 13 (Army Co-operation) Squadron, Calgary, Alta. (now in process of organization).
No. 15 (Fighter) Squadron, Montreal, Que.
No. 18 (Bomber) Squadron, Montreal, Que.
No. 19 (Bomber) Squadron, Hamilton, Ont.
No. 20 (Bomber) Squadron, Regina, Sask.
No. 21 (Bomber) Squadron, Quebec, Que. (now in the process of organization).

The strength of the Royal Canadian Air Force on Dec. 31, 1936, was:—

	Officers.	Airmen.
Permanent Active Air Force.....	152	962
Non-Permanent Active Air Force.....	72	405

Subsection 4.—The Royal Military College.

The Royal Military College of Canada was founded in 1876 by the Honourable Alexander Mackenzie, then Prime Minister of Canada. Since its foundation, 2,555 gentleman cadets have been enrolled, and of this number 196 are now in attendance.

The maximum number of cadets who may be in residence at any one time is restricted by Order in Council to two hundred.

The Royal Military College has a very distinguished record in connection with the War. Of the 914 graduates and ex-cadets who served, 353 were granted commissions direct from the College, and 43 enlisted with a view to obtaining commissions; 156 ex-cadets were reported as killed in action, died of wounds, or missing. Ex-cadets of the College won the following honours and decorations: 1 Victoria

Cross and 3 recommendations for the Victoria Cross, 106 Distinguished Service Orders, 109 Military Crosses, 2 Distinguished Flying Crosses, 62 other British decorations, 42 foreign decorations. Three Canadian and one Australian Divisions were commanded by graduates of the College.

Ex-cadets who have served in the army, either in the regular forces or during the Great War, include 1 general, 5 lieutenant-generals, 17 major-generals, and 29 brigadier-generals or brigadiers. Eleven knighthoods have been conferred on ex-cadets for distinguished service.

The establishment of the College, as stated in the Act of 1874 (37 Vict., c. 36) was "for the purpose of imparting a complete education in all branches of military tactics, fortifications, engineering and general scientific knowledge in the subjects connected with and necessary to a thorough knowledge of the military profession, and for qualifying officers for command and staff appointments". In addition to the foregoing, the course of instruction is such as to afford a thorough practical and scientific training in civil engineering, surveying, physics and chemistry, English and French. The strict discipline maintained at the College is a valuable feature, and the constant practice of gymnastics, riding, drills, and outdoor exercises of all kinds promotes the health and good physical condition of the cadets.

The College is situated one mile from Kingston on the St. Lawrence river where it emerges from lake Ontario. The buildings of the College proper occupy a beautiful peninsula of 60 acres, lying between the mouth of the Cataraqui river and Navy bay. Additional adjacent grounds, on which stands the historic Fort Henry, make up a total of about 500 acres which are at the disposal of the College for use as a training area. On the point of the peninsula is situated Fort Frederick, built in 1837 when Kingston became the capital of Canada, the fort forming part of the defences of Kingston at that time. The College is under the supervision of the Department of National Defence, and is inspected annually by an advisory board composed of leading Canadian citizens, both civil and military, which makes its reports and recommendations to the Minister of National Defence. The College is commanded by a commandant, who is assisted by a staff-adjutant and a competent staff of civil and military professors and instructors.

A four-year course leads to a "diploma with honours", a "diploma" or a "certificate of military qualification". A number of commissions in the Canadian Permanent Force and the Royal Canadian Air Force, as well as commissions in the British Regular Forces, the Indian Army, and the Royal Air Force, are offered annually to graduates; and for cadets who desire to obtain commissions in the Royal Canadian Navy a limited number of naval cadetships are available each year to cadets who successfully complete the first two years of study, and who are not over 20 years of age on the first of September of the year in which they desire to enter the Navy. To those graduates joining the British Army, the privilege of one year of seniority is granted in the British or Indian Armies. This has been arranged in order to equalize the seniority of graduates of the Royal Military College of Canada with those of the Royal Military Academy, Woolwich, or the Royal Military College, Sandhurst, since the courses at the latter institutions are shorter than the Canadian.

The principal Canadian universities admit recommended graduates to the fourth year of their civil engineering courses and to the third year of other engineering courses; and some of the universities admit graduates to the third years of arts and science courses.

The R.M.C. diploma is accepted by the Law Societies and Bar Associations of Nova Scotia, Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia as the equivalent of a B.A. degree for admission to the study of law. The Dominion Association of Chartered Accountants likewise accepts R.M.C. graduates as registered students under the same conditions as university graduates.

Entrance to the College is on a competitive basis. Candidates are required to pass a rigid medical examination, and to have obtained junior matriculation or an acceptable equivalent. Applications for admission to the College should reach The Secretary, Department of National Defence, Ottawa, before May 31 of each year.

Section 3.—Department of Public Works.*

Since Confederation and before, the constructing department of the Dominion Government has been known as the Department of Public Works. In 1879 the railways and canals were placed under the control of a new department, the building and maintenance of penitentiaries were transferred to the Department of Justice, the maintenance and construction of lighthouses to the Marine and Fisheries Department, and the smaller drill halls and armouries to the Department of National Defence. The work of the Department of Public Works is now divided into three principal branches, *viz.*, the Engineering Branch, the Architect's Branch and the Telegraph Branch.

Engineering.—The Engineering Branch conducts the construction and repair of wharves, piers, breakwaters, dams, weirs, bank and beach protection works; the improvement of harbours and rivers by dredging; the construction, operation and maintenance of dredging plant and the construction, operation and maintenance of graving or dry docks. The construction and maintenance of interprovincial bridges and approaches thereto, also the construction, operation and maintenance of bridges with movable spans on certain highways; hydrographical and topographical surveys which are required for the preparation of plans, reports and estimates; test borings for the purpose of ascertaining the nature of foundations; the testing of cements and materials of construction; the licensing of international and interprovincial ferries, and the control of works constructed in or over navigable waters by authority of the Navigable Waters Protection Act (R.S.C., 1927, c. 140).

Architecture.—The Architect's Branch constructs and maintains Government buildings, post offices, customs houses, examining warehouses, quarantine stations, immigration and experimental farm buildings, military hospitals and telegraph offices. It also constructs armouries and drill halls and leases office accommodation as required for the various Departments.

Telegraphs.—The Telegraph Branch has control of the construction, operation and maintenance of all Government-owned telegraph lines and cables. These lines are located in the provinces of Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan, Alberta, British Columbia, and Yukon (see also p. 712).

Graving Docks.—The Department constructed five dry docks and is responsible for subsidies under the Dry Dock Subsidies Act, 1910 (9-10 Edw. VII, c. 17). A description of these docks is given in the Transportation Chapter, p. 881.

Expenditure and Revenue.—Table 4 shows the expenditures and revenues of the Public Works Department of the Dominion Government, for the fiscal years 1931-36.

* Revised by J. M. Somerville, Secretary, Department of Public Works.

Section 4.—The Indians and Eskimos of Canada.

Subsection 1.—The Indians of Canada.*

The Indians of Canada whose affairs are administered by the Department of Mines and Resources, Indian Affairs Branch, number about 112,510 (according to a departmental census taken in 1934), their numbers varying slightly from year to year. A small yearly increase is evident, and the popular notion that the race is disappearing is not in accordance with facts. Before they were subjected to the degenerating effects of European civilization and the devastating results of the many colonial wars, the numbers of the Indians were undoubtedly larger, but any reliable information as to the aboriginal population during either the French or the early British régime is non-existent, and there is no adequate basis for a comparison between the past and present aboriginal populations. An interesting sketch of the progress of the Indians of Canada since Confederation will be found in the Report of the Department of Indian Affairs, 1927.

Administration.†—Reserves have been set aside for the various bands of Indians throughout the Dominion, and the Indians located thereon are under the supervision of the local agents of the Department. The activities of the Department as guardian of the Indians, include the control of Indian education and health, the development of agriculture and other pursuits among them, the administration of their lands, community funds, estates, and the general supervision of their welfare.

* Revised by T. R. L. MacInnes, Secretary, Indian Affairs Branch, Department of Mines and Resources.

† For an outline of the early administration, see p. 937 of the 1932 Year Book.

The local administration of the Indian bands on the reserves scattered throughout the Dominion is conducted through the Department's agencies, of which there are in all 116. The number of bands included in an agency varies from one to more than 30. The staff of an agency usually includes various officers in addition to the agent, such as medical officer, clerk, farm instructor, field matron, constable, stockman, etc., according to the special requirements of the agency in question. The work of the agencies is supervised by the Department's inspectors, each inspector having charge of a certain number of agencies. Expenditures upon destitute Indians are made by the Dominion Government, either from public funds or from tribal funds of the Indians themselves.

The Indian Act provides for the enfranchisement of Indians. When an Indian is enfranchised he ceases to be an Indian under the law and acquires the full status of citizenship. In the older provinces, where the Indians have been longer in contact with civilization, many are becoming enfranchised. Great discretion, however, is exercised by the Government in dealing with this problem, as Indians who become enfranchised lose the special protection attached to their wardship, so that it is necessary to guard against premature enfranchisement.

Treaties.—In the older eastern provinces, the history of the Indians has been one of slow development with that of the community. In western Ontario, the Prairie Provinces, and the Territories the situation has been different. There, the rapid spread of civilization made it necessary to take prompt and effective measures to protect the moral claims of the Indians, which are recognized by the Government. Accordingly, treaties were entered into with the Indians, whereby the latter ceded to the Crown their aboriginal title and interest in the country. In consideration of such cession the Crown agreed to set aside adequate reserves, make cash grants, provide per capita annuities, give assistance in agriculture, stock-raising, hunting, trapping, etc., as particular circumstances might require, provide education for the Indian children, and otherwise safeguard the Indians' interests. These treaties have been made from time to time as occasion arose and as new territories were opened up. No treaty has been made with the Indians of British Columbia, except in the Peace River Block, but their welfare has received no less attention from the Government on that account.

Government Expenditure.—On Mar. 31, 1936, the capital of the Indian Trust Fund, which a year earlier had amounted to \$13,810,673, had increased to \$13,877,863. The amounts expended from the Consolidated Revenue Fund were as follows: voted by Parliament for the purposes of the Department, \$4,628,503, Public Works Construction, \$292,900; and annuities by statute, \$240,105.

Statistics.—Statistical tables of population, school attendance, income and agricultural activities of the Indians in Canada follow. In Table 5 the populations for 1871-1931 are compiled from reports of the various censuses since Confederation, while the statistics and other information in the remaining tables are taken from the last Annual Report of the late Department of Indian Affairs. The Department takes a quinquennial census of Indians under its control, whereas census figures include all persons of Indian origin. The quinquennial census taken by the Department in 1934 showed a total of 112,510 as compared with 108,012 in 1929 and 104,894 in 1924, an increase of 7.3 p.c. in ten years. The details of the Census of 1934 are given in the Annual Report of the Department for that year. The figures of the decennial census include some thousands of persons of Indian race who are living off the reserves as ordinary citizens of Canada.

5.—Indian Population of Canada at the Decennial Censuses of 1871-1931.

¹ Census figures in the organized provinces and estimates for the rest of Canada.² Racial origin

not taken in 1891; the figures have been taken from the report of the Department of Indian Affairs of that year.

³ Includes 34,481 "half-breeds".⁴ The smaller Indian population of the Northwest Territories in 1921 is to be ascribed to the extension of the boundaries of Quebec, Ontario, and Manitoba in 1912. This also accounts for the increase in the 1921 Indian population of these provinces.

Indian Education.—The educational work of the Department is now very extensive. In the fiscal year ended Mar. 31, 1936, a total of 359 Indian schools were in operation, including 79 residential schools for Indians with an enrolment of 8,906, and 272 day schools for Indians with an enrolment of 8,907 Indian pupils, also 10 combined public and Indian schools, with 213 Indian pupils enrolled. The total enrolment in the Indian schools has increased from 12,799 in 1915-16 to 18,033 in 1935-36 and the average attendance from 8,080 to 13,849 or from 63·1 p.c. to 76·8 p.c. of the enrolment. Continuation and high school work is now being taught in several of the day and residential schools. The amount spent on Indian education in the fiscal year ended Mar. 31, 1936, was \$1,936,744.

¹ Includes income received from timber and mining dues and from annuities earned as interest on Indian trust funds.

Subsection 2.—The Eskimos of Canada.*

The Eskimos of Canada are found principally on the northern and Hudson Bay coasts of the mainland and on islands in the Arctic archipelago and in Hudson bay, although in the Baker Lake-Chesterfield Inlet area on the west side of Hudson bay there are bands of Eskimos who are essentially an inland people, and who subsist chiefly on caribou. The diet of the coast Eskimos is largely marine mammals and fish, varied at times by caribou obtained from the interior during the seasonal migrations of these animals. The skins of the caribou are used for winter clothing.

The wandering life of the Eskimos and the vast area over which they are scattered present great difficulties in ascertaining their exact numbers. The total for the entire Dominion, according to the latest returns, is about 6,000, located mainly in the Northwest Territories, with approximately 1,590 in Quebec, 85 in Yukon Territory, 62 in Manitoba, and 3 in Alberta.

The administrative care of Eskimos outside of the organized provinces devolves upon the Department of Mines and Resources which, by regulative measures (including the setting aside of game preserves where only natives may hunt and the establishment of a reindeer herd), conserves the natural resources necessary to

* Prepared under the direction of R. A. Gibson, Director, Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa.

their subsistence. Contact with the Eskimos is maintained through permanent stations in the Eastern, Central, and Western Arctic, (at a number of which medical officers are located), by patrols of the Royal Canadian Mounted Police, and by means of the annual Canadian Eastern Arctic Patrol by steamship.

Section 5.—Pensions and other Provision for War Veterans.*

Pensions Section.—This Section is responsible for the administration of returned soldiers' affairs under the Department of Pensions and National Health Act and the War Veterans' Allowance Act. It is also responsible, by direction of the Canadian Pension Commission, for certain administrative duties under the Pension Act and the Returned Soldiers' Insurance Act. The Representative of the Treasury is responsible for all payments under these Acts.

The Annual Report for the fiscal year ended Mar. 31, 1936, shows an increase over the previous year in the number of ex-members of the Forces who received in-patient hospital treatment, the number being 12,835 as against 12,560 in 1934-35, 11,718 in 1933-34 and 13,342 in 1932-33. The Department maintains eight hospitals, situated in the following centres: Halifax, Saint John, Ste. Anne de Bellevue, Toronto, London, Winnipeg, Calgary, and Vancouver. A sheltered employment workshop is operated at Montreal and one shop by the Red Cross Society at Victoria.

One of the features of the activities of the Department is provision in a departmental institution for pensioners who through age or infirmity are unable to care for themselves. The number of such cases showed an increase during the year, the total on Mar. 31, 1936, being 286 as against 235 a year previously, 250 on Mar. 31, 1934, 213 on Mar. 31, 1933, and 198 on Mar. 31, 1932. The issue of orthopædic and surgical appliances has been maintained with a slight decrease. The number of pensioners who have been granted relief was 12,083 in 1935-36 as compared with 11,541 in 1934-35, 12,735 in 1933-34, 14,368 in 1932-33, 12,303 in 1931-32 and 8,811 in 1930-31. The expenditure on relief in 1935-36 was \$2,365,579; in 1934-35, \$2,042,355; in 1933-34, \$1,912,563; in 1932-33, \$1,978,284; 1931-32, \$2,082,052; and 1930-31, \$907,010.

The provision under which the Department assumes responsibility in respect of accidents sustained by pensioners of 25 p.c. and upwards when engaged in industry has been continued. During the fiscal year under review, the number of claims was 279; in 1934-35, 222; in 1933-34, 180; in 1932-33, 179, and in 1931-32, 200. The expenditure was as follows: 1935-36, \$27,138; 1934-35, \$23,103; 1933-34, \$36,420; 1932-33, \$17,641; 1931-32, \$49,878. The expenditure is largely governed by the number of fatal and serious accidents.

The following is a summary statement of the manner in which the funds appropriated by Parliament have been dealt with, and also sets forth the costs of administration and the adjudication of pensions.

The Canadian Pension Commission.—By c. 45 of the Statutes of 1933, the Board of Pension Commissioners for Canada and the Pension Tribunal ceased to exist; their duties were taken over by the Canadian Pension Commission, which was formed by the Act referred to, and the personnel of the Commission was increased from three to not less than eight nor more than twelve. Twelve members have been appointed.

The Commission is responsible for the adjudication and awarding of pensions in respect of disabilities connected with military service and the awarding of pensions to the dependants of those who die. It operates under the authority of the Pension Act. The following table shows the number of pensions in force at the end of the fiscal years 1918 to 1936, together with the annual liability. The large increase in disability pensioners from 1930 to 1933, inclusive, was primarily due to the reinstatement on pension of those who had commuted their pensions from 1920 onwards. This restoration was under the authority of an amendment to the Pension Act in 1930.

11.—Pensions in Force as at Mar. 31, 1918-36.

Veterans' Bureau.—Pursuant to legislation passed in 1930, a Veterans' Bureau was organized as a branch of the Department and came into active operation on Oct. 1, 1930. The duties of the Bureau were set forth on p. 945 of the Canada Year Book, 1932. Briefly stated, the Bureau was created and is operated to assist applicants for pension in the preparation and presentation of their cases. There is a Chief Pensions Advocate with his staff at Ottawa, and Pensions Advocates have their offices in all the principal cities of Canada.

War Veterans' Allowances.—A synopsis of the War Veterans' Allowance Act, which came into force on Sept. 1, 1930, appeared on p. 946 of the Canada Year Book, 1932. The following statistics show the activities of the War Veterans' Allowance Board for the fiscal years ended Mar. 31, 1935 and 1936.

Section 6.—Soldier Settlement of Canada.†

At the end of the calendar year 1936 the Soldier Settlement of Canada had 20,531 farm properties under administration, representing a net investment of \$51,494,590. Under the Soldier Settlement Act of 1919, 25,014 soldier settlers were established on the land with loans. On Dec. 31, 1936, there were 10,321 soldier settlers, 5,781 civilian settlers and 1,917 settlers under the British Family Scheme. There were 2,512 farms on hand of which 1,750 are leased; 3,278 soldier settlers had repaid their loans in full in cash; 1,977 properties had been transferred to municipalities and provinces under Section 21 (a) of the Soldier Settlement Act.

Under the 3,000 British Family Scheme 3,346 families came forward for settlement. Of these 1,630 had withdrawn as at Dec. 31, 1936, 17 had repaid their loans, leaving 1,699 families who are still operating their farms. Under the New Brunswick Family Settlement Agreement, 359 families came forward; of these 141 had withdrawn and 218 remained on the land.

* Revised by D. S. Drew, Officer in Charge of Returned Soldiers' Insurance.

† Revised by F. C. Blair, Director, Soldier Settlement of Canada.

The following numbers of settlers had applied for the benefits of the Farmers' Creditors Arrangement Act; 505 soldier settlers, 377 civilian settlers, 189 British Family settlers. Of this number 271 cases of soldier settlers had been disposed of, involving indebtedness of \$899,615 and a reduction of \$201,293; civilians, 216 cases disposed of, debt \$789,378, reduction \$224,153; Empire settlers, 90 cases disposed of, indebtedness \$395,745, reduction \$133,318.

The supervision staff of the Department have made land appraisals and reported on the application of settlers (other than those under the Soldier Settlement of Canada) under the Farmers' Creditors Arrangement Act. To Dec. 31, 1936, 5,193 land appraisals and reports had been made in British Columbia, Alberta, Saskatchewan, Manitoba, and Ontario.

Other investigational services in the calendar year 1936 were: 1,575 investigations for the Department of Mines and Resources (Immigration Branch) in connection with the proposed admission of immigrants to Canada; 4,072 investigations in rural districts with respect to applications under the War Veterans' Allowance Act of 1930; 3,527 investigations for the Department of Pensions and National Health and the Canadian Pension Commission with respect to applications for relief allowances and special investigations of pension cases in rural districts; 327 land appraisals for the Canadian Farm Loan Board.

Section 7.—Department of the Secretary of State.*

The Department of the Secretary of State was constituted in its present form in 1873, through the merging of the previously-existing offices of the Secretaries of State for Canada and for the provinces. The Secretary of State is the official mouthpiece of the Government as well as the medium of communication between the Dominion and Provincial Governments, all correspondence between the Governments being conducted by him with the Lieutenant-Governors. He is also the custodian of the Great Seal of Canada and the Privy Seal as well as the channel by which the general public may approach the Crown.

The Secretary of State is also the Registrar General, registering all proclamations, commissions, licences, warrants, writs, and other instruments issued under the Great Seal and the Privy Seal. He is further charged with the administration of the Boards of Trade Act, the Companies Act, the Canada Temperance Act, the Copyright Act, the Naturalization Act, the Patent Act, the Trade Unions Act, the Ticket of Leave Act, the Unfair Competition Act, and with the collection and tabling of parliamentary returns. Statistics regarding patents and copyrights appear under Chapter XVII at pp. 606-608. The following information on other subjects has been secured in the course of administration.

Charters of Incorporation.—The number of companies incorporated under the Companies Act and amending Acts during the fiscal year ended Mar. 31, 1936, was 371 with a total capitalization of \$141,237,550. Supplementary letters patent were granted during the year to 237 companies, 41 of which increased their capital stock by the aggregate amount of \$54,073,000; 76 decreased their capital stock by \$79,640,610; the remaining 120 were granted supplementary letters patent for various purposes, such as changing names, extending powers, etc. The total capitalization of new companies plus the increase of capital of existing companies amounted to \$195,310,550, partly offset by the above-mentioned decreases in capitalization totalling \$79,640,610.

* Revised by E. H. Coleman, K.C., Under-Secretary of State, Department of the Secretary of State.

In Table 12 will be found the number and capitalization of companies incorporated during the years 1900-36.

¹ Includes consideration of the amounts of capital received on the issue of shares without nominal or par value.

Naturalizations.—The naturalizations effected under the Naturalization Act (R.S.C., 1906, c. 77) for the calendar years 1908-17, inclusive, were given on p. 594 of the Year Book for 1919. Since Jan. 1, 1918, the only method of obtaining naturalization has been under what is known as the "Imperial" Naturalization Act, which came into force on Jan. 1, 1915. This Act was known under the title of the Naturalization Act, 1914, until July 7, 1919, when it was repealed and the Naturalization Act, 1919, came into force. On July 1, 1920, the Naturalization Act, 1919, was repealed, and the Naturalization Act, 1914, was revived and amended under the title of the Naturalization Acts, 1914 and 1920. By an amendment passed by Parliament in 1923, the restriction by which persons of alien enemy birth were

ineligible to receive certificates of naturalization for a period of 10 years after the termination of the War was removed, and at the present time any alien may apply for naturalization, regardless of his nationality. All these Acts have been consolidated in R.S.C., 1927, c. 138. Since Jan. 15, 1932, women British subjects, marrying aliens, retain their British nationality, unless they, by marriage, acquire their husbands' nationalities, and the wives of aliens no longer become British subjects through their husbands' naturalization. They must apply to the Secretary of State.

Table 13 shows the number of naturalization certificates issued to single persons or heads of families under these Acts during the calendar years from 1926 to 1935. The total numbers of persons naturalized during the fiscal years ended Mar. 31, 1935 and 1936, were 20,903 and 30,679, respectively, including (except as stated above) the wives and minor children of those to whom naturalization certificates were issued.

Canada Temperance Act.—Under Parts I and II of this Act, provision is made for the prohibition of the sale of intoxicating liquors in counties and cities. The last vote taken under these parts was in the County of Compton, Quebec, on April 28, 1930, in response to a petition for the repeal of the Act in that county. The vote resulted in favour of the repeal, which became effective on June 14, 1930. Part III of the Act relates to penalties and prosecutions, Part IV to the prohibition of the importation and exportation of intoxicating liquors into and from the provinces, while Part V enacts provisions in aid of provincial legislation for the control of the liquor traffic.

Section 8.—Royal Canadian Mounted Police.*

The Royal Canadian Mounted Police is a constabulary maintained by the Dominion Government. It was organized in 1873, and was known as the North West Mounted Police, whose duties were confined to what was then known as the Northwest Territories. In 1904 its name was changed to Royal North West Mounted Police.

In 1905, when Alberta and Saskatchewan were constituted provinces, an arrangement was made whereby the Force continued to discharge its former functions, each province making a contribution towards defraying the cost. This was continued until 1917. Soon after the close of the Great War an extension of governmental activities made it obvious that the enforcement of Dominion Statutes was assuming increasing proportions, and that it would soon be necessary to have a police force responsible therefor. In 1918, to the Royal North West Mounted Police was assigned the duty of the enforcement of Dominion legislation for the whole of Western Canada, west of Port Arthur and Fort William and in 1920 for the whole of Canada.

In 1920, the name of the Force was changed to the Royal Canadian Mounted Police, and the former Dominion Police with headquarters at Ottawa, whose duties were largely connected with guarding public buildings in that city and the Canadian Government dockyards at Halifax, N.S., and Esquimalt, B.C., were absorbed by the Royal Canadian Mounted Police.

At the present time, the R.C.M. Police is responsible throughout Canada for the enforcement of the laws against smuggling by land, sea and air. It enforces the provisions of the Excise Act, is responsible for the suppression of the traffic in narcotic drugs, enforcement of the Migratory Birds Convention Act, and assists the Mines and Resources, Fisheries, and numerous other Dominion Departments in executing the provisions of their respective Acts, and in some cases in administrative duties. It is responsible for the protection of government buildings and dockyards. It is the sole police force operating in the Yukon Territory and the Northwest Territories, and performs a variety of services in all provinces and both Territories for the Dominion Government.

Under the R.C.M. Police Act any province may enter into an agreement with the Dominion Government for the services of the Royal Canadian Mounted Police, to enforce provincial laws and the Criminal Code, upon payment for its services, and at the present time such agreements are in force with the provinces of Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, and Alberta.

The Force is controlled and administered by a Minister of the Crown (at present the Minister of Justice), and it may be employed anywhere in Canada. From a force of 300 in 1873, it had a strength on Dec. 31, 1936, of 2,584. Its means of

* Revised by Major-General Sir James H. MacBrien, K.C.B., C.M.G., D.S.O., Commissioner, Royal Canadian Mounted Police.

transport at that time consisted of 218 horses, 458 motor vehicles and 357 sleigh dogs. The Force is organized into 14 divisions of varying strength, distributed over the entire country. The term of engagement is five years for recruits, with re-enlistment for a period not exceeding five years. The officers are commissioned by the Crown. Recruits are trained at Regina, Saskatchewan. The course of training is six months, and consists of drill, both mounted and on foot, physical training, including instruction in wrestling, boxing and ju-jitsu. Special attention is paid to police duties, both Dominion and provincial, and detailed lectures are given in these, including court procedure. Instructional courses for promotion are held and, where practicable, an annual refresher course of training is given.

The Marine Section of the Force on Dec. 31, 1936, had a strength of 223 officers and men, distributed among 19 cruisers and patrol boats on the Atlantic and Pacific coasts and inland waters.

ewan.

Section 9.—The Civil Service of Canada.

Organization.*—Prior to 1882, appointments to the Civil Service were made directly by the Government. In that year, a Board of Civil Service Examiners was appointed to examine candidates and issue certificates of qualification to those successful at examinations. Appointments, however, were still made by the Government of the day.

The Royal Commission of 1907, appointed to inquire into the Civil Service Act and its operation, reported in favour of the creation of a Civil Service Commission. In 1908 this body was established; it consisted of two members appointed by the Governor in Council and holding office during good behaviour, but removable by the Governor General on address of the Senate and House of Commons. The Civil Service was classified into three divisions under the Deputy Heads of Departments, each division consisting of two subdivisions, each of these having its scale of salaries. The Commission was charged with the organization of and appointments to the Inside Service (at Ottawa), certain appointments to be made after open competition and others after qualifying tests, also with holding qualifying examinations for the Outside Service (the Service apart from Ottawa) to obtain lists from which selections could be made by the various Departments. All British subjects between 18 and 35 years of age who had resided in Canada for three years were eligible to try these examinations.

In 1918 a third member of the Civil Service Commission was appointed, and by the Civil Service Act of that year the principle of appointment after open competition was applied to the Outside as well as the Inside Service. The Act also provided for the organization by the Commission of the various Government Departments, for a classification of all positions in the Service on a duties basis, for the establishment of new rates of compensation, and for the principle of promotion by merit wherever consistent with the best interests of the Service. Provision was also made for preference, in the matter of appointment to the Service, to be given to qualified applicants who had served in the Great War.

Civil Service Statistics.†—From April, 1924, a monthly return of personnel and salaries has been made by each Department to the Dominion Bureau of Statistics, according to a plan that ensures comparability between Departments and continuity in point of time. The institution of this system was preceded by an investigation back to 1912, the summary results of which are presented in Table 15.

During the war years, as will be seen from Table 15, the number of employees increased very rapidly, as a result of the enlargement of the functions of government and the imposition of new taxes, necessitating additional officials as collectors. Such new services as the Department of Pensions and National Health and the Soldier Settlement Board were also created. The maximum was reached in January, 1920, when 47,133 persons were employed; this number has since decreased to 40,813 in January, 1936. It may be added that, out of 41,132 in March, 1936, (see Table 16), 1,188 in the Income Tax Branch and 2,290 in the Department of Pensions and National Health, or 3,478 in all, were engaged in services of outstanding

* Revised by Wm. Foran, Secretary, Civil Service Commission, Ottawa.

† Revised by Col. J. R. Munro, Chief of the Finance Branch of the Dominion Bureau of Statistics, Ottawa.

importance which had no existence before the War. Further, an additional 10,847 persons were, in March, 1936, employed in the Post Office Department, performing services of an industrial rather than of a governmental type, and receiving their salaries out of payments made by the public for services immediately rendered, rather than out of taxation.

The statistics of numbers of employees and of salaries, now being secured monthly, are more comprehensive than those previously published, as a result of the inclusion of various classes of employees, largely "part-time", "seasonal" and "fees of office" employees, who were not included in the report published in 1925. These employees are largely in the Departments of Marine, Fisheries and Public Works. There remain, however, many persons in the "non-enumerated classes" whose numbers cannot be supplied monthly by the departmental officials but whose compensation is included in the monthly figures of expenditure on personnel, as shown in Table 16.

¹ Figures for January, 1925-36 are not comparable with those for preceding Januaries, because monthly records now being published include various classes of employees not included in the historical record for the 13 years 1912-24.

Table 16, which gives statistics by Departments, with a further classification by principal branches where such are recorded, is included to give comparable figures for the latest months. In the month of March, 1936, the total number of employees in the enumerated classes was 41,132 as compared with 40,702 in March, 1935. The total expenditure on wages and salaries for all classes of employees for March, 1936, was \$8,745,072 as compared with \$8,475,408 for March, 1935.

16.—Total Numbers of Civil Service Employees, by Departments and Principal Branches ("Non-Enumerated Classes" Excluded), and Total Expenditures on Salaries and Wages of all Employees ("Non-Enumerated Classes" Included), March, 1935, and March, 1936.

Section 10.—Supervision of Race Track Betting.

By an amendment to Section 235 of the Criminal Code, passed in 1920, the supervision of race track betting, under the pari-mutuel system, was placed in the hands of the Minister of Agriculture. The actual supervision is carried out by officers of the Royal Canadian Mounted Police and operated for the first time during the racing season of 1921. Statistics are available from the year 1924 and are shown in Table 17 for the Dominion as a whole, while Table 18 shows the operations by provinces for the year 1935.

Section 11.—The Tariff Board.*

The Tariff Board was constituted by Act of Parliament in 1931 (c. 55, 21-22 Geo. V). It consists of three members, a Chairman, a Vice-Chairman and a member, and a Secretary, all appointed by the Governor in Council.

The constitution and duties of the Board are defined in two parts of the Act of 1931.

Under Part I, the Board makes inquiry into and reports upon any matter on which the Minister of Finance desires information, in relation to any goods which, if brought into Canada or produced in Canada, are subject to or exempt from duties of customs or excise. The investigation into any such matter may include inquiry as to the effect which an increase or decrease of the existing rate of duty upon a given commodity might have upon industry or trade, and the extent to which the consumer is protected from exploitation.

It is also the duty of the Board to inquire into any other matter or thing in relation to the trade or commerce of Canada which the Governor in Council sees fit to refer to the Board for inquiry and report.

The Act provides that reports shall be made to the Minister of Finance, and tabled in the House of Commons. The principal commodities reported on are: wool textiles; boots and shoes; jute yarns and twines; fruits and vegetables; hookless fasteners (zippers); wooden doors; silver-bearing articles (toiletware); dextrines; rabbit skins; brass, copper and nickel-silver commodities; boiler tubes; skelp; coco-mats and mattings; hats and hoods; biscuits; and cork boards, slabs and planks. In the year 1936 reports were made on crude petroleum and its derivatives; the automobile industry; artificial silk yarns; paper-board containers; forged steel rolls; cotton yarns and farbrics, etc.

Part II of the Act empowers the Board to hear and decide appeals from rulings made by the Department of National Revenue with respect to fair market value of goods for duty purposes, erroneous appraisals, and the rate of duty applicable to any class of goods. Under Order in Council the Board has authority and power, (1) to declare or find with respect to any importation whether any goods are "of a class or kind made or produced in Canada"; (2) to review the value for duty applied by the Customs to new or unused goods under provisions of Section 36 of the Customs Act and make its findings with regard thereto; (3) to determine and declare whether any and, if so, what drawback of Customs duty is payable under the provisions of Schedule B of the Customs Tariff. Findings of the Board on Appeals are published in the *Canada Gazette*.

Section 12.—Dominion Trade and Industry Commission.†

The Dominion Trade and Industry Commission was constituted by Act of Parliament in 1935 (c. 59, 25-26 Geo. V). It consists of three Commissioners one of whom is the Chief Commissioner and another the Assistant Chief Commissioner. The Act provides that for the time being the members of the Tariff Board (see Section 11) shall be the Commissioners, and the Chairman and Vice-Chairman of the Tariff Board shall be the Chief Commissioner and Assistant Chief Commissioner, respectively.

Duties of the Commission consist of investigating and recommending the prosecution of offences against Acts of Parliament relating to commodity standards;

* Contributed by James R. MacGregor, Secretary, Tariff Board.

† Revised by James R. MacGregor, Secretary, Dominion Trade and Industry Commission.

preparation of draft specifications for commodity standards; application of the national trademark "Canada Standard" to commodities which conform to specifications established under any Act of Parliament; investigation of complaints respecting unfair trade practices, and recommending the prosecution of offences against any Dominion law prohibiting unfair trade practices; the convening of conferences for the purpose of considering commercial practices prevailing in industry, and determining what practices are unfair or undesirable in the interest of the industry or the public.

Section 13.—The National Employment Commission.*

In accordance with the National Employment Commission Act, 1936, the personnel of the National Employment Commission was appointed by the Dominion Government early in 1936 and the Commission held its first meeting on June 1, 1936. Since that date the Commission, which is advisory in nature except where specific administrative duties may be allocated to it by the Governor in Council, has actively studied the various problems specified by the Act as coming within its purview, and has made its recommendations for action to the Government as decisions on specific problems were reached.

Under the Act, the Commission was first instructed to carry out a national registration and classification of unemployed persons in receipt of relief. This registration was commenced in September, 1936, arrangements being made to receive monthly returns from that time. Two reports, summarizing the data collected, were tabled by the Minister of Labour in the House during the 1937 session and further information, as tabulated, will shortly form the basis of periodical reports for the information of the public.

The Commission at the same time sent out a questionnaire for completion by employers; the Dominion Bureau of Statistics co-operated by making available its list of employers with more than fifteen employees each—this group covering about 40 p.c. of all employees in the industrial field. The response received was almost complete and very thorough, and, from the answers received, a great deal of data valuable to the Commission is being obtained.

Other problems of the Commission fall into two main categories, those dealing with re-employment measures, including public works programs, and those dealing with the administration of relief, e.g., as to conditions which should be attached to Dominion grants-in-aid to Provincial Governments, and as to co-ordination of governmental and voluntary measures for providing relief to unemployed persons. In both cases special consideration is indicated for problems affecting women and youth.

Additionally, the Commission is specifically directed in the Act to report upon plans for the establishment of an apprenticeship system, and upon long-range plans of national development which might be used to ameliorate the effects of any future depression. The latter are now under consideration; the studies on apprenticeship have been completed and a report on this matter made to the Government.

In the field of re-employment the Commission's work has been aided by the general recovery which has taken place in primary and secondary industry, and therefore efforts were first directed to stimulating activities in two special fields:—

First, in the residential construction field, for which purpose the Home Improvement Plan was launched late in 1936 (see page 475). This Plan is providing an accelerating stimulation to alterations, renovations, and repairs of all descriptions as

* Contributed by Arthur B. Purvis, Chairman, National Employment Commission, Ottawa.

the months go on, not only from the proceeds of loans granted by the chartered banks under the Home Improvement Act, 1937, but to a much greater extent from cash expenditures and from loans privately secured from lending institutions by citizens who have been influenced towards home repair work by the wide publicity campaign instituted by the Commission in co-operation with industry. The effect on employment conditions in the building and allied trades has already been marked. Consideration has also been given by the Commission to co-operative efforts for low-rental housing measures designed primarily to assist those unable to pay an economic rent.

Secondly, the Commission's recommendation for an extended Farm Improvement and Employment Plan (whereby single unemployed men and women were placed on farms during the difficult winter months) was accepted by the Government. At a relatively low cost 46,961 men and women were so placed in co-operation with the provinces during the winter of 1936-37. This was against comparative figures of 14,808 in 1933-34, 12,208 in 1934-35, and 14,020 in 1935-36, under somewhat similar plans.

Supplementary plans were instituted in several provinces providing additional employment for 6,784 persons unsuited to farm work.

In the field of unemployment relief administration and co-ordination the Commission has made detailed recommendations to the Government which are now receiving consideration. Such recommendations look particularly to the avoidance of the indiscriminate granting of unemployment relief, and favour co-ordinated efforts to improve the degree of employability of those on relief by suitable and adequate training and reconditioning programs in various localities. The interests of youth and women have had special consideration in this connection.

Section 14.—Other Miscellaneous Administration.

In previous editions of the Year Book this chapter has been brought to a close with outlines of Dominion Government administration as follows: the International Joint Commission; the Geodetic Survey of Canada; the Topographical Survey; the Dominion Observatories.

The three latter services were, up to the end of 1936, administered by the Department of the Interior but, as will be seen from the outline of Dominion legislation (under the heading "Civil Service") p. 1046, the newly-organized Department of Mines and Resources, which came into effect on Dec. 1, 1936, absorbed the old Departments of Mines, Interior, Indian Affairs, and Immigration. The Geodetic Survey and the Dominion Observatories administrations are continued as Divisions of the Surveys and Engineering Branch of the new Department, but topographical survey work has been re-organized, the mapping work having been combined with the Hydrographic Service as a Division of the Surveys and Engineering Branch, and the topographical survey work taken over by the Bureau of Geology and Topography of the Mines and Geology Branch.

The organization of the new Department of Transport (see p. 631) has made it advisable to recast the material of Chapter XVIII, pp. 630 to 729.

The purpose of establishing the above-mentioned new Departments was to correlate the efforts of the staffs of such older Departments as had, in the course of time, acquired overlapping features, or which could be more economically administered under one head without impairing the usefulness of necessary services.

CHAPTER XXIX.—SOURCES OF OFFICIAL STATISTICAL AND OTHER INFORMATION RELATIVE TO CANADA.

The chief source of information on the current state of the country is the Dominion Bureau of Statistics, organized as the central statistical bureau for Canada, and described in the first part of this chapter; a list of its publications, which cover almost the whole field of the national statistics, is given in Section 1.

The second section of the chapter contains a list of the Acts of Parliament administered by the several Departments of the Dominion Government, and the third section a bibliography of the publications of these Departments. This is followed, in Section 4, by a bibliography of the publications of Provincial Governments.

Section 1.—The Dominion Bureau of Statistics.*

The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43).† The Act was a consolidation of all previous statistical legislation and was based on the report of a Commission on Statistics, appointed in 1912, which recommended (a) a series of specific reforms and enlargements in Canadian statistics, and (b) a policy of statistical co-ordination for the Dominion, under central direction. In 1915, following the recommendations in this report, the office of Dominion Statistician was created.

The Bureau has been constituted by the transfer or absorption, by Orders in Council, of the following work and branches: (1) the Census and Statistics Office (covering the census, and also agriculture, general manufactures, and judicial statistics), (2) Fisheries Statistics, (3) Mining Statistics, (4) Forestry Statistics, (5) Dairying and Fruit Statistics, (6) Water- and Electric-Power Statistics, (7) the Railways and Canals Statistical Branch of the Department of Railways and Canals (8) the Trade Statistical Branch (Exports and Imports), (9) Grain Trade Statistics, (10) Live-Stock Statistics, (11) Prices Statistics, and (12) Employment Statistics. In addition four new branches were created, dealing respectively with Public Finance, Internal Trade, Vital Statistics, and Education. Subsequently the statistical activities of the Fuel Controller and the Board of Commerce were absorbed. Modifications of the Bankruptcy, Public Health and Railway Acts, and of the regulation *re* franking privileges were also made, with a view to facilitating the collection of statistics.

The Bureau has completed the plans for a unified, nation-wide statistical system, covering every important phase of social and economic activity, and has carried them out to a considerable degree.

The main achievement of the Bureau has been in the organization of the several subjects in correlation with each other in accordance with this general plan, and the consequent establishment of a comprehensive viewpoint of the country as a "going concern". In addition, there has been created what is frequently called a central "thinking office" in statistics, continuously in touch with general conditions and the line of probable developments.

* A more complete account of the formation and activities of the Bureau of Statistics will be found on pp. 961-964 of the 1922-23 Year Book.

† Consolidated as the Statistics Act (c. 190, R.S.C., 1927).

The final concept in the organization of the Bureau of Statistics is that of a national laboratory for social and economic research. Statistics are not merely a record of what has been, but are for use in planning what shall be; it is the duty of a statistical bureau to assist directly in the day-to-day problems of administration, as well as to provide their theoretic background. One of the most significant of recent developments in administration is the extent to which statistical organization has been increased as a guide to national policy. Though its usefulness has only begun, the Dominion Bureau of Statistics has laid the foundations for a service comparable with the increasingly important position taken by Canada in the economic and political world.

Publications of the Bureau.—The first annual report of the Dominion Statistician contained a full description of the organization of the Bureau and of its subject matter.* The main Branches of the Bureau are as follows: I. Administration; II. Demography—Census and Vital Statistics; III. Agricultural Statistics; IV. Fisheries, Furs, Animal and Dairy Products; V. Mining, Metallurgical and Chemical; VI. Forestry and Allied Industries; VII. General Manufactures; VIII. External Trade (Imports and Exports); IX. Internal Trade; X. Transportation and Public Utilities; XI. Financial Statistics; XII. Judicial Statistics; XIII. Education Statistics; XIV. Census of Institutions; XV. General Statistics. The publications of the several Branches are as follows:—

ADMINISTRATION—

Annual Report of the Dominion Statistician. *Price 10 cents.*

POPULATION—

I. CENSUS—

(A) Report of the Seventh Census of Canada, 1931:—

Vol. I. General—Administrative Report of the Seventh Census followed by a summary of the leading facts of the Censuses of Population and Agriculture, Institutions, Merchandising and Service Establishments, etc., and cross-analyses relating thereto. The Appendix gives a complete bibliography of census materials and reproduces the more salient figures for specified years, chronologically arranged, back to 1605. The volume also contains a series of life tables for the Dominion and each province. *In course of preparation.*

Vol. II. Population by Local Subdivisions—Conjugal condition, racial origin, religion, birthplace, year of immigration, language, literacy, school attendance, etc. *Price, Cloth \$1.50, Paper \$1.*

Vol. III. Ages of the People—Classified by sex, conjugal condition, racial origin, religion, birthplace, language, literacy, year of immigration, naturalization, etc. *Price, Cloth \$1, Paper 75 cents.*

Vol. IV. Birthplace, Racial Origin and Year of Immigration of the People—Cross-classified and classified by conjugal condition, naturalization and citizenship, religion, language, literacy, school attendance. *Price, Cloth \$1, Paper 75 cents.*

Vol. V. Families, Dwellings and Earnings—Cross-classified by birthplace, conjugal condition, year of immigration, naturalization and citizenship, racial origin, religion, language, literacy, school attendance. *In course of preparation.*

Vol. VI. Unemployment—Classified by industry, occupation, cause, age, sex, conjugal condition, period of idleness, birthplace, racial origin, year of immigration. *Price, Cloth \$1, Paper 75 cents.*

Vol. VII. Occupations and Industries—Cross-classified by birthplace, race, age, sex, etc. *In course of preparation.*

Vol. VIII. Agriculture—Agricultural population, farm holdings and land area, tenure, value of farm property and farm products, acreage and yields of crops, live stock, mortgage indebtedness and farm expenses, farm machinery, facilities and roads, co-operative marketing, etc.

* This report for the year ended Mar. 31, 1919, is now out of print.

POPULATION—continued.*I. CENSUS*—continued.*(A) Report of the Seventh Census of Canada, 1931*—concluded.

Vol. IX. Institutions—Hospitals for the Sick—Type, bed capacity, facilities, movement of patient population, personnel, capital investment, maintenance, receipts and expenditures, etc.; Mental Hospitals—Movement of patient population and their psychoses, age, nativity, racial origin, economic condition, conjugal condition, environment, literacy, religion, administration and personnel, etc.; Charitable and Benevolent Institutions—Type, movement of population, finances, inmates, age, sex, administration and personnel, etc.; Penitentiaries and Corrective and Reformatory Institutions—Inmates, offences, sentences, age, birthplace, citizenship, racial origin, previous employment, environment, educational status, conjugal condition, social habits, overseas service, administrative staff, receipts and expenditures. *Price, Cloth \$1, Paper 75 cents.*

Vols. X and XI. Merchandising and Service Establishments—Retail merchandise trade cross-classified by kind of business, type of operation, size of business, employees, salaries and wages, capital investment, rent and other operating expenses, credit, etc.; wholesale trade cross-classified by type of establishment, kind of business, operating expenses, etc.; with special reports on retail trade in urban and rural areas, chain stores, food retailing, drug stores, hotels, moving picture theatres, co-operative marketing and purchasing, etc. *Price, Cloth \$1, Paper 75 cents.*

Vols. XII and XIII. Census Monographs—Consisting of a series of studies of such outstanding Canadian problems as Growth of Population in Canada; Age Distribution of the Canadian People; Fertility of the Population; Origin, Language, Birthplace and Nationality of the Canadian People; Illiteracy and Educational Status; The Racial and Urban Composition of the Canadian Population since Confederation; The Canadian Family—Its Composition, Size and Condition from the Earliest Times; Housing and Rentals; Dependency; The Evolution and Present-Day Significance of the Canadian Occupational Structure; Unemployment; The Population Basis of Agriculture; Official Life Tables; Graduated Tables; Probabilities Referring to Occupations, Earnings, etc.

AGRICULTURE.—

Prince Edward Island—Farm population, areas, tenure, values, facilities and live stock; value of field crops, vegetables, fruits and forest products. *Price, 25 cents.*

Nova Scotia—Farm population, areas, tenure, values, facilities and live stock; value of field crops, vegetables, fruits and forest products. *Price, 25 cents.*

New Brunswick—Farm population, areas, tenure, values, facilities and live stock; value of field crops, vegetables, fruits and forest products. *Price, 25 cents.*

Quebec—Farm population, areas, tenure, values, facilities and live stock; value of field crops, vegetables, fruits and forest products. *Price, 25 cents.*

Ontario—Farm population, areas, tenure, values, facilities and live stock; value of field crops, vegetables, fruits and forest products. *Price, 25 cents.*

Manitoba—Farm population, areas, tenure, values, facilities and live stock; value of field crops, vegetables, fruits and forest products. *Price, 25 cents.*

Saskatchewan—Farm population, areas, tenure, values, facilities and live stock; value of field crops, vegetables, fruits and forest products. *Price, 25 cents.*

Alberta—Farm population, areas, tenure, values, facilities and live stock; value of field crops, vegetables, fruits and forest products. *Price, 25 cents.*

British Columbia—Farm population, areas, tenure, values, facilities and live stock; value of field crops, vegetables, fruits and forest products. *Price, 25 cents.*

(7) Villages of Manitoba, Saskatchewan, and Alberta. (8) Villages of Quebec. (9) Cities, Towns and Villages. (10) Maritime Provinces by Federal Electoral Districts. (11) Ontario by Federal Electoral Districts. (12) Prairie Provinces by Federal Electoral Districts. (13) Quebec by Federal Electoral Districts. (14) British Columbia by Federal Electoral Districts; Yukon and Northwest Territories. (15) Canada by Provinces. (16) Cities replacing Census Bulletins 1, 2, 3, 5 and 6. (17) Towns replacing Bulletins 1, 2, 3, 5, 6 and 9. *Final Bulletins.*—(I) New Brunswick. (II) Nova Scotia. (III) Manitoba. (IV) Canada by Provinces. (V)

POPULATION—continued.

I. CENSUS—continued.

(B) *Bulletins of the Seventh Census of Canada, 1931—continued.*

(1) POPULATION—concluded.

Saskatchewan. (VI) Alberta. (VII) Quebec. (VIII) Ontario. (IX) British Columbia. (X) Prince Edward Island. (XI) Rural and Urban Population. (XII) Yukon and Northwest Territories. (XIII) Cities, Towns and Villages in Canada, by Provinces. (XIV) Religions, by Provinces. (XV) Birthplaces, by Provinces. (XVI) Ages, by Provinces. (XVII) Conjugal Condition, by Provinces. (XVIII) School Attendance and Literacy, by Provinces. (XIX) Radio Sets in Canada, 1931. (XX) Population of Canada, 1931, by Provinces, Electoral Districts and Subdistricts. (XXI) Population of Canada, 1931, by Religious Denominations. (XXII) Population of Canada, 1931, by Racial Origins. (XXIII) Immigrants by Years of Arrival in Canada. (XXIV) Number and Percentage of Single, Married, Widowed or Divorced of the Total Population, by Sex and Provinces, 1911, 1921, and 1931. (XXV) Age Distribution by Single Years of Age for Canada, by Provinces, 1931. (XXVI) Immigrant Population Classified by Sex, Country of Birth, Province of Residence, Years of Arrival in Canada, and Citizenship of the Foreign Born, 1931. (XXVII) Gainfully Employed Ten Years of Age and Over, Classified According to Occupation and Sex for Cities of 30,000 and Over, 1931. (XXVIII) Birthplace of the Population Classified According to Nativity of Parents for Canada and Provinces, 1931. (XXIX) Canadians and other Nationals. (XXX) Gainfully Employed Ten Years of Age and Over for Canada and Provinces, 1931. (XXXI) Literacy, Language Spoken, and Conjugal Condition of the Population Ten Years of Age and Over, 1931. (XXXII) Earnings Among Wage-Earners for Canada and Provinces, 1931. (XXXIII) Ages of the Gainfully Employed Ten Years of Age and Over, for Canada and Provinces, 1931. (XXXIV) Religious Denominations by Racial Origins, 1931. (XXXV) Gainfully Employed Ten Years of Age and Over by Industry and Sex for Canada and the Provinces, and for Cities of 30,000 and Over, 1931. (XXXVI) Age Distribution by Five-Year Age Groups for Cities, Towns and Villages of 5,000 Population and Over, 1931. (XXXVII) Population of the Municipal Wards of Montreal City by Quinquennial Age Groups, Conjugal Condition, Birthplace, Racial Origin, Religion, School Attendance and Literacy, by Sex, 1931. (XXXVIII) Houses and Dwellings. (XL) Population of the Municipal Wards of the Cities of Toronto, Vancouver, Winnipeg, Hamilton, Quebec, and Ottawa by Quinquennial Age Groups, Conjugal Condition, Birthplace, Racial Origin, Religion, School Attendance and Literacy, by Sex, Census of 1931. (XLI) Orientals, Ten Years of Age and Over, Gainfully Employed by Race, Occupation and Sex, in British Columbia, 1931. (XLII) Persons Speaking Gaelic. (XLIII) Blind. (XLIV) Deaf Mutes. (XLV) Racial Origins of Gainfully Occupied, Ten Years of Age and Over for Canada and the Provinces. (XLVI) Birthplaces of Gainfully Occupied Ten Years of Age and Over, for Canada and the Provinces, 1931. (XLVII) Conjugal Condition of Gainfully Occupied Females, Fifteen Years of Age and Over, for Canada and the Provinces, 1931. UNEMPLOYMENT AMONG WAGE-EARNERS.—(I) Saint John, N.B.; (II) Winnipeg, Man.; (III) Kitchener, Ont.; (IV) Ottawa, Ont.; (V) Vancouver, B.C.; (VI) Hamilton, Ont.; (VII) Calgary, Alta.; (VIII) Toronto, Ont.; (IX) Montreal, Que.

- (2) AGRICULTURE.—*Preliminary Bulletins.*—(1) Number of Occupied Farms, by Counties or Census Divisions, 1931 and 1921; and the Number of Vacant or Abandoned Farms, 1931. Preliminary Acreage:—(1) Prince Edward Island; (2) New Brunswick; (3) Saskatchewan; (4) Manitoba; (5) British Columbia; (6) Ontario; (7) Nova Scotia; (8) Quebec; (9) Alberta; (10) Canada. Live Stock by Counties:—(11) Prince Edward Island; (12) Nova Scotia; (13) New Brunswick. (14) Ontario Preliminary Acreage, by Counties. (15) Manitoba Live Stock, by Census Divisions. (16) New Brunswick Preliminary Acreage, by Counties. (17) Alberta Live Stock, by Census Divisions. (18) Saskatchewan Live Stock, by Census Divisions. (19) British Columbia Live Stock, by Federal Electoral Districts. (20) Quebec Live Stock, by Counties. (21) Ontario Live Stock, by Counties. Farm Holdings, by Size, for Provinces, Counties or Census Divisions. Farm Facilities, by Provinces. Total Number of Farms, Farm Tenure, Farm Acreage, Farm Values, Mortgage Debt and Farm Expenses, by Provinces. Farms Reporting Live Stock, by Kinds and Total Number of Animals Reported for Each Kind. Area and Yield of Field Crops, 1930 and 1920:—(22) Prince Edward Island; (23) Nova Scotia; (24) New Brunswick; (25) Ontario; (26) Quebec. Live Stock on Farms by Provinces. Tenure of Farm Lands, by Provinces, Counties or Census Divisions. Number of Farm Workers, Weeks and Cost of Hired Labour, 1930. Fruit Trees on Farms, by Provinces, 1931 and 1921. Vegetables:—Area in 1931 and Area, Production and Value in 1930, by Provinces. *Final Bulletins.*—Animal Products on Farms, by Counties:—(I) Prince Edward Island; (II) Nova Scotia; (III) New Brunswick; (IV) Manitoba;

POPULATION—concluded.**I. CENSUS—concluded.****(B) *Bulletins of the Seventh Census of Canada, 1931—concluded.***

(V) Saskatchewan; (VI) Alberta; (VII) Ontario; (VIII) Quebec; (IX) British Columbia. Live Stock on Farms, by Counties—(X) Prince Edward Island; (XI) Nova Scotia; (XII) New Brunswick; (XIII) Manitoba; (XIV) Saskatchewan; (XV) Alberta; (XVI) British Columbia; (XVII) Ontario; (XVIII) Quebec. (XIX) Tenure, Farm Values, Farm Facilities and Mortgage Debt, 1931, and Farm Expenses for 1930, by Counties or Census Divisions. (XX) Stock Sold Alive, Stock Slaughtered, Young Animals Raised, 1930, and Pure-Bred Live Stock on Farms, 1931, by Counties or Census Divisions. (XXI) Pure-Bred Live Stock on Farms and Elsewhere, 1931. (XXII) Fruit Trees, 1931, Maple Products, 1931, Fruit Production and Value, 1930. (XXIII) Greenhouse and Hothouse Establishments on Farms and Elsewhere, by Provinces, 1931, 1921. (XXIV) Forest Products of Farms, by Counties or Census Divisions, 1930. (XXV) Condition of Farm Land, by Counties or Census Divisions, 1931. (XXVI) Area of Field Crops, by Counties or Census Divisions, 1931.

(C) *Bulletins of the Quinquennial Census of the Prairie Provinces, 1936:—*

Preliminary Bulletins.—(I) Population of Certain Cities, Towns and Villages. (II) Population of Certain Cities, Towns and Villages. (III) Population of Certain Cities, Towns and Villages and Electoral Districts. (IV) Population of Certain Electoral Districts, Towns and Villages. (V) Number of Occupied and of "Vacant" or "Abandoned" Farms in Certain Electoral Districts. (VI) Population of Certain Electoral Districts and Cities, Towns and Villages. (VII) Area under Field Crops in 1936 in Certain Electoral Districts. (VIII) Population of Certain Electoral Districts and Cities, Towns and Villages. (IX) Population of Rural Municipalities in the Provinces of Manitoba, Saskatchewan, and Alberta. (X) Population of Certain Electoral Districts and Cities, Towns and Villages. (XI) Number of Occupied and of "Abandoned" or "Vacant" Farms in Certain Electoral Districts. (XII) Population of Certain Electoral Districts, Rural Municipalities, Cities, Towns and Villages. (XIII) Population of Electoral Districts in the Provinces of Manitoba, Saskatchewan, and Alberta. (XIV) Preliminary Announcement of Unemployment and Employment among Wage-Earners, in Cities and Towns of 5,000 Population and Over. (XV) Area under Field Crops in the Prairie Provinces 1936 and 1931. (XVI) Number of Live Stock on Farms on June 1, 1936, in the Prairie Provinces. (XVII) Preliminary Announcement of Unemployment and Employment among Wage-Earners in Urban Centres of 1,000 to 5,000 Population. (XVIII) Preliminary Announcement of Unemployment and Employment among Wage-Earners in the provinces of Manitoba, Saskatchewan, and Alberta. (XIX) Number of Farms in the Prairie Provinces by Census Divisions. *Final Bulletin.*—Population by Townships, Rural and Urban, by Census Divisions, Ages, Sex, Conjugal Condition, Birthplace, Racial Origin, Official Language, Immigration, School Attendance, Literacy.

(D) *Reports of the Census of Institutions:—*

(1) Annual Report on Mental Institutions, 1935. (2) Directory of Hospitals, 1935. (3) Report on Penitentiaries and Reformatories, 1936. (4) Report on Charitable Institutions, 1936. (5) Report on Tuberculosis Institutions, 1936.

II. INTERCENSAL ESTIMATES OF POPULATION.**III. VITAL STATISTICS.**

Annual Report on Vital Statistics of Canada by Provinces and Municipalities, *Price \$1*; Preliminary Annual Report on Vital Statistics of Canada; Preliminary Quarterly Report on Vital Statistics of Canada; Monthly Report of Births, Deaths, and Marriages registered in Cities; Special Report on Contributory Causes of Death, 1926; Order of Birth in the Registration Area of Canada, 1925; Manual of the International List of Causes of Death, Revision of 1929; Special Report on Mortality in Canada from Cerebral Hæmorrhage and Certain Diseases of the Heart, Arteries and Kidneys, 1921-32; Special Report on Mortality in Canada According to Place of Residence, 1930-32; Special Report on Mortality from Tuberculosis in Canada According to Place of Residence, 1930-32; Special Report on Births in Canada According to Place of Residence of Mother, 1930-32; Special Report on Mortality in Canada, 1921-32; Handbook on Death Registration and Certification, containing International List of Causes of Death.

PRODUCTION—

I. ANNUAL SURVEY OF PRODUCTION.

Including and differentiating gross and net—(1) Primary Production (agriculture, fishing, furs, forestry and mining), (2) Secondary Production, or General Manufactures, Custom and Repair, and Construction, and (3) Provincial and Per Capita Analyses, Explanation of Method, *Price 15 cents.*

II. AGRICULTURE.

- (1) *Agricultural Production*—Monthly Bulletin of Agricultural Statistics with Index. *Price, \$1 per year.* (The official record of current statistical data relating to agriculture. Contains reports on agricultural conditions, prices, weather, etc.—estimates of areas, yields, quality and value of field crops—value of farm lands—wages of farm help—number and values of farm live stock and poultry—statistics of fruit and floriculture—dairying—tobacco—hives and honey—maple syrup and sugar—clover and grass seed—miscellaneous crops—stocks of grain—annual summary of value of agricultural production—index numbers of agricultural prices, yields and values—international agricultural statistics). Table of Contents and Index of Monthly Bulletin of Agricultural Statistics. Reprinted from the Monthly Bulletin of Agricultural Statistics:—(a) Canadian Trade in Farm Products, 1926-27; (b) The Fertilizer Trade in Canada; (c) Farm Expenditures in Alberta and Saskatchewan, 1934; (d) Fruit Statistics of Canada, 1926-35. Advance Summaries of Agricultural Statistics. Telegraphic Crop Reports (between June 1 and Sept. 1, weekly for the Prairie Provinces and every two weeks for the rest of Canada). Agricultural Statistics by Counties and Crop Districts. Annual Fruit Statistics. Advance Summaries on Fruit Conditions, Yields, etc. Handbook of Instructions to Crop Correspondents, and Summary of Annual Agricultural Statistics. *Mimeographed Reports, Annual:* Field Crop Acreages and Live Stock Numbers at June 1. Crop Reports—released on dates listed in the Crop-Reporting Program covering: (a) Intentions to Plant Field Crops; (b) Winter-killing and Spring Condition of Fall Wheat, Fall Rye, and Hay and Clover Meadows; (c) Progress of Spring Seeding; (d) Acreage, Condition, Yield, Stocks on Hand, and Value of Field Crops. Fruit and Vegetables—condition reports, estimates of production and value. (See also Census of Agriculture under "Population".)
- (2) *Grain and Grain Products*—(a) Annual Report on the Grain Trade of Canada, *Price 50 cents;* (b) Preliminary Report on the Grain Trade of Canada, *Price 25 cents;* (c) Monthly Review of the Wheat Situation, *Price \$1 per year;* (d) Canadian Grain Statistics—(Weekly report on grain supplies and movements); (e) Canadian Milling Statistics—(Monthly); (f) List of Mills with Capacity; (g) The Grain Situation in Argentina—(Monthly); (h) The Production and Distribution of Canadian Grains and Seeds—(1) Barley, (2) Oats, (3) Rye, (4) Flaxseed; (i) World Trade in Barley; (j) World Shipments of Wheat and Wheat Flour, 1926-27 to 1931-32; (k) World Trade in Wheat, *Price 25 cents;* (l) The Routing of Canadian Grain for Export; (m) Salient Features in the Grain Situation in Canada; (n) Trends in World Wheat Acreage, with graphic appendix.
- (3) *Live-Stock and Animal Products*—(a) Annual Report on Live-stock and Animal Products Statistics, *Price 25 cents;* (b) Monthly Reports on Cold Storage Holdings in Canada (1) Meat and Fish, (2) Dairy and Poultry Products, (3) Apples, Pears, Small Fruits, and Vegetables; (c) Monthly Reports on Stocks of Butter, Cheese, and Eggs in the Principal Cities of Canada; (d) Monthly Estimates of Production of Butter and Cheese; (e) Annual Estimates of the Consumption of Meats, Poultry, Butter, Cheese and Eggs; (f) Annual Report on Dairying Statistics of Canada; (g) Annual Survey of Live Stock and Poultry at Dec. 1; (h) Annual Summary of Cold Storage Holdings; (i) The Dairy Situation in Canada.
- (4) *Other*—Monthly Report on Raw and Refined Sugar (visible supply, meltings, shipments, exports and imports). Annual Summary of Sugar Reports. Annual Report on Commercial Tobacco Production. Annual Report on the Agricultural Situation and Outlook (published in co-operation with the Department of Agriculture) with Supplements as follows: (a) The Potato Situation in Eastern Canada, 1935; (b) Production Trends and Policies in Agriculture, 1936; and (c) Charts, 1937. Report of the Conference on Agricultural Statistics, Ottawa, Mar. 30-April 2.

III. FURS.

Annual Report on Fur Farms, *Price 35 cents.* Advance Bulletin of Statistics of the Production of Raw Furs, *Price 10 cents.* Annual bulletin on the Production of Raw Furs (comprising the pelts taken by trappers and those sold from fur farms), *Price 25 cents.*

PRODUCTION—continued.

IV. FISHERIES.

Annual Report of Fisheries Statistics, *Price 35 cents*. Advance Bulletins of Fish Caught and Marketed, by Provinces: Prince Edward Island, *Price 10 cents*; Nova Scotia, *Price 15 cents*; New Brunswick, *Price 15 cents*; Quebec, *Price 15 cents*; Ontario, The Prairie Provinces: and Yukon, *Price 15 cents*; British Columbia, *Price 15 cents*; Canada, *Price 25 cents*.

V. FORESTRY.

Annual Summary of the Value, etc., of Forest Production (includes operations in the woods for sawmills, shingle mills, pulp and paper mills, etc., production of mining timber, production of poles and cross ties, and farm production of firewood, posts, etc.), *Price 15 cents*.

[See also Reports on Manufactures of Forest Products listed under "Manufactures", Section VII, Subsection (5).]

VI. MINERAL PRODUCTION (MINING AND METALLURGY).

(1) *General*—(a) Annual Report on the Mineral Production of Canada, *Price 50 cents*; (b) Preliminary Reports (semi-annual) on the Mineral Production of Canada, *Price 25 cents*; (c) Monthly Reports on Leading Minerals—reports on gold, silver, lead, zinc, cobalt, nickel, copper, petroleum, gypsum, coal, cement, lime, clay, salt, asbestos, feldspar, etc.—*Yearly subscription 50 cents per report*; (d) Preliminary Estimate of Canada's Mineral Production, *Price 10 cents*.

(2) *Coal*—(a) Annual Report on Coal Statistics for Canada, *Price 25 cents*; (b) Monthly Summary Report on Coal and Coke Statistics for Canada, *Price 50 cents per year*; (c) Quarterly Report on Coal and Coke Statistics for Canada, *Price 50 cents per year*.

(3) *Annual Bulletins on Mining—Metals*—The Gold-Mining Industry in Canada (including alluvial gold mining, auriferous quartz mining, copper-gold-silver mining, and tables showing Canadian and world production of gold), *Price 25 cents*. The Silver-Mining Industry in Canada (including silver-cobalt-arsenic mining, silver-lead-zinc mining, and tables showing Canadian and world production of arsenic, cobalt, lead, silver, and zinc), *Price 25 cents*. The Nickel-Copper Mining, Smelting and Refining Industry (including Canadian and world production of nickel), *Price 25 cents*. The Copper-Mining Industry (including Canadian and world production of copper), *Price 10 cents*. Metals of the Platinum Group, *Price 10 cents*. The Production of Miscellaneous Metals (including antimony, beryl, bismuth, cadmium, chromite lithium, manganese, mercury, molybdenite, radium, selenium, tin, titanium, tungsten), *Price 15 cents*. The Non-Ferrous Smelting and Refining Industry, *Price 15 cents*. The complete Mining Series of Reports, with the exception of Coal, *Price \$4*.

Non-Metals—Abrasives, *Price 15 cents*, Asbestos, *Price 10 cents*; Feldspar and Quartz, *Price 10 cents*; Gypsum, *Price 10 cents*; Iron Oxides, *Price 10 cents*; Mica, *Price 10 cents*, Natural Gas, *Price 10 cents*; Petroleum, *Price 15 cents*; Salt, *Price 10 cents*; Talc and Soapstone, *Price 10 cents*; Miscellaneous Non-Metallic Minerals (including actinolite, barytes, bituminous sands, fluorspar, graphite, magnesitic-dolomite, magnesium sulphate, bog manganese, mineral waters, peat, phosphate, silica brick, sodium carbonate, sodium sulphate, sulphur—pyrites), *Price 15 cents*.

Structural Materials—Cement, *Price 10 cents*; Clay and Clay Products, *Price 15 cents*; Lime, *Price 10 cents*; Sand and Gravel, *Price 10 cents*; Stone, *Price 25 cents*.

[See also Reports on Iron and Steel and Their Products, Manufactures of Non-Ferrous Metals, and Chemicals and Allied Products, listed under "Manufactures", Section VII, Subsections (6), (7), (8) and (9).] All Mining, Metallurgical and Chemical reports (including reports under groups (6), (7), (8), and (9), pp. 1061-1062), *Price \$10 per year*.

VII. MANUFACTURES.

(1) *General*—General Report on the Manufacturing Industries of Canada, *Price 50 cents*. Geographical Distribution of the Manufacturing Industries of Canada, *Price 20 cents*. Also Reports for the Provinces and Leading Cities; Alphabetical List of Products (annual report); Quantity of Manufacturing Production in Canada, 1923-29; Consumption of Luxuries (annual report); Stocks and Consumption of Unmanufactured Tobacco (quarterly reports).

(2) *Manufactures of Vegetable Products*—General Report of Manufactures of Vegetable Products, *Price 50 cents*. Annual bulletins as follows: (a) Coffee, Tea, Spices and Miscellaneous Foods; (b) Fruit and Vegetable Preparation (including canning, evaporating and preserving, and pickles, sauces, vinegar and cider); (c) Flour and

PRODUCTION—continued.

VII. MANUFACTURES—continued.

(2) *Manufactures of Vegetable Products—concluded.*

Grist-Mill Products; (d) Bread and Other Bakery Products; (e) Biscuits and Confectionery, including Cocoa and Chocolate; (f) Macaroni and Vermicelli; (g) Liquors, Distilled; (h) Liquors, Malt; (i) Liquors, Vinous; (j) Rubber Goods and Rubber Boots and Shoes; (k) Prepared Breakfast Foods; (l) Sugar Refineries; (m) Tobacco Products; (n) Linseed and Soya Bean Oil; (o) The Canned Foods Industry; (p) Ice Cream; (q) Pack of Fruits and Vegetables (preliminary); (r) Barley and Its Production; (s) Mixed Feed Trade in Canada; (t) Stocks of Unmanufactured Tobacco on Hand (quarterly report).

(3) *Animal Products and Their Manufactures*—Annual Report as follows: The Dairy Factory Industry, *Price 25 cents.* Annual bulletins: (a) Slaughtering and Meat Packing and Sausage and Sausage Casings, *Price 25 cents;* (b) Leather Tanneries, *Price 25 cents;* (c) Miscellaneous Leather Goods, Leather Belting, Boot and Shoe Findings, Leather, *Price 25 cents;* (d) Leather Boots and Shoes, *Price 25 cents;* (e) Leather Gloves and Mitts, *Price 10 cents;* (f) Fur Goods, Fur Dressing, *Price 25 cents.* Monthly bulletin on Boot and Shoe Production, *Price 50 cents per year.* Monthly bulletin on Concentrated Milk Products, *Price 50 cents per year.*

[See also Reports on Live Stock, etc., listed under "Agriculture".]

(4) *Textile and Allied Industries*—General Report on the Textile Industries of Canada, *Price 50 cents.* Annual bulletins as follows: (a) Cotton Textiles (cloth, yarn, thread and waste); (b) Woollen Textiles (cloth, yarn, waste, carpets, etc., and woollen goods, *n.e.s.*); (c) The Silk Industry; (d) Clothing, Men's Factory; (e) Clothing, Women's, Factory; (f) Hats and Caps; (g) Hosiery and Knitted Goods; (h) Men's Furnishings, *n.e.s.*; (i) Oiled Clothing and Waterproofs; (j) Cordage, Rope and Twine; (k) Corsets; (l) Cotton and Jute Bags; (m) Dyeing, Cleaning and Laundry Work; (n) Dyeing and Finishing of Textiles; (o) Awnings, Tents and Sails; (p) Production and Consumption of Raw Wool in Canada, 1931; (q) Consumption of Wool, Tops and Yarns, 1932.

(5) *Manufactures of Forest Products*—Annual Reports, *Price 25 cents each:* (a) The Lumber Industry; (b) The Pulp and Paper Industry; (c) Wood-Using Industries; (d) Paper-Using Industries. Annual bulletins: (a) The Lumber Industry, *Price 25 cents;* (b) Lumber Distribution in Canada and the United States (biennial), *Price 25 cents;* (c) The Pulp and Paper Industry, *Price 20 cents.* Annual Preliminary Reports on Wood-Using Industries: (a) Planing Mills, Sash and Door Factories, *Price 20 cents;* (b) Hardwood Flooring, *Price 15 cents;* (c) Furniture, *Price 15 cents;* (d) Boxes, Baskets and Crates, *Price 15 cents;* (e) Carriages, Sleighs and Vehicle Supplies, *Price 15 cents;* (f) Cooperage, *Price 10 cents;* (g) Coffins and Caskets, *Price 10 cents;* (h) Sporting Goods, *Price 10 cents;* (i) Boat Building, *Price 10 cents;* (j) Lasts, Trees and Shoe Findings, *Price 10 cents;* (k) Handles, Spools and Woodturning, *Price 10 cents;* (l) Wooden-ware, *Price 10 cents;* (m) Excelsior, *Price 10 cents;* (n) Charcoal Manufacture, *Price 10 cents;* (o) Beekeepers' and Poultrymen's Supplies, *Price 10 cents;* (p) Miscellaneous Wood-Using Industries, *Price 10 cents.* Annual Preliminary Reports on Paper-Using Industries: (a) Printing and Publishing, *Price 25 cents;* (b) Printing and Bookbinding, *Price 25 cents;* (c) Lithographing, *Price 10 cents;* (d) Engraving, Electrotyping and Stereotyping, *Price 10 cents;* (e) Trade Composition, *Price 10 cents;* (f) Paper Boxes and Bags, *Price 15 cents;* (g) Blueprinting, *Price 10 cents;* (h) Roofing Paper, *Price 10 cents;* (i) Miscellaneous Paper Goods, *Price 10 cents.* The Printing Trades [combining (a), (b), (c), (d), (e), and (f)], *Price 15 cents.* Monthly bulletins: (a) Asphalt Roofing Production, *Price 50 cents per year;* (b) Asphalt Roofing Sales, *Price 50 cents per year;* (c) Rigid Insulating Board, *Price 50 cents per year.* Lumber Industry Series, *Price 50 cents;* Wood-Using Industries Series, *Price \$1.50;* Paper-Using Industries Series, *Price \$1.75.* Subscription price for all Forestry Branch publications \$3.

(6) *Iron and Steel and Their Products*—Biennial Report, *Price 50 cents.* Annual bulletins as follows: Preliminary Summary on the Iron and Steel Industry—(a) Primary Iron and Steel, *Price 15 cents;* (b) Castings and Forgings, *Price 15 cents;* (c) Boilers, Tanks and Engines, *Price 10 cents;* (d) Farm Implements and Machinery, *Price 15 cents;* (e) Automobile Parts and Accessories, *Price 15 cents;* (f) Automobile Statistics for Canada, *Price 25 cents;* (g) Railway Rolling-Stock, *Price 10 cents;* (h) Wire and Wire Goods, *Price 15 cents;* (i) Sheet Metal Products, *Price 10 cents;* (j) Hardware and Tools, *Price 10 cents;* (k) Bridge Building and Structural Steel, *Price 10 cents;* (l) Miscellaneous Iron and Steel Products, *Price 10 cents;* (m) Machinery, *Price 15 cents;* (n) Bicycles, *Price 10 cents;* (o) Iron and Steel and Their Products (final summary), *Price 10 cents.* Commodity bulletins on the production of pig

PRODUCTION—concluded.**VII. MANUFACTURES—concluded.****(6) Iron and Steel and Their Products—concluded.**

iron, steel, washing machines, cream separators, warm air furnaces, galvanized sheets, wire nails, wire rope and cable, steel wire, wire fencing, stoves, etc. Monthly Reports: (a) Pig Iron, Steel, and Ferro Alloys, *Price \$1 per year*; (b) Automobile Statistics for Canada, *Price \$1 per year*.

(7) *Manufactures of Non-Ferrous Metals—Biennial Report, Price 25 cents.* Annual bulletins as follows: (a) Aluminium Products, *Price 10 cents*; (b) Brass and Copper Products, *Price 15 cents*; (c) White Metal Alloys, *Price 15 cents*; (d) Jewellery and Silverware, *Price 15 cents*; (e) Electrical Apparatus and Supplies, *Price 25 cents*; (f) Miscellaneous Non-Ferrous Metal Products, *Price 10 cents*; (g) Non-Ferrous Smelting and Refining, *Price 15 cents*; (h) Manufactures of the Non-Ferrous Metals (final summary), *Price 10 cents*. Quarterly reports on production and sales of radio sets, *Price 50 cents per year*. Quarterly reports on sales of storage batteries, *Price 50 cents per year*. Commodity bulletins on the production of batteries, silverware, vacuum cleaners, electric motors and generators, electric transformers, incandescent lamps, etc.

(8) *Manufactures of the Non-Metallic Minerals—Biennial Report, Price 25 cents.* Annual bulletins as follows: Preliminary Summary on Manufactures of Non-Metallic Minerals—(a) Aerated Waters, *Price 15 cents*; (b) The Asbestos Mining Industry and the Asbestos Products Industry, *Price 15 cents*; (c) Cement, *Price 10 cents*; (d) Cement Products, *Price 10 cents*; (e) Coke and Gas, *Price 15 cents*; (f) Glass (blown, cut, and ornamental, etc.), *Price 10 cents*; (g) Lime, *Price 10 cents*; (h) Petroleum Products, *Price 25 cents*; (i) Clay Products, *Price 15 cents*; (j) Salt, *Price 10 cents*; (k) Sand-Lime Brick, *Price 10 cents*; (l) Stone (primary, monumental, and ornamental), *Price 25 cents*; (m) Abrasives, *Price 15 cents*; (n) Miscellaneous Non-Metallic Mineral Products (including carbon electrodes—gypsum products—mica products—non-metallic minerals, *n.e.s.*), *Price 10 cents*. Non-Metallic Mineral Products (final summary), *Price 10 cents*. Special Report on the Consumption of Coke in Canada, *Price 10 cents*. Monthly Report on Coke Statistics, *Price 50 cents per year*.

(9) *Chemicals and Allied Products—Biennial Report, Price 25 cents.* Annual bulletins as follows: Preliminary Summary on Chemicals and Allied Products—(a) Coal Tar Distillation, *Price 10 cents*; (b) Acids, Alkalies and Salts, *Price 10 cents*; (c) Compressed Gases, *Price 10 cents*; (d) Explosives, Ammunition and Fireworks, *Price 10 cents*; (e) Fertilizers, *Price 10 cents*; (f) Medicinal and Pharmaceutical Preparations, *Price 15 cents*; (g) Paints, Pigments and Varnishes, *Price 15 cents*; (h) Soaps, Cleaning Preparations and Washing Compounds, *Price 15 cents*; (i) Toilet Preparations, *Price 15 cents*; (j) Inks, *Price 10 cents*; (k) Adhesives, *Price 10 cents*; (l) Polishes and Dressings, *Price 10 cents*; (m) Wood Distillation, *Price 10 cents*; (n) Miscellaneous Chemical Products (including boiler compounds—cellulose products—insecticides—sweeping compounds—disinfectants—matches—dyes and colours—chemical products, *n.e.s.*), *Price 10 cents*. Special Report on the Fertilizer Trade in Canada, *Price 10 cents*. Commodity bulletins on Sulphuric Acid, Ammonium Sulphate, etc. Special Report—Directory of Chemical Industries in Canada, as of July 1, 1932, *Price 50 cents*. Special Report on the Consumption of Chemicals in Municipal Waterworks in Canada, 1934 and 1935, *Price 25 cents*.

(10) *Miscellaneous Manufactures—General Report.* Annual bulletins as follows: (a) Brooms, Brushes and Mops; (b) Musical Instruments (including pianos, organs, and phonographs) and Musical Instrument Materials and Parts; (c) Buttons; (d) Bed Springs and Mattresses.

NOTE.—For statistics of water power and central electric stations, see under heading "Public Utilities".

VIII. CONSTRUCTION.

Building Permits—Monthly and Annual Record, *Price \$1 per year*. Annual Report, The Construction Industry in Canada, *Price 25 cents*.

EXTERNAL TRADE (IMPORTS AND EXPORTS)—

(1) Annual Report of the Trade of Canada, for the fiscal year ended Mar. 31 (showing summary historical tables, analyses of current trends, detailed tables by items, group analyses according to component material, origin and degree of manufacture, and purpose, and comparisons of the volume of trade). *Price \$3.*

(2) Condensed Preliminary Report of the Trade of Canada, for the fiscal year ended Mar. 31. *Price 25 cents.*

EXTERNAL TRADE (EXPORTS AND IMPORTS)—concluded.

- (3) Annual Report of the Trade of Canada for the calendar year. *Price 50 cents.* (Free to subscribers to Quarterly Trade Report.)
- (4) Review of Canada's Foreign Trade during the calendar year. *Price 25 cents.*
- (5) Quarterly Report of the Trade of Canada (showing statistics of imports and exports by months and cumulative quarters). *Price \$2 per year.*
- (6) Monthly Summary of the Trade of Canada (for latest month and latest 12 months). *Price \$1 per year.*

CHAPTER XXX.—THE ANNUAL REGISTER, 1936-37.

Section 1.—Dominion Legislation, 1936.

Legislation of the First Session, Eighteenth Parliament,
Feb. 6, 1936, to June 23, 1936.

Finance and Taxation.—Six Appropriation Acts were passed during the session, *viz.*, cc. 1, 2, 13, 16, 17, and 50, all applying to the fiscal year ended Mar. 31, 1937. C. 1 granted \$33,862,485·15 towards defraying the expenses of the public service, being one-sixth of the amount of each of the items set forth in the Estimates for the said fiscal year, and an interim vote of \$2,102,381, being one-twelfth of the amount of each of the several items set forth in the Schedule to the Act. By c. 2, the sum of \$51,167,229·11 was granted against expenses of the public service not otherwise provided for as set forth in those Supplementary Estimates constituting the Schedule to that Act; it was provided, moreover, that, notwithstanding the provisions of the Consolidated Revenue and Audit Act, 1931, the amounts appropriated by c. 2 could be paid at any time on or before April 30, 1936. C. 13 granted \$21,860,190·57, being one-sixth of the amount of each of the items set forth in the Special Supplementary Estimates for the fiscal year 1936-37; \$2,418,809·33 to cover one-twelfth of the amount of each of the items of those Supplementary Estimates enumerated in Schedule A to that Act; \$315,683·33, being one-sixth of the amount of each of the items set forth in Schedule B (Supplementary Estimates); \$28,868·33 being one-third of the items of Schedule C; and \$4,801,637·44, being one-half of the amounts of each of the several items set forth in Schedule D. C. 16 provided for \$16,931,242·58, being a further one-twelfth of the amount of the Main Estimates partially covered by c. 1, and additional interim votes of \$371,958·33, being one-twelfth of the amount of each of the several items set forth in Schedule A appended to c. 16; \$75,866·66, being one-sixth of the amount of each of the several items set forth in Schedule B; \$265,605·75, being one-fourth of the amount of each of the several items set forth in Schedule C; \$4,233·33, defraying one-third of a certain charge and expense described in Schedule D; and \$9,200, covering one-half of the charges and expenses of the items set forth in Schedule E to the Act—all being items of the Main Estimates. By c. 17, an amount of \$10,930,095·28 was granted to provide for one-twelfth of the Special Supplementary Estimates, and an additional interim vote of \$33,333·33, being one-sixth of the amount of the items contained in the Schedule to that Act. C. 50 granted \$149,551,948·12, being the amounts of the Main Estimates outlined in Schedule A to that Act, less appropriations voted on account of each item in cc. 1 and 16; \$90,772,525·81, namely the amount of each of the several items of the Supplementary Estimates set forth in Schedule B less amounts previously voted in cc. 13 and 17; \$16,031,028·69 and \$11,265,959·09, being the amounts of additional Supplementary Estimates as set forth in Schedules C and D, respectively. Under c. 50, certain public works construction legislation passed in 1934 and 1935 was repealed and authority to pay certain obligations, incurred under unemployment relief legislation, out of the Consolidated Revenue Fund was cancelled: power was also given to raise a loan, up to \$200,000,000, for public works and general purposes, in addition to such sums as would be required to redeem treasury bills outstanding from time to time, prior borrowing powers under c. 49 of the Statutes of 1935 being allowed to expire.

By the Loan Act, 1936 (c. 41 of the Statutes), authorization was given to borrow up to \$750,000,000, such loan to be a charge upon the Consolidated Revenue Fund.

Bank of Canada.—The Bank of Canada Act (c. 43 of the Statutes of 1934) was amended by c. 22 primarily in regard to s. 17 of the original legislation. The capital of the Bank was increased from \$5,000,000 to \$10,100,000, divided into 100,000 Class A shares and 102,000 Class B shares, each class of share having a par value of \$50 and the whole of the Class B shares being held by the Minister of Finance on behalf of the Dominion and paid for out of the Consolidated Revenue Fund. The holder of the Class B shares is empowered to appoint, with the approval of the Governor in Council, six directors to the Board—two to hold office until 1940, two until 1941, and two until 1942—and at each annual meeting from 1940 onwards this registered holder can appoint two directors to hold office for a term of three years and to replace the directors then retiring. All directors are to have one vote except that, until the annual meeting of 1940, directors appointed by the Class B shareholder are entitled to two votes. Other amendments of minor importance are also made.

Income Tax.—C. 6 continues the levy of a special income tax on salaries of members of the judiciary, commissioned officers of the military, naval, and air forces, and the R.C.M.P. for the fiscal year ending Mar. 31, 1937, the rate being 5 p.c.

By c. 38, the ordinary rate of income tax on corporations is increased from 13½ p.c. to 15 p.c., but where returns are consolidated the rate is set at 17 p.c. in place of 15 p.c. as formerly. Non-resident-owned investment corporations are required to pay one-half the ordinary rate of tax unless they elect otherwise under s. 6, but dividends and interest paid by such corporations are not ordinarily to be taxed. The deductions from income to be allowed or disallowed to non-resident-owned investment corporations are stipulated under s. 12. Interest paid abroad by Canadian debtors in Canadian funds, except interest on Dominion bonds, is made subject to a tax of 5 p.c. Income derived from property transferred in trust is made liable to taxation. The interest rate on unpaid instalments of income tax is reduced from 6 p.c. to 5 p.c. and the penalty rate in respect to overdue tax from 4 p.c. to 3 p.c. S. 17 enables the Dominion Government to collect income taxes on behalf of the provinces and imposed by them. S. 20 amends Part XIII of the original legislation relating to metalliferous mines by granting exemption of tax for three years to such properties coming into production between 1936 and 1940.

National Revenue.—C. 19 amends the Customs Act (c. 42, R.S.C. 1927) chiefly as regards entries made by bill of sight, the interpretation of value for duty on new or unused goods imported, and gives the importer the right to appeal to the Tariff Board in certain cases. Amendments are also made with regard to unlawfully imported goods and penalties therefor. The Customs Act is also amended (c. 30) by requiring the master of any vessel arriving in Canadian waters or of any vessel registered or owned in Canada to have a manifest on board containing stipulated information. Certain vessels or classes of vessels are or may be exempted. The procedure of boarding, searching, and examining the manifest or cargo and the exercise of powers connected therewith are covered. By c. 31 amendments are made to Schedules A, B, and C of the Customs Tariff (c. 44, R.S.C. 1927) by striking out certain stated items in Schedules A and B of the original legislation, as subsequently amended, and adding the items specified in Schedules A, B, and C of c. 31.

The Schedule of the Excise Act (c. 52 of the Statutes of 1934) is repealed by c. 37 and another Schedule given is substituted therefor.

C. 45 is an amendment to the Special War Revenue Act. Part VII of this Act, relating to the stock transfer tax, is repealed, and a new Part substituted therefor.

The schedule of excise taxes to be imposed on change of ownership, whether by sale or otherwise, of bonds (except Dominion of Canada bonds) and shares, when purchaser resides in Canada, is laid down, and the Minister of National Revenue may affix a value where current market value is not established. The manner in which the tax is to be paid and recorded is also described and penalties are set for failure to comply with the legislation. Important changes in excise taxes on automobiles are outlined in Schedule I. A flat-rate tax of 5 p.c. on automobiles valued at \$650 is imposed in place of the 5 p.c. and 10 p.c. rates, with exemptions to Canadian manufacturers based on price and cost of production, formerly prevailing. In no case must the tax per automobile exceed \$250. Under s. 86 of c. 45, the sales tax is increased from 6 p.c. to 8 p.c. With a view to simplifying administration, certain materials consumed in the process of manufacture are rendered exempt.

Schedules II, III, and V of the original legislation, as subsequently amended, are repealed and Schedules II, III, and IV of this chapter are substituted, respectively, for each.

Agriculture.—Dominion guarantee of bank loans made under the Seed Grain Act, 1936, and the Local Improvement Districts Act, 1936, of Saskatchewan, are provided for by c. 9. The total loans guaranteed are not to exceed \$4,000,000, and the primary liability is on the province and such Dominion guarantee as is given is separate and successive thereto.

C. 12 authorizes and provides for the payment of a sum not exceeding \$6,600,000 to the Wheat Board for distribution to wheat producers of Manitoba, Saskatchewan, and Alberta in respect to deliveries of the 1930 crop to the Canadian Co-operative Wheat Producers Limited. The basis of payment is laid down in Schedules A and B appended to the legislation. Payments of credit balances in respect to barley, flax, and rye delivered in the crop year 1930-31 are also provided for as well as the discharge of claims against the Board when payment has been made.

C. 32 amends the Dairy Industry Act in details regarding the character and weight of butter and cheese manufactured or imported for sale.

Civil Service.—C. 8 is cited as the Salary Deduction (Continuance) Act, 1936, and continues the legislation outlined in c. 26, 1935 (see p. 1112 of the 1936 Year Book) for another year.

A new Department of the Civil Service, known as the Department of Mines and Resources, is provided for by c. 33, and the organization of the Department may be provided for by Order in Council and the positions filled by previous employees of the Department of the Interior, the Department of Immigration and Colonization, the Department of Mines, and the Department of Indian Affairs. The Department of the Interior Act and the Department of Immigration and Colonization Act are repealed and also stated sections of the Geology and Mines Act and of the Indian Act, which conflict with the organization as a separate Department of the Department of Mines and Resources.

The organization of a new Department of Transport is provided for under c. 34, by amending the Department of Railways and Canals Act (c. 171, R.S.C. 1927) by substituting the word "Transport" for the words "Railways and Canals" in the earlier legislation, and repealing the Department of Marine Act. In addition to Railways and Canals and Marine, the control and supervision of the Civil Aviation Branch of the Department of National Defence is transferred to the Minister of Transport, and control of Civil Aviation boards is to be vested in the Department of Transport. The organization of the Department may be provided for by Order

in Council and the positions filled by previous employees of the Departments of Railways and Canals, Marine, and the Civil Aviation Branch of the Department of National Defence.

Employment.—The National Employment Commission is established under c. 7 to find ways and means of providing remunerative employment and reducing the numbers on relief. The Commission is to consist of not more than seven members and its organization, powers and duties are outlined. The Commission functions under the direction of the Minister of Labour and may, among other duties, mobilize agencies for relief, recommend programs for the public works, report on measures for co-operation with commercial and industrial groups and the establishment of an apprenticeship system in industry, investigate methods to secure suitable employment for ex-soldiers, and explore long-range plans of national development. The appointment of a National Advisory Committee of industrial and social service organizations is provided for to assist the Commission.

C. 15 is the Unemployment Relief and Assistance Act, 1936, which continues for one year the work done under the previous Relief Acts of 1932, 1933, 1934, and 1935, and provides that the Governor in Council may, out of moneys appropriated by Parliament, authorize the execution, by persons on relief as far as practicable, of works and undertakings which the Governor in Council may determine to be in the general interest of Canada. Agreements may be made with any of the provinces or with corporations and individuals concerning relief measures and the increase of employment. The amount of provincial assistance granted to any province is strictly limited under c. 46, which is an amendment to c. 15.

The re-employment of former members of the Forces is the purpose of the Veterans' Assistance Commission Act, 1936 (c. 47 of the Statutes), under which the Veterans' Assistance Commission is established with necessary powers for this purpose. Among other duties, it is to co-ordinate and co-operate with the National Employment Commission in efforts towards the registration, classification and employment of veterans.

Justice.—The Criminal Code (c. 36, R.S.C. 1927) is amended by c. 29 regarding persons who may issue pistol or revolver permits, the interpretation of the term "seditious intention", procedure on appeals and trials in certain cases, theft and receiving stolen property and several other matters.

C. 39 amends the Judges Act (c. 105, R.S.C. 1927) as regards the classification and salaries of the judges of the Supreme Court of Ontario. A Chief Justice in Appeal is temporarily appointed and the number of High Court Judges is increased. The office of Chief Justice of the High Court with a salary of \$10,000 per annum, as in the cases of other Chief Justices, is also provided for.

The Juvenile Delinquents Act is amended by c. 40, chiefly in relation to the liability of adults, including parents and guardians, who contribute to such delinquency. It is no defence if the child does not actually become delinquent.

Parliamentary Representation.—The Dominion Franchise Act (c. 51, 1934) is amended by c. 4 to permit of the annual revision of the lists of electors being omitted for the year 1936.

The taking of Dominion by-elections and the manner of procedure, the supply of lists, etc., and forms of oath to be taken by the voter and the person vouching for the voter, are provided for by c. 35 and all matters regarding the registration of voters and the preparation and revision of lists for by-elections are dealt with in c. 36, which is an Act to amend, with regard to by-elections, the Dominion Franchise Act.

Pensions and Soldier Settlement.—Under c. 10, the time for additional credit on payments of arrears or instalments under the Soldier Settlement Act is extended to March, 1938.

The Pension Act (c. 157, R.S.C. 1927), as amended from time to time since 1927, is further amended by c. 44. The Governor in Council is empowered to appoint five additional *ad hoc* Commissioners to the Canadian Pension Commission if and as required, but each shall be appointed for a period not in excess of one year, although he may be re-appointed. Certain stipulations regarding such appointments are laid down. Provision is made for the attendance of a judge of a provincial Superior Court, for necessary periods, at sessions of the Pension Appeal Court. Such an *ad hoc* judge is vested with the powers of a member of the Court. Amendments are also made regarding the dates before which application must be made for disability pensions; adjustment of pension when pensioner is in receipt of relief or in case of retroactive increase of pension, continuance of pension to dependants on death of wife or widow of a pensioner, and many other matters regarding the procedure to be taken by, and the assistance to be given to, applicants for pensions or for appeal; the procedure on appeal; and the cancellation of pensions or non-payment of same under certain circumstances.

C. 48 amends the War Veterans' Allowance Act by the establishment of the War Veterans' Allowance Board to replace the Committee provided for in the original legislation (c. 48, 1930). Provision is made for members of the Board who, prior to appointment, were members of the public service, to become contributors to the Civil Service Superannuation Fund. Members who have served on the Board for stated periods and who are not entitled to superannuation may be granted pensions. The powers of the Board are enlarged and allowances may be made to veterans of 55 years of age (in place of 60) when incapable of self maintenance owing to disability, pre-ageing, etc. In case of suspension of payment of allowances for stated cause, the Board may continue payment in part to dependants.

Radio.—The Canadian Broadcasting Act, 1936, is the title of c. 24, which establishes, under the Minister of Transport, the organization and powers of the Canadian Broadcasting Corporation. The objects of the Corporation are defined in s. 8. Working capital and advances for capital works up to \$100,000 and \$500,000, respectively, may be advanced by the Minister of Finance to the Corporation. Licence fees collected from the public are to be deposited to the credit of the Corporation.

Trade and Commerce.—The Trade Agreement between Canada and the United States was given approval by c. 3. The Agreement is set out in fifteen Articles constituting the Schedule to the Act.

C. 28 amends the Copyright Amendment Act, 1931 (c. 8, 1931). Performances presumed to be given without private profit are more clearly defined; amendments are made to the section regarding tariffs of fees, charges, and royalties which are proposed to be collected, and a Copyright Appeal Board is constituted to consider statements and objections of such fees, charges or royalties, and the Board is empowered to make such alternative statements as it thinks fit and once statements have been approved, right of action is barred. Until Jan. 1, 1937, the Governor in Council may prescribe fees, charges or royalties.

Transportation.—*Railways.*—By c. 21 auditors for the year 1936 are appointed to make a continuous audit of the accounts of the Canadian National Railways under s. 13 of the Canadian National-Canadian Pacific Act, 1933. The latter Act is amended by c. 25, Part I being repealed and another Part substituted therefor,

which re-establishes a Board of Directors (seven in number) in place of three Trustees. The organization of the Board and its duties are specifically laid down. Annual reports are to be submitted to Parliament through the Minister of Transport.

C. 26 provides for the construction of about ninety-nine miles of Canadian National railway line from Senneterre to Rouyn in the province of Quebec at an estimated cost of \$5,940,000. The nature and form of securities and guarantees are to be decided by the Governor in Council and signed by the Minister of Finance, and construction contracts are to be let by tender. Pending the issue of guaranteed securities, advances from the Consolidated Revenue Fund may be authorized.

C. 27 authorizes the issue of notes for refunding and capital expenditures made during 1936 to the amount of \$9,959,000 made up of an amount not exceeding \$7,459,000 on account of equipment, and up to \$2,500,000 for construction and betterments. The Minister of Finance may make loans, secured by such notes, to the total sum named.

Shipping.—The Canada Shipping Act (c. 44, 1934) is amended by c. 23. The powers of pilotage authorities are widened in certain particulars, and under "Offences and Penalties" the punishable offences of pilots are re-defined. A new section is added on the application of load line provisions and several other amendments of a general nature are made.

Certain rules relating to bills of lading in connection with the carriage of goods by water are made effective under c. 49—the Water Carriage of Goods Act, 1936. These rules are detailed in the Schedule to the Act, and cover: risks; responsibilities and liabilities; rights and immunities; surrender of rights and immunities and increase of responsibilities and liabilities; special conditions; limitations on the application of the rules; and limitation of liability.

Harbours.—The Toronto Harbour Commissioners are empowered to borrow money from time to time to pay or redeem debentures, and to issue debentures for money so borrowed, under c. 11—the Toronto Harbour Commissioners' Act, 1936.

C. 42 is an Act respecting the National Harbours Board. The Board is given jurisdiction over the following harbours: Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal, and Vancouver, the boundaries of which are described in Schedule B to the Act, and over other Dominion works and property which may be transferred to the Board by the Governor in Council. The rights of employees under the Government Employees' Compensation Act and the Civil Service Superannuation Act are protected. The Board may acquire real estate either under the Expropriation Act or by other means when previously authorized by the Governor in Council; such property is to be vested in His Majesty in the right of the Dominion of Canada. Works executed under the direction of the Board must be by public tender except in stated cases.

The Board is empowered to enforce by-laws made by the Governor in Council for the management and control of property under its jurisdiction. Rates and tolls may be levied or commuted and power of seizure is vested in the Board in case of default or under certain other circumstances, the Board having a lien on any vessel in preference to all other claims except wages of seamen. Other powers of the Board and the manner of carrying them out and the payment of penalties are defined. The Minister of Finance may make advances from the Consolidated Fund, for working capital purposes, not exceeding at any time \$1,000,000, to be covered by certificates of indebtedness bearing interest. Procedure regarding the keeping of accounts and annual reports are also laid down. This legislation repeals the Quebec

Harbour and River Police Act and numerous Acts, or portions of Acts, mentioned in Schedule A.

Miscellaneous.—Chapter 19 of the Statutes of 1935, establishing the Economic Council of Canada, is repealed by c. 5.

Under c. 14, the Agreement of Mar. 30, 1920, with the city of Ottawa is extended for another year as from July 1, 1935.

The Insurance Act of 1932, as subsequently amended by later legislation, is revised (c. 18) by bringing a number of sections up to date in regard to minor matters.

The Indian Act is amended by c. 20, chiefly with regard to the powers of the Superintendent General who may make regulations relating to game, plant diseases, motor vehicles, etc., which, when officially published, are to have the same force as though enacted by statute. Penalties may be provided for violation or non-observance, and the regulations may provide for "incorporation by reference" of specific laws or regulations in force within any province of Canada. With regard to the election of chiefs, it is provided that in case of equality of votes the agent or person presiding shall have the casting vote. The subsections regarding the application of penalties for the selling of intoxicants, gambling, and drinking are repealed. Other amendments are of a minor nature.

The Nova Scotia and Prince Edward Island National Parks Act, 1936, is the title of c. 43. Lands described in the Schedule to the Act are set apart in Nova Scotia and Prince Edward Island as National Parks subject to the provisions of the National Parks Act (c. 33, 1930), and agreed upon additions may be made to the former park by proclamation.

Section 2.—Provincial Legislation.

The reader is referred to the different provincial authorities for information in this connection. It is felt that whatever is lost to those readers who are interested in having all provincial legislation brought together and listed under one head is more than offset by the information of more general interest which it has been possible to include in the limited space available, but which would otherwise have had to be omitted.

Section 3.—Principal Events of the Year.

Subsection 1.—The Economic and Financial Year, 1936.*

Constructive factors dominated the economic situation in Canada during 1936, and a greater measure of prosperity was enjoyed than in any year since 1930. Advances were recorded in most factors regarded as significant in the study of cyclical fluctuations.

Productive operations as measured by the index of the physical volume of business were about $9\frac{1}{2}$ p.c. greater than in the preceding year. The newsprint, mining, and power industries reached new high records, showing marked gains over 1935. The increase in the volume of manufactured goods was about 10 p.c. Despite lower yields for many crops, farm income rose to the highest level in six years. The expansion in productive operations in Canada was due in large measure to the growth of external demand, exports increasing by nearly 23 p.c., owing in part to the economic recovery in most of the principal countries. With a heavy carry-over of wheat and facilities for the production of minerals and other natural products on a large scale, Canada was in a position to share fully in the revival of international trade.

* Abbreviated from "Business Conditions in Canada, 1936", prepared by Sydney B. Smith, M.A., Dominion Bureau of Statistics.

Agriculture.—Unfavourable weather conditions during the growing season greatly reduced the production of field crops. Owing to the marked rise in prices, however, the pecuniary return was greater than in any year since 1930. It is estimated that, by the end of 1936, actual farm prices had risen from about 35 p.c. in 1932 to about 65 p.c. of the level in the base year of 1926, while prices for goods purchased by the farmer had not then risen above 1932 levels, that is, about 82 p.c. of the base level.

The wheat crop of 1936 was very high in grade and quality, partially offsetting the effect of the diminished production. The production of coarse grains and fodder crops declined from that of 1935, on account of the prevalence of drought over large areas of Canada. With production of potatoes about the same as in 1935, price levels advanced and were maintained during the year. The improved export demand was partly due to the decline of 17 p.c. in the crop of the United States.

There was further expansion in the sale of live stock off farms during 1936. Inspected slaughterings, as a measure of market supplies, showed expansion with the index recording a gain of nearly 18·5 p.c. Cattle slaughterings showed a gain of 11·1 p.c., while a much greater gain was shown in hog slaughterings, amounting to no less than 27 p.c. The production of creamery butter, owing to better feed supplies and favourable pasture conditions in dairy districts, and to greater diversion of milk to the creameries, reached a new record output of 250,292,677 pounds, an increase of approximately 9·4 million pounds or 3·9 p.c. over 1935.

Minerals.—Canada's mineral production valued at \$361,394,000 in 1936 showed a gain of 15·7 p.c. over 1935, the previous peak year. Increases in output of most mineral products and improved prices for several metals combined to bring about this maximum.

Canada's output of gold was double that of ten years ago, amounting to 3,735,000 fine ounces. Valued at \$35·03 per ounce, the production of gold was worth \$130,848,000, recording a gain of 13·2 p.c. over 1935. Canada's base metal producers enjoyed an exceptionally progressive year, aided by the steady improvement in the prices of copper, lead, and zinc and by the heavy demand for the metals in British and foreign markets. Production of nickel, lead, and zinc increased in both quantity and value, while copper output, although declining slightly in quantity, also had a higher value due to the rise in prices.

Non-metallic mineral developments were featured by notable gains in the output of asbestos, cement, coal, and natural gas.

Forestry.—Operations in the forestry group of industries were greatly expanded in the year 1936. The production of newsprint reached a new high point in history, being close to the practical limit of capacity, with a gain of 16 p.c. over the previous year. An unsatisfactory feature was the low price level which persisted in spite of the higher cost of operations. One of the features of the rise in operations of the forest industries was the increase in exports of forest products, in which lumber and newsprint played the leading roles. The forestry industry is one of the largest employers of labour, and working forces in logging showed a gain of 9·3 p.c., while both sawmilling and paper industries recorded advances of nearly 8 p.c.

Electric Power.—The year 1936 recorded a peak of electric production in the Dominion, the output showing a gain of 8·9 p.c. over the preceding year. The production of central electric stations, which supply over 90 p.c. of the electric power in Canada, was, in the last calendar year, 25,493 million kilowatt hours, the output in 1935 having amounted to 23,404 million kilowatt hours. The peak

annual production of electric power previous to 1935 was 21,160 million kilowatt hours—the figure for 1934.

Manufacturing.—Manufacturing operations gathered momentum during the year, the output having been greater than at any time since 1929. The gain over the preceding year was 10 p.c., indicating the extensive nature of the industrial recovery. The output of industries engaged in the production of producers' goods showed a gain of 8.1 p.c. The iron and steel industry is typical of this group and steel ingots recorded a gain of 18.4 p.c. over 1935; the increase in pig iron production was 13 p.c. The gain in the index of consumers' goods was also appreciable, being 9.2 p.c.

Construction.—Construction contracts awarded exceeded the total for 1935 by 1.4 p.c. Residential and industrial construction showed increases of 17.7 p.c. and 45.4 p.c., respectively, offsetting to a large extent the decline of 22 p.c. in business building. As a large number of industries are now operating at high levels, it is anticipated that the construction of industrial plants and extensions will shortly become a more important factor.

External Trade.—The substantial gain in external trade, especially in exports, was one of the chief constructive developments of the year. Total exports of merchandise showed an increase of 22.6 p.c., while a gain of 15.4 p.c. was shown in imports. The excess of exports over imports was large.

Several causes contributed to the wide expansion in the export trade of the Dominion during the year. One factor was the economic recovery which was practically world-wide. The circumstances surrounding the wheat trade were exceptionally favourable. The advance in wholesale prices in the last half of the year also added appreciably to the value of our trade.

Transportation.—Owing to the marked degree of mutual dependence existing between industries and the railways, the operating and financial records of the latter present a measure of industrial activity. Railway traffic in 1936, however, showed only a modest increase over the preceding year. The gain in carloadings over 1935 was 5.8 p.c. Gross operating revenues of the two principal systems indicated a gain of slightly more than 7 p.c. for the Canadian Pacific and 6.7 p.c. for the Canadian lines of the Canadian National.

Canal traffic showed a general advance in 1936, the traffic passing through the St. Lawrence canals during the period of navigation showing an increase of 21 p.c., while the gain in the traffic through the Canadian and American locks of Sault Ste. Marie was 45 p.c.

Employment and Unemployment.—Substantial recovery in industrial employment was recorded in the Dominion during 1936, in continuance of the advance apparent for nearly four years. The unadjusted index of employment, with 1926 equalling 100, rose from 104.6 on Dec. 1, 1935, to 110.1 on the corresponding date of last year. Since, in the past two years, there has been considerable diminution in the numbers engaged on the unemployment relief projects of the various governing authorities, the gains recently shown in the monthly employment surveys indicate a revival in business that is happily due to an increasing demand for commodities at home and abroad.

In manufacturing, the seasonally adjusted index increased by 3.1 p.c. to 108.1. In metal mining, the number of persons employed was at its maximum for the 15-year period of observation. The mining of coal and other non-metallic minerals

provided work during 1936 for a larger number of men than in the preceding year. Logging showed accelerated activity, the index standing at 265·7 on Dec. 1, 1936, when it was higher than at that date in any other year of the record. Employment in transportation improved slightly in 1936. The merchandising and service divisions reported substantial increases in their personnel, the latest reports showing a higher level of employment than for some years past; the advance was partly a result of a quickened tourist trade. The exception to the general revival was the construction industry in which the decline of relief operations accounted for the smaller volume.

Prices.—During the first half of 1936, the level of wholesale prices was not greatly altered, the steadiness characteristic of the two preceding years being continued. Several fundamental causes contributed toward raising the price level in the later months of the year. The worst drought in many years caused an advance in agricultural crop prices. The reduction in commodity stocks overhanging world markets, the transformation of the gold reserve position due in part to re-valuation, and expanding purchasing power accompanying business recovery were potent influences in raising the price level. The increasing expenditure for armament by most countries expanded the demand for many raw materials produced in Canada.

Throughout the decline, terminating in the early months of 1933, raw material prices had fallen more rapidly than those for finished products and the resulting contraction in primary producers' incomes affected business adversely. This disparity in respect of wholesale prices was eliminated in 1936, the index of raw and partly manufactured commodities having been 75·8 in November against 75·5 for fully and chiefly manufactured goods.

Banking.—Following a decline of nearly seven years, current loans placed by the chartered banks recorded moderate advances in the last half of 1936. The most important influences in the delay of the turning-point were the liquidation of indebtedness out of the increased profits of industry, the refinancing carried out by public bodies and other large institutions, and the restricted revenue from agricultural operations, which have absorbed in recent years nearly 30 p.c. of the total of strictly commercial loans and discounts granted in the Dominion. These influences, until the last six months of the year, continued to offset those making for an expansion in bank credit. Notice deposits at the end of December reached the highest level on record at \$1,548 million, as compared with \$1,526 million in January, 1929. With a progressive decline in loans and concurrent expansion in deposits, the banks were obliged to make heavy purchases of securities.

Public Finance.—According to the Budget of 1937, Dominion Government total revenues in the fiscal year ended Mar. 31, 1937, were estimated at \$452,123,000, which represented an increase of \$79,527,000 over 1936. Total expenditures for the same period were \$539,518,000, an increase of \$6,933,000 over the preceding year. Of this amount special expenditures came to \$80,429,000. The deficit amounted to \$87,395,000 as compared with \$159,989,000 in the preceding year. The net debt was estimated at \$3,093,495,000 at Mar. 31, 1937.

Subsection 2.—Other Principal Events of the Year.

The Throne.—The Dominion Representatives to the Coronation of His Majesty King George VI on May 12, 1937, consisted of the Right Hon. W. L. Mackenzie King, M.P., Prime Minister, President of the Privy Council and Secretary of State for External Affairs; the Hon. E. Lapointe, K.C., M.P., Minister of Justice; the Hon. T. A. Crerar, M.P., Minister of Mines and Resources; the Hon. C. A.

Dunning, M.P., Minister of Finance; the Hon. Ian Mackenzie, M.P., Minister of National Defence; the Right Hon. R. B. Bennett, K.C., M.P., Leader of the Opposition; the Hon. W. E. Foster, Speaker of the Senate; the Hon. Pierre F. Casgrain, Speaker of the House of Commons; and the Hon. Vincent Massey, High Commissioner for Canada in Great Britain. All Branches of the Defence Services were represented by a contingent of 334, all ranks. For the first time in history, the Coronation ceremonies were broadcasted from Westminster Abbey all over the world. Local celebrations were held in every part of the Commonwealth. New Canadian coins with the head of King George VI on the obverse side, and typical Canadian designs on the reverse were circulated in Canada following the Coronation ceremonies. After the Coronation, the following representatives of the Government of Canada took part in the Imperial Conference held in London from May 14 to June 15; the Right Hon. W. L. Mackenzie King, Prime Minister; the Right Hon. E. Lapointe, K.C., Minister of Justice; the Hon. T. A. Crerar, Minister of Mines and Resources; the Hon. C. A. Dunning, Minister of Finance; the Hon. Ian Mackenzie, Minister of National Defence; and the Hon. Vincent Massey, High Commissioner for Canada in Great Britain.

The Governor General.—His Excellency Lord Tweedsmuir, returned the official visit made by the President of the United States to the Governor General's quarters of the Citadel, Quebec, July 31, 1936, when he and Lady Tweedsmuir visited President Roosevelt at the White House, Washington, D.C., on Mar. 30, 1937.

Visiting Royalty.—Prince Chichibu, brother of the Emperor Hirohito of Japan, and the Princess Chichibu, visited Ottawa as the guests of His Excellency Lord Tweedsmuir, April 3 to April 5, 1937.

Provincial General Elections.—General elections not reported in the 1936 Year Book, took place in Manitoba and Quebec. These are referred to on p. 69 of this volume. In Quebec, the Hon. Adelard Godbout, became Premier on the resignation of the Hon. L. A. Taschereau, June 11, 1936, but at the general election which took place on Aug. 17, 1936, as indicated on page 69, the Union Nationale party under Maurice Duplessis, defeated the Liberals and M. Duplessis formed a government. A general election was held in British Columbia on June 1, 1937, at which the Liberal Government under the Hon. T. D. Pattullo was returned to power. A general election took place in Nova Scotia on June 29, 1937, when the Liberal Government under the Hon. A. L. Macdonald was returned to power.

Diplomatic Appointments.—Baron Robert Silvercrux, first Belgian Minister to Canada, presented his credentials to Lord Tweedsmuir on January 11, 1937.

Trade Agreements, etc.—During the year ended June, 1937, Trade Agreements were concluded with Uruguay, Germany and Haiti. An Exchange of Notes with Brazil continued, without interruption, former reciprocal trade relations between Canada and that country. The Canada-Polish Convention was brought into effect in August, 1936, and normal trade relations were re-established with Russia by Order in Council of September, 1936.

Particulars of these Agreements and changes in trade relations will be found at pp. 491-492 of this volume.

Subsection 3.—Obituary.

1936.—(See also pp. 1121-1122 of the 1936 Year Book.) May 7, Hon. Isidore N. Belleau, Lévis, Que., Retired Justice of the Superior Court. May 11, His Honour Trevor H. Grout, Brampton, Ont., Judge of the County Court of the County of Peel. May 13, Stewart E. Durling, Woodstock, N.B., M.L.A. for York. May 14,

Field Marshal Viscount Allenby, G.C.B., G.C.M.G., London, Eng., Commander of the British Forces in Egypt and Palestine during the Great War. May 18, Hon. Emile Fortin, M.D., Quebec, Que., Senator for De la Durantaye. June 5, Colin G. O'Brian, L'Original, Ont., late Judge of the County Court of the United Counties of Prescott and Russell. June 11, Hon. Francis Brooke Gregory, Victoria, B.C., retired Judge of the Supreme Court. June 14, Elihu James Davis, Toronto, Ont., former Provincial Secretary. Richard Purdom Fairbairn, Toronto, Ont., former Provincial Deputy Minister of Public Works. June 16, Alfred Fitzpatrick, O.B.E., Toronto, Ont., Founder of the Frontier College. June 28, F. W. Perras, Ottawa, Ont., M.P. for Wright, Que. July 2, George W. Dawson, Ottawa, Ont., former M.P. for Addington. July 6, Hon. P. J. Veniot, M.P., Bathurst, N.B., former Postmaster General and Premier of New Brunswick. July 14, Judge Green, Claresholm, Alta., former Judge of the District Court of Medicine Hat and Red Deer. July 17, J. D. McNiven, Victoria, B.C., former Deputy Minister of Labour for British Columbia. July 20, S. T. McCavour, Ottawa, Ont., former Comptroller of Currency, Department of Finance. July 21, Hon. Robert Rogers, Guelph, Ont., former Minister of Public Works. July 29, Hon. Alexander Casimir Galt, Winnipeg, Man., former Judge of the King's Bench Division for Manitoba. Aug. 3, Edwin Hawken, Ottawa, Ont., Assistant Deputy Minister of Marine, and Chairman, National Harbours Commission. Aug. 14, Hon. Joseph A. C. Ethier, Montreal, Que., former Chief Justice of the Montreal Circuit Court and former M.P. for Two Mountains. Aug. 26, J. Emile Tremblay, Ottawa, Ont., former Civil Service Commissioner. Aug. 29, George Simpson, M.B.E., Ottawa, Ont., Editor of Debates, House of Commons. Sept. 7, L. A. Giroux, Rochester, Minn., U.S.A., M.L.A. for Grouard, Alta. Sept. 19, Hon. Campbell Lane, Montreal, Que., former Judge of the Superior Court of Quebec. Oct. 6, Hon. Charles McDonald, Vancouver, B.C., Senator for Vancouver. Oct. 10, Peter McGibbon, M.C., M.D., Bracebridge, Ont., former M.P. for Muskoka. Professor Edward Ernest Prince, Ottawa, Ont., former Canadian Commissioner of Fisheries. Oct. 12, Dr. John Pease Babcock, Victoria, B.C., former Deputy Commissioner of Fisheries for B.C. Oct. 13, Archibald McGillivray, Winnipeg, Man., Deputy Minister of Public Works for Manitoba. Oct. 15, Hon. William Egbert, Calgary, Alta., former Lieutenant-Governor of Alberta. James Hill, Belleville, Ont., M.L.A. for East Hastings. Oct. 29, T. C. Norris, Toronto, Ont., member of the Board of Railway Commissioners and former Premier of Manitoba. Nov. 13, Hon. William S. Bullock, Roxton Pond, Que., M.L.C. for Wellington. Nov. 21, Robert Gordon, Halifax, N.S., former Deputy Provincial Treasurer of N.S. Nov. 26, Robert Dunn, Jr., Victoria, B.C., Provincial Deputy Minister of Mines. Nov. 28, Mr. Justice de Lorimier, Montreal, Que., Judge of the Supreme Court of Quebec. Dec. 1, Sir Arthur G. Doughty, Ottawa, Ont., Dominion Archivist Emeritus. Mr. Justice Wilfrid Mercier, Montreal, Que., Judge of the Superior Court. Dec. 8, Hon. J. L. Chabot, M.D., Ottawa, Ont., Member of the Privy Council and former M.P. for Ottawa. Dec. 14, George de M. Loy, Valleyfield, Que., former M.P. for Beauharnois. Dec. 17, Hon. Richard S. White, Montreal, Que., Senator for Inkerman. Dec. 19, Henri Dessaint, Ottawa, Ont., Superintendent of the Money Order Branch, Post Office Department. Dec. 21, Major Hayter Reed, Montreal, Que., former Deputy Superintendent General of Indian Affairs. 1937.—Jan. 11, Judge J. O. Lacroix, Montreal, Que., Judge of Court of Sessions. Jan. 14, William H. Collins, Ph. D., D.Sc., F.R.S.C., Ottawa, Ont., Chief Geological Consultant, Dept. of Mines and Resources. Jan. 22, William Ross, Toronto, Ont., former M.P. for Ontario South. Jan. 29, Hon. Charles Marcell, Ottawa, Ont., M.P. for Bonaventure and former Speaker of the House of

Commons. Jan. 30, George A. McQuibban, M.L.A., M.D., Toronto, Ont., M.L.A. for Wellington North. Jan. 31, Herbert E. Wilton, Hamilton, Ont., M.P. for Hamilton West. Feb. 14, Matthew McKay, M.P., B.A., L.D.S., D.D.S., Ottawa, Ont., M.P. for Renfrew North. Feb. 15, Major-General Sir Frederick Loomis, K.C.B., C.M.G., D.S.O., Montreal, Que., Commander of the Third Canadian Division in the Great War. Oscar Paradis, K.C., Ottawa, Ont., Chief Law Translator of the House of Commons. Feb. 16, Sir Rodmond P. Roblin, Hot Springs, Ark., U.S.A., former Premier of Manitoba. Feb. 18, Hon. H. C. Hocken, Toronto, Ont., Senator for Toronto. Feb. 24, Hon. Patrick Burns, Calgary, Alta., Senator for Calgary. Mar. 16, Thomas W. Caldwell, Ottawa, Ont., former M.P. for Victoria-Carleton, N.B. Mar. 17, Hon. P. C. H. Primrose, Edmonton, Alta., Lieutenant-Governor of Alberta. April 3, James Fraser Ellis, M.D., Ottawa, Ont., member of the Canadian Pension Commission and former Speaker of the House of Assembly of Nova Scotia. April 15, Harry B. Short, St. Petersburg, Fla., U.S.A., former M.P. for Digby-Annapolis Royal. May 4, Gordon C. Wilson, Dundas, Ont., former M. P. for Wentworth, Ont. May 8, Hon. George Bryson, Fort Coulonge, Que., M.L.C. for Inkerman, Que., and former Minister without Portfolio in the Quebec Legislature. May 11, Ferris Bolton, Brandon, Man., former M.P. for Lisgar. May 18, Andrew Halkett, Ottawa, Ont., former Marine Biologist, Department of Fisheries. May 24, George Taylor MacNutt, Stewiacke, N.S., former M.P. for Colchester. May 31, Dougald Kennedy, Grimsby, Ont., former M.P. for Kenora. June 4, Brigadier-General C. A. Smart, Westmount, Que., M.L.C. for Inkerman. June 10, Sir Robert Laird Borden, P.C., G.C.M.G., K.C., LL.D., Ottawa, Ont., former Prime Minister of Canada. June 15, George H. Van Allen, K.C., Rochester, Minn., U.S.A., M.L.A. for Edmonton, Alta.

Section 4.—Extracts from the Canada Gazette—Official Appointments, Commissions, etc.*

Lieutenant-Governors, 1936.—April 29, Eric Weige Hamber, Esq., B.A., of Vancouver, B.C.: to be Lieutenant-Governor of the Province of British Columbia, succeeding the Hon. John William Fordham Johnson, said appointment to take effect on the 1st day of May, 1936. Sept. 10, Philip Carteret Hill Primrose, Esq., Edmonton, Alta.: to be Lieutenant-Governor of the said Province of Alberta, to be effective as from Oct. 1, 1936. Sept. 10, Archibald Peter McNab, Esq., Regina, Sask.: to be Lieutenant-Governor of the said Province of Saskatchewan, to be effective as from Oct. 1, 1936. **1937.**—Mar. 20, John Campbell Bowen, Esq., Edmonton, Alta.: to be Lieutenant-Governor of the Province of Alberta. April 7, Robert Irwin, Esq., Shelburne, N.S.: to be Lieutenant-Governor of the Province of Nova Scotia, to be effective May 1, 1937.

Privy Councillors, 1937.—May 10, His Excellency Lord Tweedsmuir, G.C.M.G., Governor General of Canada; the Hon. Ernest Lapointe, K.C., Ottawa, Ont.: to be Members of the King's Privy Council for Great Britain.

Senators, 1937.—Jan. 9, John Wallace de Beque Farris, Esq., K.C., Vancouver, B.C.; Jan. 12, Hon. Adrian Knatchbull Hugessen, K.C., Montreal, Que.

New Members of the House of Commons, 1936.—Mar. 16, J. R. Kirk, elected for Antigonish-Guysborough, N.S.; June 8, Hon. S. F. Tolmie, elected for Victoria, B.C.; Aug. 5, R. Leduc, elected for Wright, Que.; Aug. 17, Dr. C. J. Veniot, elected for Gloucester, N.B.; Oct. 26, J. A. Pinard, elected for Ottawa East, Ont. **1937.**—Mar. 22, J. A. Marsh, elected for Hamilton West, Ont.; Mar. 22, P. E. Côté, elected for Bonaventure, Que.; April 5, R. M. Warren, elected for North Renfrew.

* This list is in continuance of that at pp. 1122-1131 of the 1936 Year Book.

Official Appointments, 1936.—May 8, Hon. John Babington Macaulay Baxter, Chief Justice of New Brunswick: to be the Administrator of the Government of the Province of New Brunswick during the absence of the Honourable the Lieutenant-Governor from May 28, 1936, to July 12, 1936. May 12, Captain W. J. Milne of Shediac, N.B.: to be a Pilot Commissioner and Secretary of the Pilotage District of Shediac, N.B., in place of Wm. A. Simpson, resigned. May 13, Arthur B. Purvis, Esq., Montreal, Que., Chairman; A. N. McLean, Esq., Black's Harbour, N.B.; Alfred Marois, Esq., Manufacturer, Quebec, Que.; Tom Moore, Esq., Ottawa, Ont.; Mrs. Mary M. Sutherland, Wells, B.C.; W. A. MacKintosh, Esq., Kingston, Ont.; and E. J. Young, Dummer, Sask.: to be members of the National Employment Commission. May 16, Dr. A. L. Clark, Dean, Faculty of Applied Science, Queen's University, Kingston, Ont.; Dr. A. Frigon, President, Quebec Electricity Commission and President, Corporation de l'Ecole Polytechnique de Montréal, Que.; Dr. J. C. Smith, Shawinigan Water and Power Company, Montreal, Que.; Dr. R. C. Wallace, President, University of Alberta, Edmonton, Alta.: to be members of the National Research Council for a period of three years, expiring Mar. 31, 1939. May 19, Dr. O. D. Skelton: to be Chairman of the Employment and Social Insurance Commission. June 4, Hon. Lawrence Arthur Dumoulin Cannon, a Puisne Judge of the Supreme Court of Canada: to be Deputy of His Excellency the Governor General. June 6, Major Hugh Spencer Relph, Ottawa, Ont.: to be Secretary of the National Employment Commission. Mrs. Helen Douglas Smith, Vancouver, B.C.: to be a Member of the Dominion Council of Health, pursuant to the Pensions and National Health Department Act, *vice* Mrs. T. W. Sutherland, Wells, B.C., to be effective June 2, 1936. July 2, Hon. James Emile Pierre Prendergast, Chief Justice of Manitoba: to be Administrator of the Government of the Province of Manitoba during the absence of the Lieutenant-Governor from July 10, 1936, to July 31, 1936. July 7, Clifford B. Reilly, Esq., K.C.: to be an *ad hoc* member of the Canadian Pension Commission as from July 1, 1936, to Aug. 5, 1936, and a member of the above Commission for a period of seven years from August 6, 1936. Brigadier-General Harold French McDonald, C.M.G., D.S.O., at present Executive Assistant to the Canadian Pension Commission: to be a member of the said Commission in place of Dr. Robert John Kee, for a period of seven years as from July 1, 1936, and also to be Chairman of the Commission for one year from Aug. 6, 1936. Robert John Kee, Esq., M.D., at present a Member of the Canadian Pension Commission: to be a Member of the Pension Appeal Court, as from July 1, 1936. Colonel Cyrus Wesley Peck, V.C., D.S.O.: to be an *ad hoc* Member of the Canadian Pension Commission for a period of six months. Colonel John Grant Rattray, C.M.G., D.S.O., to be Chairman; Lieutenant-Colonel Hugues Le Moyne de Martigny, Brigadier-General Alexander Ross, K.C., C.M.G., V.D., A.D.C., to be Members; Huntley M. Sinclair, Esq., M.A., to be Secretary; and Edouard Belleau, Esq., to be Assistant Secretary of the Veterans' Assistance Commission, to be effective until Mar. 31, 1937. July 9, Mrs. Sara Donohue Simard, of the city of Quebec, Que.: to be a Member of the Dominion Council of Health as from Aug. 1, 1936, *vice* Mrs. Amedée Trudeau, resigned. Aug. 7, Frederick William Riddell, Esq., Business Manager of the following named Corporations: Vancouver Harbour Commissioners; The Harbour Commissioners of Montreal; Three Rivers Harbour Commissioners; Quebec Harbour Commissioners; Chicoutimi Harbour Commissioners; Saint John Harbour Commissioners; Halifax Harbour Commissioners: to be Commissioner and President of the above-mentioned Corporations, pending the appointment of the National Harbours Board. Aug. 15, Hon. Patrick Kerwin, a Puisne Judge of the Supreme Court of Canada: to be Deputy of His Excellency the

Governor General. Sept. 9, Hon. John Alexander Mathieson, Chief Justice of Prince Edward Island: to be Administrator of the Government of the Province of Prince Edward Island during the absence of the Hon. George Debrisay DeBlois, Lieutenant-Governor of Prince Edward Island from Sept. 14, 1936, to Oct. 14, 1936. Sept. 10, Ralph Osborne Campney, Esq., Vancouver, B.C., Barrister-at-law; Col. Arthur Edouard Dubuc, Ottawa, Ont., Civil Servant, and Bennett John Roberts, Esq., Ottawa, Ont., Civil Servant: to be Members of the National Harbours Board. Mr. Campney to be Chairman, and Col. Dubuc to be Vice-Chairman respectively of the said Board. Samuel James Hungerford, Esq., Montreal, Que., Railway Executive: to be Chairman and Director of the Canadian National Railway Company for a term of three years. James Young Murdock, K.C., Toronto, Ont., Barrister-at-law, and Wilfrid Joseph Théophile Gagnon, Esq., Montreal, Que., Manufacturer: to be Directors of the Canadian National Railway Company for a term of three years. Herbert James Symington, Esq., K.C., Montreal, Que., Barrister-at-law: to be a Director of the Canadian National Railway Company for a term of two years. Donald Hugh McDougall, Esq., LL.D., Stellarton, N.S., Industrial Engineer, and Robert John Moffatt, Esq., Bradwell, Sask., Farmer: to be Directors of the Canadian National Railway Company for a term of one year. Leonard W. Brockington, Esq., Winnipeg, Man., Barrister-at-law; René Morin, Esq., Montreal, Que., General Manager, and Mrs. Nellie McClung, Victoria, B.C.: to be Governors of the Canadian Broadcasting Corporation for a term of three years. J. Wilfrid Godfrey, Esq., Halifax, N.S., Barrister-at-law; Captain the Rev. Alexander Vachon, Quebec, Que., Director of Chemical Research, and Col. Wilfrid Bovey, Montreal, Que., Barrister-at-law and Educationalist: to be Governors of the Canadian Broadcasting Corporation for a term of two years. Peter Thomas Coolican and Francis Everett Joliffe of the Post Office Department: to be representatives of Canada at the next Congress of the Postal Union of the Americas and Spain to be held in November, 1936, in Panama, Republic of Panama. Sept. 11, Hon. Clarence Decatur Howe, P.C.: to be Minister of Transport from the date of the coming into force of the Department of Transport Act, 1936. Valentine Irving Smart, Esq., B.A., Ottawa, Ont., Deputy Minister of Railways and Canals: to be Deputy Minister of Transport, effective as and of the date of the coming into force of the Department of Transport Act, 1936. To be Directors of the Bank of Canada: Robert McQueen, Esq., Economist, Winnipeg, Man., until the annual general meeting of the Bank in 1942; J. Leroy Holman, Esq., Merchant, Summerside, P.E.I., until the annual general meeting of the Bank in 1942; Auguste C. Picard, Esq., Manufacturer, Quebec, Que., until the annual general meeting of the Bank in 1941; Fred Magee, Esq., Fish Packer and Merchant of Port Elgin, N.B., until the annual general meeting of the Bank in 1941; George C. APPENDIX.

External Trade of Canada in the fiscal year 1936-37.

Preliminary figures of the external trade of Canada for the fiscal year ended Mar. 31, 1937, show a grand total trade of \$1,746,119,786, as compared with a figure of \$1,425,191,139 in the preceding year, or an increase of \$320,928,647. The increase in the imports was \$109,156,503. Domestic exports increased by \$212,151,489 and foreign exports decreased by \$379,345. Figures by industrial groups are given in the following table, where the figures of imports and exports may be compared with the totals given for previous years in the tables on pp. 524, 532-533 of this volume.

Imports and Exports of Canada, fiscal year ended Mar. 31, 1937.

Industrial Group.	Imports.
